BULLETIN No. 61

DECEMBER, 1931

Inspection of Agricultural Lime Products

By H. D. Haskins and H. R. DeRose

—————

This is the twentieth report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold, supplemented by comparative costs of units of effective oxides present. Definitions are given for the various lime products used in agriculture.

—————

Massachusetts State College

Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1931

By H. D. Haskins, Official Chemist, assisted by H. R. DeRose.

Manufacturers and Brands.

During 1931, seventeen firms registered for sale in Massachusetts twenty-five brands of agricultural lime and one of gypsum or land plaster. The products are grouped as follows:

Hydrated or slaked lime	12
Ground limestone	13
	25
Gypsum	1

The drawing of samples took place during the months of April, May and June in widely scattered localities in the State by the same sampling agents who drew the official fertilizer samples. Ten per cent of the sacks present were sampled by means of a tube which secured a core the entire length of the package. At least ten bags were sampled provided that number was present. It is believed, therefore, that the analyses which follow fairly represent the lime products which were sold in Massachusetts for agricultural purposes during the year. All of the products registered were analyzed, and it is believed that the list includes all of the lime products that were actually sold for application to the soil, with the exception of some of the local lime by-products such as gas-house lime which are exempt from registration.

Variations and Deficiencies in the Composition of Lime Products.

In Table I, devoted to hydrated limes, no serious deficiencies are shown. Two cases were noted where slight deficiencies in calcium oxide occurred. An overrun of magnesium oxide, however, more than made up for the calcium shortage, so that the neutralizing effect of the product was not impaired and there was no commercial shortage.

In Table II, devoted to ground limestone, no serious deficiencies are shown. The efficiency of some of the products could be materially improved, however, by finer grinding, as the rapidity with which ground limestone becomes available in the soil depends in a large degree upon the fineness of the product. As illustrating this point, Hartwell¹, former director of the Rhode Island Experiment Station, found that unsifted ground limestone (of which 56 per cent was finer and 44 per cent coarser than 80 mesh, 31 per cent was coarser than 40 mesh, and 12 per cent coarser than 20 mesh) was about 80 per cent as effective on mangels and carrots as was slaked lime used in amounts to furnish the same quantity of calcium and magnesium oxides as the limestone. On the other hand, that portion of the same limestone ground to pass an 80-mesh sieve showed an average effectiveness of 102 as compared with hydrated lime at 100.

Lime Definitions.

The following definitions of lime products used in agriculture were adopted as official by the Association of Official Agricultural Chemists at their meeting in November, 1931.

¹ Circular, Extension News Service, R. I. State College, Vol. 1, No. 6, Nov. 1914.

Quicklime, burned lime, caustic lime, lump lime, unslaked lime, are liming materials that have a high content of calcium oxide, with magnesium oxide, produced by heating suitable carbonates until substantially all the carbon dioxide has been eliminated.

Hydrated or slaked lime is the product obtained by treating quicklime with sufficient water or steam to combine with its oxides.

Air-slaked lime is the product obtained by exposing quicklime or hydrated lime to the atmosphere until partially carbonated.

Ground limestone is the product obtained by grinding calcareous or dolomitic limestone. Not less than seventy-five per cent (75%) shall pass a 100-mesh sieve. It shall contain calcium and magnesium carbonates equivalent to not less than ninety per cent (90%) of calcium carbonate.

Ground shell lime is the product obtained by grinding the shells of mollusks. Not less than seventy-five per cent (75%) shall pass a 100-mesh sieve. It shall contain calcium and magnesium carbonates equivalent to not less than eighty per cent (80%) of calcium carbonate.

Marl, ground shell marl, is the product obtained by grinding natural deposits of shell marl. Not less than seventy-five per cent (75%) shall pass a 100-mesh sieve. It shall contain calcium and magnesium carbonates equivalent to not less than eighty per cent (80%) of calcium carbonate.

Waste lime, by-product lime, is any industrial waste or by-product containing calcium or calcium and magnesium in forms that will neutralize acids. It may be designated by the prefixation of the name of the industry or process by which it is produced, i.e., gas-house lime, tanners' lime, acetylene lime-waste, lime-kiln ashes, calcium silicate, etc.

Gypsum, land plaster, or crude calcium sulfate, are products consisting chiefly of calcium sulfate. They may contain twenty per cent (20%) of combined water. (They do not neutralize acid soils.)

Explanation of Tables of Analyses.

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO_2). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked) or as burned lime (caustic or unslaked). It should be understood that all of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

"Pounds of effective oxides in one ton" represents the sum of the calcium and magnesium oxides in one ton of the lime product, assuming that both ingredients from this source will become readily available.

The calculations found in column "Cost of 100 pounds of effective oxides" are based on prices furnished by the producers.

Table II, "Pounds of effective oxides in one ton." In securing these data the degree of fineness to which the limestone has been ground is taken into consideration. On those products which are finely ground so that all of the material will pass through a 20-mesh sieve, it is assumed that all of the calcium and magnesium oxides will become available in the soil within a five-year period. On those products which will not wholly pass a 20-mesh sieve, it is assumed that the oxides in that portion which is coarser than 20-mesh will be only 50 per cent effective during the same period.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

In both tables the figures in parenthesis following the brand name show the number of samples collected and analyzed.

Seed Inspection

By F. A. McLaughlin and Margaret E. Nagle

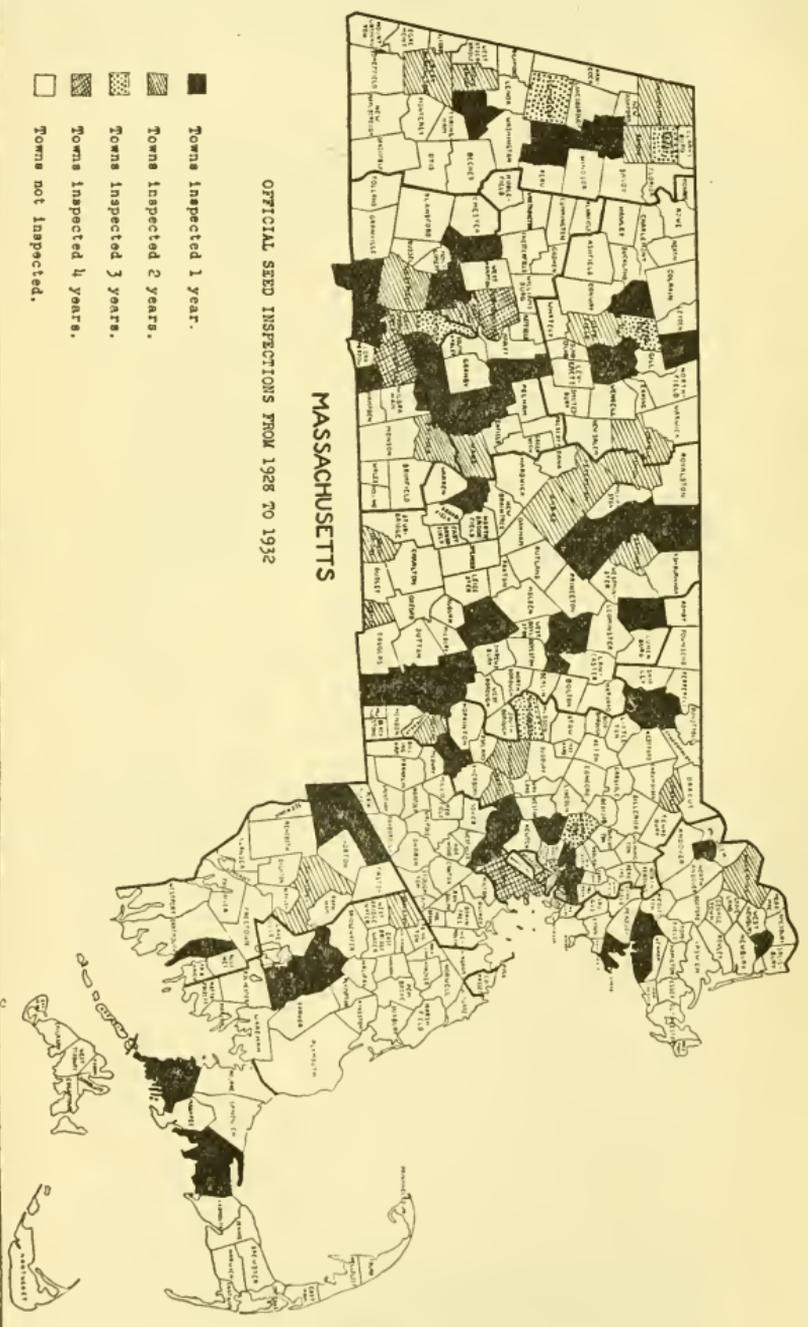

This Report, the fourth in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1931 by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274.)

MASSACHUSETTS STATE COLLEGE

OFFICIAL SEED INSPECTIONS FROM 1928 TO 1932

MASSACHUSETTS

SEED INSPECTION

By F. A. McLaughlin and Margaret E. Nagle

The first annual inspection of Massachusetts seed was conducted by the Commissioner of Agriculture in 1928. Since then inspections have been made each year—a total of four inspections since the Seed Law became effective November 1, 1927.

The accompanying map shows where inspections of dealers' stock have been made over this period of time. It will be noted that inspections have not been made in every town and city of the State, but that every year the larger centers of distribution have been covered and each year new territory has been added to that already worked. Progressively the entire State will be covered in this manner, and when this has been done it may be possible each year to cover larger portions of the State until finally each annual inspection may cover nearly, if not all, the State. In the meantime, the organization of inspection and laboratory facilities for analysis of samples collected may be perfected for handling the very much increased number of samples.

The number of samples of seed received by the Seed Laboratory has increased each year since 1928 when the laboratory was established. From October 1, 1930, to October 1, 1931, a total of 1135 samples of seed was received for analysis, germination, or both. The official samples collected by inspectors numbered 469; those sent in by seedsmen and farmers, 454; and by the Commissioner of Agriculture of Rhode Island, 212. This bulletin records analysis and germination of the official samples only. However, it includes also the results of field tests for trueness to type and variety of Alfalfa, Red Clover, Sweet Clover, Onions, and Peas. Professor Miles Cubbon of the Agronomy Department, Professor Grant B. Snyder of the Vegetable Gardening Department, and Professor O. C. Boyd, Extension Pathologist, cooperated with the Seed Laboratory in conducting these tests.

1931 Official Inspection of Agricultural Seeds

Explanation of Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Vetch, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F", what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, or excessive inert material, depending upon the column in which it is found.

(1) Date of test indicates that this seed was matured and marketed prior to August 1, 1930.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance," the sample is considered as made up of two component parts; (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus 20 per cent of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination (%)</i>	<i>Allowable Variation (%)</i>
90 or over.....	6
80 or over, but less than 90.....	7
70 or over, but less than 80.....	8
60 or over, but less than 70.....	9
Less than 60.....	10

Type and Variety Studies of Garden Peas, 1931

Conducted in Conjunction with the Department of Vegetable Gardening, M. S. C.

The field trials of garden peas included 32 varieties from 118 sources. The seed in all cases was purchased from the seed firm or grower. In conducting the trials every effort was made to maintain uniform cultural conditions. Comparisons of varieties and of strains of a given variety were fairly made.

In general the sorts included were fairly true in type for the variety designated by the seedsman. A few lots showed some variation in plant characteristics and in pod shape and size. For the most part, however, this was due not to seed mixture but rather to variation within the individual sort.

The tabular summary includes only the varieties and strains of which detailed records were taken. It was impossible to get such records in some cases because of heavy rains which flooded one portion of the test plot during the early part of the growing season.

Explanation of the Table

Stock Number. This is the seedsman's stock label or number.

Type Name. A large number of names are used in the seed trade which represent varieties that differ from one another in only a few minor characteristics. The type name used represents the most standard variety closely related to the sort tested.

Maturity Season indicates the approximate length of time required for the pods to develop to a marketable size.

1st Early.....	less than 52 days
Early.....	52 to 60 days
Main.....	60 to 70 days

Type of Plant and Pod includes all those factors usually considered as designating the characteristics of a given sort: plant height, growth habit, leaf, stem, flower, and pod.

Quality. Under this heading the color and taste of the peas were considered as well as the length of time they remained in an edible condition.

Very good—good color and taste, remained in edible condition a reasonable length of time.

Good—good color and taste, variable as to time factor.

Fair—good color, flat taste, hardened rapidly.

Poor—faded color, flat taste, hardened rapidly.

Rating. Each lot grown was evaluated from the standpoint of trueness to type and general performance. Uniformity of plant and pod maturity, filling out of pod, quality of pea, yield, disease, and type were especially considered.

Presence of Seed-Borne Diseases

Germination of the seed used for variety studies of garden peas was recorded from laboratory tests and also from duplicate lots planted in the field. Record of the laboratory germination appears in the preceding table, but no field tests are shown. Because of abnormally late planting, made necessary by the poor physical condition of the soil in the test plot, no fair comparison of results can be made. However, the field planting for germination and the permanent planting for variety tests, as well as the germination tests in the laboratory, gave opportunity to observe the presence and effect of seed-borne diseases upon field performance. Professor O. C. Boyd, Extension Pathologist, gives the following summary of his observations.

Laboratory Germination Test

1. Number of seed lots, 112; 200 seeds each.
2. Number of lots which showed the following conditions:
 - a. 8-25% of the seeds discolored, 15; 26-50%, 52; 51-75%, 33; 76-100%, 12.
 - b. Deep cotyledonary lesions: 26.
 - c. Soft rot of seeds: Light 16; medium 16; heavy 6.
 - d. Mold contaminations: Light 51; medium 29; heavy 22.
 - e. Blotch: Light 32; medium 18; heavy 12.
3. Organisms isolated from shallow cotyledon stains and lesions: Slow growing yellow and white bacteria; *Cladosporium* sp.; *Penicillium* sp.
4. Organisms isolated from deeper cotyledon lesions: *Fusarium* sp.; slow growing white and yellow bacteria; *Ascochyta pisi* (leaf and pod spotting fungus).

Field Germination Test

1. Number of seed lots which showed the following diseases when the plants were from four to six inches high:
 - a. Root rots (*Fusarium*, *Aphanomyces*), 47; pronounced, 5.
 - b. Wilts (*Fusarium*, et al.), 50; pronounced, 9.
 - c. Mosaic, 8.
2. Number of lots showing good stand, 38; medium, 25, poor, 46.
3. Kinds of organisms isolated from diseased plants: *Fusarium* sp.; *Aphanomyces* sp.; *Ascochyta pisi*; *Penicillium* sp.; *Pythium* sp.; slow growing yellow and white bacteria.

Field Permanent Planting

1. Number of lots that showed the following diseases:
 - a. Root rots (*Fusarium*, *Aphanomyces*), 26; pronounced, 8.
 - b. Wilt, (*Fusarium*, et al.) 16; pronounced, 5.
 - c. Undetermined blight, 9.
 - d. Mosaic, 12.
 - e. Leaf and pod flecking, 16; *Ascochyta* spot, 15.
 - f. Bacterial leaf and pod spot and stem blight, 2. (3 & 3A)

Relation Between Low Germination in Laboratory and Field Stand

There was not a consistent or direct relation between field stand and laboratory germination; yet, 80% of the lots that showed a germination of 70% or less in the laboratory also showed a correspondingly low stand in the field tests. The reverse, however, was not consistently true.

Occurrence of Seed-Borne Diseases¹

Lots from which were isolated the *Ascochyta* spot, *Fusarium* root-rot, and bacterial pod and leaf spot organisms, also showed prominent symptoms of those diseases in the field plantings.

It is believed that the "Undetermined Blight" disease which was prevalent in several lots of the permanent planting, may have been associated with one type of seed-coat stain and cotyledon lesion. It does not correspond to any of the known diseases of peas.

The symptoms of the bacterial leaf and pod spot disease which were present in two lots of the permanent planting were quite different from those of the well-known bacterial blight caused by *Bacterium pisi* (Sackett) EPS. It is believed to be a seed-borne disease that has not been described in this country.

The very characteristic "Blotch" spot on seed coats and cotyledons in the laboratory germination test appeared to have some relation to the occurrence of

¹ Isolations were made from only a few of each kind of disease observed in the laboratory and field tests.

root diseases in the field plantings. There is a possibility that it may be caused by *Cladosporium vignae*, the cause of a leaf and pod spot of cowpea.

Type and Variety Tests of Legumes

Conducted in Conjunction with the Department of Agronomy, M. S. C.

Plantings of red clovers, sweet clovers, and alfalfas were made July 2, 1930, in rod row areas. Growth was good in all cases except two, where weak germination was the main difficulty. Readings taken twice during the 1931 season showed the following:

ALFALFA		
Number	Name	Type Found
010 -G10	Grimm	Variegated (Grimm)
0129-G124	Grimm	Variegated
0131-G126	Grimm	Variegated
0140-G135	Common	Purple flowered (Common)

0154-G149	White Blossom	White Blossom, Biennial

Type and Variety Studies of Onions, 1931

Conducted in Conjunction with the Department of Vegetable Gardening, M. S. C.

The field trials of onions included 40 different named sorts from 29 sources, or 124 varieties and strains of varieties. The 1931 trials were conducted in a similar manner to those of 1930 which were reported in Control Bulletin 56, December 1930. The results of the trials, because of their similarity to the results of 1930, are not presented in detailed tabular form, but rather in a few brief summarized statements.

1. In general the lots were quite true in type and performance for the variety designated by the seedsman on his package.

2. The 1931 trials did not show as high a percentage of type mixtures as those of 1930, especially in whites and reds mixed with the yellows.

3. On a field performance basis, the yellow varieties of the Danvers and Southport Yellow Globe types are better adapted for Connecticut Valley culture than are the so-called mild varieties of the Spanish or Bermuda types.

4. Varieties of the Spanish and Bermuda types can be successfully grown in the Connecticut Valley. The onions, however, are not so mild as those grown in regions having a longer, cooler growing period. In the Connecticut Valley they can be grown for the local fall market, but they are not adapted for winter shipping, nor do they keep well in storage.

5. Much confusion exists in onion nomenclature because of the large number of synonymous sorts having distinct or different names.

Comparative Laboratory and Field Germinations of Onion Seed Used for Type and Variety Studies

In order to determine what germination may be expected of onion seeds sowed in the field, compared with laboratory germination of samples of the same seed, samples of each of the 124 varieties and strains of onions used for type and variety studies were germinated in the laboratory and in the field, 200 seeds being used for each test.

In the laboratory two methods were employed: between blotters for 10 days at 68° F.; in soil chambers containing sterilized soil for 14 days at 68° F.

For the field tests a typical onion soil was prepared in conformance with good crop practice, and the seeds were sown by hand in drills and covered with $\frac{1}{4}$ inch of soil. The seed had germinated sufficiently for final count at the end of 14 days. For the 21 days elapsing between the first sowing and the final counting of the last sample sown, the mean soil temperature was 70.4° F. and the mean atmospheric temperature was 64° F.

Only those seedlings were counted which might be expected to produce a crop of onions in the field.

The average of all germinations was:

	<i>Per cent</i>
Laboratory tests	
In blotters.....	70.66
In soil chambers.....	69.02
Field tests.....	62.47

It will be noted that there was only 1.64 per cent less germination in laboratory soil chambers than in blotters. This may be accounted for because of the added resistance of the soil. In the field the difference was more pronounced, being 8.19 per cent less than in blotters and 6.55 per cent less than in soil chambers. The difference between field germination in soil and laboratory germination in soil chambers cannot be accounted for merely through a difference in soil resistance. Some of the factors noted which were responsible for this difference were erosion of the soil by rain washing out of an occasional seed, throwing out of seed by worms, cutting off of seedlings by insects and fungi, burial of a seed beneath lumps of hard soil or small stones, etc. Factors such as those mentioned vary greatly in different seasons and even in different fields the same season. Consequently no figures are obtainable which will accurately represent expected field germination under all conditions. Assuming, however, that all factors taken into consideration during this field experiment represent the average for typical onion soils in this locality for the spring of 1931, field germination was approximately 8 per cent less than laboratory blotter germination.

Twelfth Annual Report on
Eradication of Pullorum Disease
in Massachusetts

By

H. Van Roekel, K. L. Bullis, O. S. Flint and Miriam K. Clarke

In this bulletin are reported the results of investigations concerning pullorum disease and its eradication. The object of the work here described is to gain more knowledge about the nature of this disease. This in turn will aid in the establishment and maintenance of pullorum disease-free flocks, which is the primary motive of our eradication program.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

TWELFTH ANNUAL REPORT ON ERADICATION OF PULLORUM DISEASE IN MASSACHUSETTS

1931-32

By H. Van Roekel, K. L. Bullis, O. S. Flint and Miriam K. Clarke¹

INTRODUCTION

In the eradication of pullorum disease, problems of great import have been encountered. The progress in eradication is greatly assisted by removing the various obstacles that impede our efforts. During the past few years, investigations have been made of some of these problems in order to bring about a more comprehensive understanding of pullorum disease, which should enable one to institute a more effective eradication program.

These investigations and the testing results for the 1931-32 season are reported in the following order:—

1. Antigen Studies.
2. Jellied Blood Samples.
3. Non-Infected Females May Contract Pullorum Disease through Eating Fresh Eggs Laid by Infected Hens.
4. Exposure of Pullorum Disease-Free Birds to Soil and Litter Contaminated with Feces from Positive Reacting Birds.
5. Dissemination of *S. pullorum* Infection Among Sexually Immature Females.
6. Pathogenicity of *S. pullorum* in Relation to Aves Other Than Chickens.
7. Agglutinins in Chicks.
8. Avenues of Infection.
9. Observations Concerning Diagnostic Tests for Pullorum Disease.
10. Intensive Testing Versus Annual Testing in Pullorum Disease Eradication.
11. Testing Results for the 1931-32 Season.

ANTIGEN STUDIES

As the application of the agglutination test in control and eradication of pullorum disease has become more and more general, numerous experiment stations and state laboratories have attempted to standardize their procedure with the best methods. Their experience has resulted in certain practices becoming established criteria in the treatment of cultures to be used for antigen and the treatment of the antigen after it has been made. In 1931, "Standard Methods of Diagnosis of Pullorum Disease in Barnyard Fowl" (69) were formulated and are in the process of adoption by the Conference of Official State and Federal Research Workers in Animal Diseases of America. The influence of two factors in the preparation and handling of antigen have been studied during the past two years; first, the effect of age upon the quality of concentrated and dilute antigen stored at 8° C.; and second, the danger that either too frequent transfer of stock cultures or their storage at low temperature may cause them to produce an inferior test fluid.

¹ Appreciation is extended to Dr. John B. Lentz, Head of the Department of Veterinary Science, for administrative assistance and for suggestions made concerning this bulletin.

The Technique Used in Making the Antigen

The method of making antigen has changed since the first application of the test by Jones (52), as reported in 1912. In his early work he used an antigen prepared by incubating the culture for 72 hours and used a saline solution containing 0.6 per cent sodium chloride and 0.5 per cent phenol for washing off the growth, and then inspissated the washings for 2½ hours at 60° C.; but later (53) he stated that the heated antigen was less satisfactory and also changed the saline solution to 0.88 per cent sodium chloride. Gage, Paige, and Hyland (36) incubated inoculated agar slants one to two days and shook the washings for one-half hour in a mechanical shaking machine before the suspension was filtered through cotton. This, with the omission of the shaking, was essentially the method used by Rettger, Kirkpatrick, and Jones (76). Gwatkin (40) incubated the inoculated agar for four days, standardized the turbidity by Gates' method, and used phenol as a preservative. Brunett (10) incubated his cultures for 24 hours.

Antigens for this investigation were prepared in the same way throughout, and the technique of making the agglutination tests and the interpretation of the results were identical. Strains of *Salmonella pullorum* chosen for antigen were checked for purity by microscopic examination of stained smears and inoculation into broth media containing 1 per cent of the carbohydrates, dextrose, lactose, dulcitol (or maltose), and sucrose. The solid medium used was meat extract agar containing 0.3 per cent meat extract, 1 per cent peptone, and 1.5 per cent agar. Kolle flasks were inoculated with the pure cultures, incubated for 72 hours at 37° C., and the growth washed off with a salt solution containing 0.85 per cent sodium chloride and 0.5 per cent phenol. The washings were filtered through cotton in a funnel and combined. The diluent for the test fluid was physiological saline solution containing 0.25 per cent phenol. The turbidity and pH of the antigens were standardized as required. Agglutination tests were set up in dilutions of 1:10 and higher, sufficient to detect the titer of the serum. In a few cases in the earlier tests not enough tubes were used for a few sera where the titer exceeded 20,480. Tests were incubated for 24 hours at 37° C. and an additional 20 to 24 hours at room temperature. Reactions were recorded as follows, and given a corresponding numerical value for the purpose of comparative study:

	<i>Recorded Reaction</i>	<i>Numerical Value</i>
Complete agglutination.....	4	4
Incomplete agglutination.....	3	3
Partial agglutination.....	2	2
Slight agglutination.....	1	1
No agglutination.....	0	0

Effect of Age on the Quality of Concentrated Antigen

A number of workers studying antigen or using it in routine tests have expressed opinions concerning the length of time antigen may be held without deterioration. Gage, Paige, and Hyland (36) reported in 1914 that "test fluid properly preserved on ice will keep in a very active state for more than two months"; and later, in 1925, Brunett (10) stated that a "quantity of antigen can be prepared and kept for a period of months when stored in a cool place in an uncontaminated condition." Gwatkin (40) agreed that "antigen was found to stand up well and could be kept for months in the ice chest." Mallman (60) found that *S. pullorum* antigen could be kept for 12 months at approximately 10° C., but Stafseth and Thorp (86) differ widely, stating that an antigen may

decrease in agglutinability or become less stable and that fresh antigens are usually more satisfactory than those that have been kept more than 2 weeks. Doyle (27) found that, in antigens from cultures being studied, storage up to 36 days had no influence on the titer. Biely (5), using the rapid serum method, found perfect agreement in 171 tests between an antigen 3 years and 7 months old and an antigen 1 day old. Jones (53) found that diluted test fluid might be kept for "several months in a refrigerator."

For the study of the effect of age on concentrated antigen, a quantity of antigen was prepared from three strains, Nos. 10, 11, and 20, of *S. pullorum*, which had been successfully used in the production of antigen for a large number of tests. Strain No. 11 was isolated from the ovary of a hen and Nos. 10 and 20 were isolated by Dr. Rettger of Yale University from baby chicks in 1916 and 1917, respectively. This stock antigen which was about 20x tube No. 1 of the McFarland nephelometer standard was stored at 8° C. A portion was diluted and tested when it was prepared. Further tests were made at biweekly intervals, with three exceptions when 4 weeks elapsed between tests, for the 583 days over which the investigation extended. On the second and succeeding tests a fresh antigen composed of the same strains was prepared and tested in the same manner as the stored antigen. Both antigens were adjusted to a turbidity between 0.75 and 1.0 on the McFarland nephelometer scale and a pH of 8.4. Fresh sera were used for each test. Samples were taken from each of 10 birds known to be reactors and 5 non-reactors. Comparative tests were made 37 times with a total of 555 sera (365 positive, 185 negative, and 5 which were cloudy and recorded as unsatisfactory).

Table 1 gives the results of the tests in numerically computed values and an analysis of the positive and negative reactions and relative sensitivity. Judged by this standard, there appears to be little choice between the two antigens and no evidence of inferiority in the stored antigen as it grows older. In 18 of the tests the stored antigen had a slightly higher value against 19 times when the freshly prepared had a higher value. The variations observed at each test might readily be explained in part as due to differences in individual sera. It may be possible that a difference in the contents of any sera, aside from agglutinins, might cause a variation in the reaction with even the most satisfactory antigen. Furthermore, such factors as technique of testing and interpretation of reactions might influence the variations that have been observed. The macroscopic observation of the tests showed no difference in the type of agglutination. The reactions with the one antigen were as typical and distinct as with the other. No progressive change in the stored antigen affecting its efficiency as an agglutination test fluid occurred. The turbidity of the stock antigen decreased from 20x to 15x tube No. 1 of the nephelometer during the duration of the experiment.

Effect of Age on Dilute Antigen

The effect of storage on dilute antigen was investigated in two trials: the first, less extensive, over a period of 5 weeks, and the second extending over 15 weeks. A report of the first is omitted because the results were similar to those of the second. In many laboratories sodium hydroxide is added to dilute antigen to eliminate, as far as possible, "cloudy reactions" and has been reported as a valuable agent in this respect, first by Mathews (62) and later by Stafseth and Thorp (86), Casman, Valley, and Rettger (17), Bleecker and Schilling (6, 7), and the Connecticut (Storrs) Agricultural Experiment Station (19). Dilute antigens with and without the excess sodium hydroxide were tested.

The three strains of *S. pullorum* used for this experimental antigen were the same as those used in the work with concentrated antigen. The stock antigen

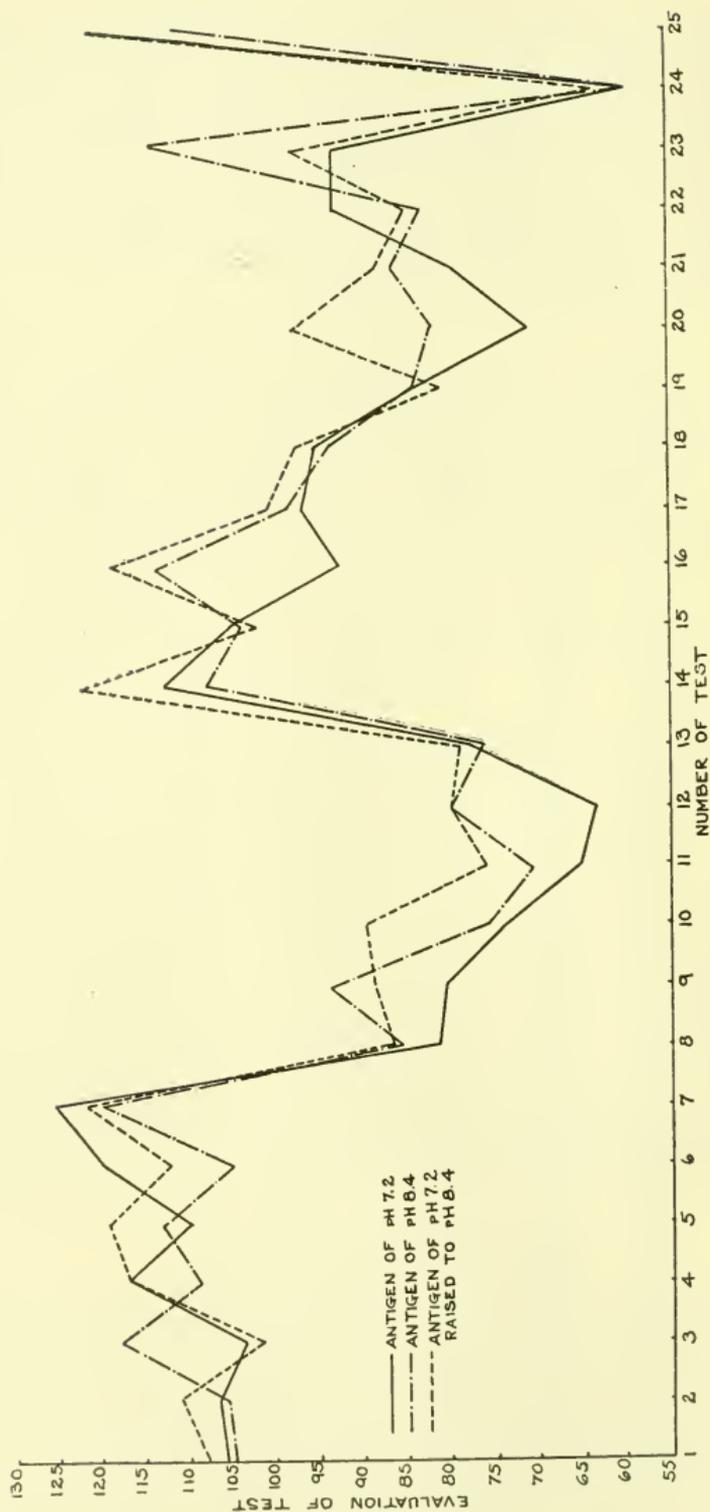

was prepared and diluted to a turbidity equal to tube No. 1 of the McFarland nephelometer. One-third had sufficient sodium hydroxide added to raise the pH to 8.4. The other two-thirds were stored with the pH at 7.2. Both portions were tested the day they were prepared and diluted. At later tests, these two antigens and a third, produced by adding N/20 sodium hydroxide to raise the pH to 8.4 to a portion taken from the stock of antigen of pH 7.2, were tested with 5 positive and 5 negative sera. Tests were made each day for 8 days, then at 10, 12, 14, 17, and 21 days of age, and each week to the conclusion of the experiment. Whenever tests were made the pH and turbidity of each of the stored portions of test fluid were determined.

TABLE 1.—RESULTS OF COMPARATIVE TESTS WITH STORED AND FRESHLY PREPARED ANTIGENS

* S—Stored antigen. F—Freshly prepared antigen.

** The remainder of the reactions of the ten positive sera were recorded as unsatisfactory.

GRAPH 1—Evaluation of the Tests Which Were Made With Three Different Antigens

Contrary to the report of Stafseth and Thorp (86) no change was observed in the turbidity. There was a slight change noticed in the pH, however, beginning at the eighth week when the pH of the 8.4 antigen had decreased slightly. By the twelfth week, the alkalinity had decreased so that the pH was 8.2, and at the last test (fifteenth week) it was 8.0-8.2. The pH 7.2 antigen began to show a decrease in alkalinity about the twelfth week and had a pH of 7.0 by the fifteenth week. Comparing the results on a numerical basis as in the case of the concentrated antigen, the antigen of pH 7.2 raised to 8.4 at the time of the test was the most sensitive in 14 of the 25 times it was tested; in 5 tests it was more sensitive than one of the other antigens and in 3 it was identical with one other antigen; and in only 3 tests was it the least sensitive. The almost parallel tendency of the three to fluctuate is plainly shown in Graph 1. The summary of the values from which the data for the making of the graph was derived is as follows:

	pH 7.2 antigen	pH 8.4 antigen	pH 7.2 raised to 8.4 antigen
Number of tests.....	25	25	25
Number of tests most sensitive.....	4	3	14
Number of tests more sensitive than one other antigen.....	7	9	5
Number of tests least sensitive.....	11	11	3
Number of tests identical with one other.....	3	2	3

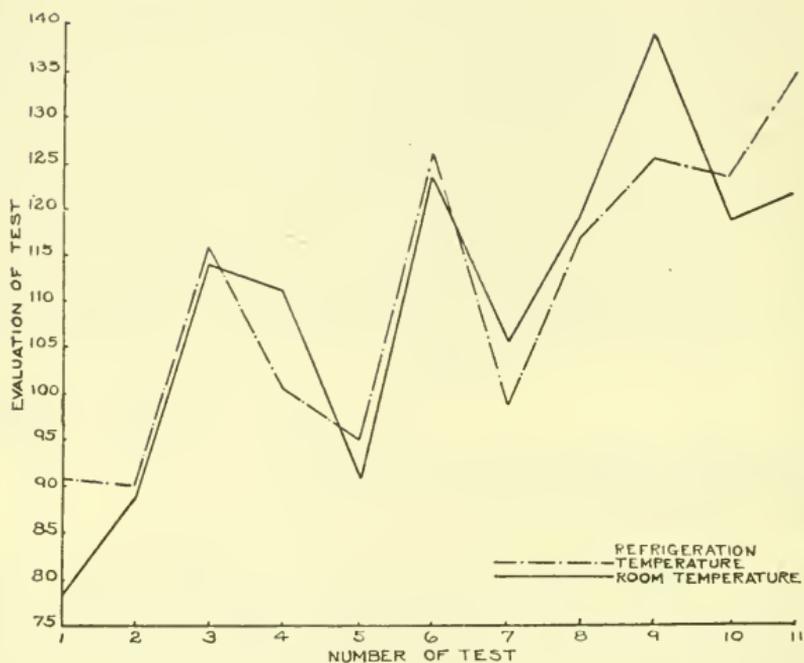

The type of agglutination in the tests showed no appreciable difference during the course of the experiment. Cloudy reactions occurred in the pH 7.2 antigen in a few instances. The pH 7.2 antigen seemed slightly less sensitive on the whole and the pH 8.4 antigen not quite as sensitive as that to which sodium hydroxide was added at the time of the test. However, the results suggest that a diluted antigen with pH 8.4 loses very little, if any, of its antigenic value during a period of fifteen weeks.

Effect of Frequent Transfers and Low Temperature on the Cultures

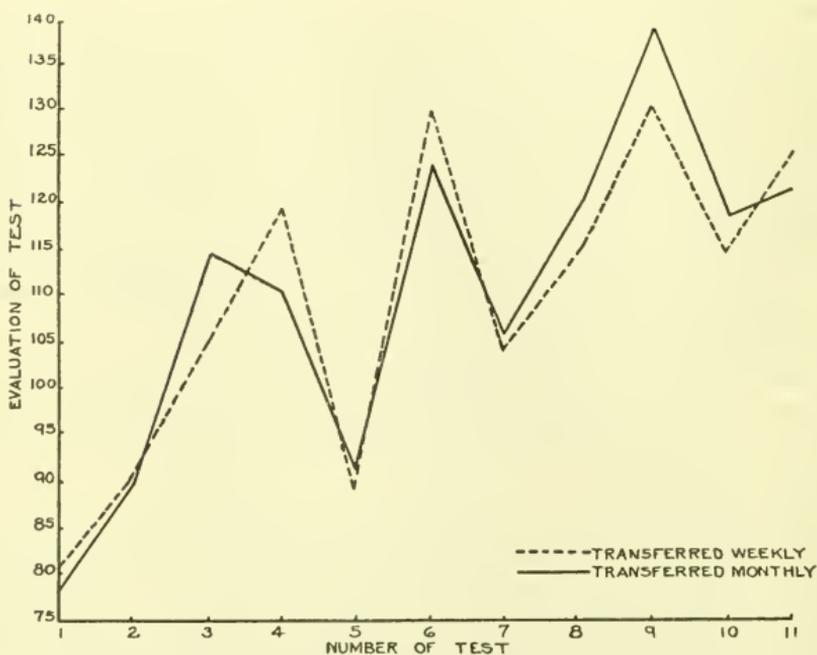

In view of the fact that very frequent transfer to fresh medium and storage at refrigerator temperature may cause changes in the behavior and morphology of many bacteria, *S. pullorum* was treated in this way to observe whether any marked changes resulted and whether the antigens produced from the cultures were in any way less satisfactory for agglutination tests. Speaking of *S. pullorum* for agglutinable antigen, Jones (53) states that freshly isolated or even second or third generation cultures give better results than those under cultivation for a longer time; but Tittsler (88) after the work had been in progress much longer was unable to establish any correlation between "agglutinability and the length of time strains had been carried in stock on artificial media."

Casman, Valley, and Rettger (17) in some detailed work found that antigens prepared from cultures grown at different temperatures (37°, 34°, 30°, 24°, 20°, and 16° C.) and for different periods of time (1, 2, 3, 5, 6, 9½, and 10 weeks) revealed no agglutinable differences. Antigens of equal value were also prepared from cultures transferred twice a week for a period of 10 weeks and incubated at 37°, 30°, and 16° C.

The temperature chosen for the observations at this laboratory was approximately 8° C., and the interval between transfers to fresh medium was one week. A set of cultures held at a temperature approximately 22° C. and transferred to fresh medium once a month served as a control. Three strains of *S. pullorum*, designated as Nos. 17, 19, and 20, were studied. The strains were all isolated by Dr. Rettger of Yale University, strain No. 17 from a baby chick in 1916, strain No. 19 from a hen in 1911, and strain No. 20 from a baby chick in 1917. Three agar slant subcultures were made from each strain and incubated 48 hours at 37° C. The cultures were distributed as follows: one of each strain placed

GRAPH 2—Evaluation of the Tests Which Were Made With Two Antigens, Each Prepared from Cultures Retained at Different Temperatures

GRAPH 3—Evaluation of the Tests Which Were Made With Two Antigens, Each Prepared From Cultures Transferred at Different Intervals

at 8° C. and the other two held at room temperature. Of the two at room temperature, one set was chosen to be transferred each week and the other once a month when each of the sets was transferred to duplicate agar slants as the first step in the preparation of antigen. After 24 hours' incubation, one of these was returned to its place of storage and the other used to inoculate the medium from which the growth was washed as antigen. From the three antigens prepared, tests were made with 5 positive and 5 negative sera. The antigen from the control cultures served as a standard of comparison for each of the other two antigens.

Graphs 2 and 3 show the relation of each antigen to the control antigen and the degree of fluctuation more clearly than can be described. A summary of the numerical deductions of the 11 different antigens prepared and tested is given below:

Comparative Results on Antigens Prepared from Cultures Retained at Different Storage Temperatures

	<i>Antigens prepared from cultures stored at temperatures</i>	
	8° C.	22° C.
Number of tests.....	11	11
Number of sera tested.....	110	110
Total value of all reactions.....	1,222	1,213
Number of positive sera tested.....	55	55
Number of positive sera with higher value.....	20	20
Number of positive sera with identical value.....	15	15
Number of negative sera tested.....	55	55
Number of negative sera reacting.....	15	19
Total value of reactions in negative sera.....	26	33
Number of tests more sensitive.....	7	4

Comparative Results on Antigens Prepared from Cultures Transferred at Frequent Intervals

	<i>Antigens prepared from cultures transferred</i>	
	<i>Monthly</i>	<i>Weekly</i>
Number of tests.....	11	11
Number of sera tested.....	110	110
Total value of all reactions.....	1,213	1,200
Number of positive sera tested.....	55	55
Number of positive sera with higher value.....	23	17
Number of positive sera with identical value.....	15	15
Number of negative sera tested.....	55	55
Number of negative sera reacting.....	19	15
Total value of reactions in negative sera.....	33	27
Number of tests more sensitive.....	6	5

Smears of the three sets of cultures were made and stained for microscopic examination and comparison six times during the experiment. Slight variations were observed, for the greater part, an irregularity in the size of the organism in each strain and a tendency to form short chains in some cases. The variations were similar for the cultures transferred frequently and for those held at 8° C.

The type of agglutination reactions of the different antigens appeared almost identical, comparing well with the degree of reactions from which the numerical data were compiled.

Conclusions

1. Under the conditions of the investigation, concentrated *S. pullorum* antigen remained as sensitive and specific after 583 days' storage at approximately 8° C. as freshly prepared antigen.

2. Dilute antigen of a pH 8.4 did not suffer an appreciable decrease in any of its essential qualities in a period of 15 weeks when held at a temperature approximately 8° C.

3. Addition of sufficient sodium hydroxide to adjust the pH to 8.3-8.5 did not cause a detectable autolysis or clearing in dilute antigen during 15 weeks of storage at approximately 8° C.

4. Slight variations in the morphology of stock cultures held at 8° C. or transferred to fresh medium weekly were observed.

5. Antigens from cultures transferred weekly or stored at a temperature of approximately 8° C. for 49 weeks were as satisfactory for use in making agglutinable antigen as cultures held at 22° C. and transferred at monthly intervals.

JELLIED BLOOD SAMPLES

In this laboratory jellied chicken blood samples are an important problem in preparing agglutination tests for the detection of pullorum disease carriers. An investigation was undertaken because most of the jellied blood samples require extra handling and some of the tests are not very satisfactory. There seems to be a scarcity of discussion on jellied samples in the literature on pullorum disease. At the first conference of Laboratory Workers in Pullorum Disease Control in 1928, and at later conferences, other laboratories reported occasional experiences with such samples.

In Massachusetts, the routine pullorum disease testing season extends approximately from September first to March first. The blood samples are collected by trained personnel designated as blood collectors. From an incision in the wing vein, 0.5 to 1 cc. of blood is collected into an 8 x 77 mm. tube. While the tubes are placed in a slightly inclined position, the surface of the coagulum does not become slanted. At the end of the day's work, the samples are iced, shipped by express, and usually arrive at the laboratory the following morning. After separating the clots from the walls of the tubes, the samples are centrifuged, and sera are transferred to agglutination tubes.

The term "jellied" as used in this report refers to a blood sample in which the supernatant serum presents the consistency of jelly. Such samples in the process of jelling may show various characteristics. Among the samples received at the laboratory some were not clotted 18 to 48 hours after collection. Approximately 50 per cent of these samples may jelly. The supernatant serum in some samples may be jellied while the blood constituents below will be in a fluid state. Furthermore, the entire column of serum is not always jellied. The lower portion of the column may be in a fluid or semi-fluid state, either with or without inclusion of blood cells. Occasionally the serum column may be completely jellied, containing either scattered cells or no cells, with the blood column below formed into a firm mass. A clotted sample, apparently normal, may yield jellied serum after dissociation of the clot and centrifugalization. In the majority of jellied samples liquid serum is obtained when the blood mass is dissociated and centrifuged. It may be necessary to repeat this procedure several times to obtain liquid serum. Infrequently, the serum in the agglutination tube and rarely the antigen-serum mixture become jellied.

Preliminary Observations

This investigation was started in September, 1930. Earlier general observations concerned blood samples which were placed in an incubator at approximately 37° C. for 45 to 60 minutes. This exposure of the blood samples to heat either before or after centrifugalization appeared to influence the number of jellied samples.

The following observations were associated with frequent collections of blood samples from 19 birds (10 pullets and 9 cockerels). The birds were housed in a warm room and during the day were placed in a yard when the weather permitted.

1. Jellying appeared in from 0 to 70 per cent of the samples which were exposed to 2° C. immediately after collection and held at this temperature for from 3 to 40 hours.

2. Jellying appeared less frequently when the samples were subjected to a temperature of 10° C. for similar periods of time.

3. Jellying did not appear in the samples which were held at 22° C. for two hours after collection and then placed at 2° C. for varying periods of time.

4. The temperature of the tubes at the time of collection appeared to have no influence upon jellying. Quadruplicate samples were collected. Two warm tubes (approximately 22° C.) and two cold tubes (approximately 2° C.) were used. One warm-tube sample was held at 22° C. and the other at 2° C. The cold-tube samples were handled in the same way.

5. Jellying was slightly less frequent when samples were collected in 11 x 100 mm. tubes than when 8 x 77 mm. tubes were used.

6. Jellying appeared when blood samples were centrifuged immediately after collection.

7. Attempts to produce jellied samples by collecting blood into tubes which had been washed in dilute hydrochloric acid were unsuccessful. The same observation was made when the tubes were washed in sodium hydroxide and incompletely rinsed before use.

8. Blood samples were taken in duplicate while the birds were in the warm room. Half of the samples were placed at a temperature of 0° C. for 1 hour and the other half held at the room temperature. Then all samples were placed in a refrigerator (8° C.) for approximately 24 hours. Jellying occurred among the samples exposed to the lower temperature and did not occur among those exposed to the room temperature.

9. On different occasions, blood samples were taken in duplicate while the birds were in the yard, and when the atmospheric temperatures varied from 1° to 12° C. Half of the samples were placed in the operator's vest pockets and half exposed to the atmospheric temperature during the course of blood collection (approximately 30 minutes). Then the former were held at room temperature, and the latter at the prevailing atmospheric temperature for 1 hour. Finally all samples were placed in a refrigerator (8° C.) for approximately 24 hours. Jellying occurred among the samples exposed to the atmospheric temperatures and did not occur among the samples placed in the operator's vest pockets.

These preliminary observations were made upon a small number of birds maintained at the laboratory. It appeared that certain of these earlier general and preliminary observations should be investigated further. Arrangements were made to do this, both in the field and in the laboratory.

Experimental Procedure and Results

I. Instructions were given to two blood collectors to place the even numbered samples into their inner pockets for about 30 minutes, and then place them in the containers with the odd numbered samples which were to be handled in the routine manner. Data concerning the observations are presented as follows:

Blood Collector	Number of Samples	Even Samples		Odd Samples	
		Jellied	Per Cent	Jellied	Per Cent
A	4,011	88	4.4	290	14.4
B	3,009	62	4.1	207	13.7

II. An electrically heated water bath was employed to keep the even numbered samples warm for 1 hour. The odd numbered samples were handled in the routine manner. The first two days the temperature of the bath was maintained at 36° to 40° C. Later the temperature was maintained at 27° to 32° C. The temperature in the poultry houses varied from 3° to 14° C. at the time of collection. Among 744 even samples, 4 (0.5 per cent), and among the same number of odd samples, 227 (30.6 per cent), were jellied. It happened that on the same days, the same blood collectors collected 641 other samples which received routine handling, i.e., as the odd samples, and 220 (31.5 per cent) were jellied.

III. An insulated heater, incorporating the principles of a double boiler with hot water as a source of heat, was devised. Alternate samples were placed in this heater at temperatures varying from 21° to 46° C. for periods of 10, 15, 20, 30, and 60 minutes. Among the 1,210 samples placed in the heater 67 (5.49 per cent) were jellied, while among 1,191 samples handled in the routine way 277 (23.25 per cent) were jellied. In general, jellying was markedly reduced in the samples exposed to the higher temperatures. The longer periods of exposure had a like influence. A combination of an optimum temperature and an optimum period of exposure was not determined.

IV. After the clots had been separated, 2,894 samples were divided on the basis of odd and even numbers. The odd samples were centrifuged while the even samples were placed in an incubator (approximately 35° C.) for 1 hour before centrifugalization. There were 185 (12.7 per cent) jellied samples among the odd and 112 (7.7 per cent) among the even samples.

V. Instructions were given to one blood collector to collect approximately 0.5 cc. and approximately 1 cc. in alternate tubes. Among a total of 459 samples which he collected in one day, 70.8 per cent of the small and 55.2 per cent of the large samples were jellied. On another day 500 blood samples were collected in accordance with these same instructions. Among a total of 250 samples, 39.6 per cent of the small and 20.1 per cent of the large were jellied. The other 250 samples of this day's work were placed in an incubator for one hour, just previous to centrifugalization, and 32.1 per cent of the small and 14.1 per cent of the large were jellied.

VI. The even-numbered samples of 2,005 received on the day of collection were held over night at room temperature (22°-25° C.) while the odd samples were held in a refrigerator (8° C.). There were 46 (4.6 per cent) of the odd and 5 (0.5 per cent) of the even samples jellied. There was slight hemolysis in many and marked hemolysis in a few of the samples which were held over night at room temperature.

From September 29 to December 26, 1930, records were kept on 238,860 samples. These samples were collected by sixteen blood collectors and were handled in the laboratory on the day following collection. The number of jellied samples recorded at the time the sera were transferred to the agglutination tubes was 10,886 (4.56 per cent). In individual shipments jellying was recorded in from 0 to 85 per cent of the samples. The correlation between the number of jellied samples and certain temperature ranges is shown in Table 2. The daily mean temperature in Amherst was selected as representative of the State. The mean temperatures were procured from meteorological observations of the Massachusetts Agricultural Experiment Station and divided into six groups. The samples were distributed upon the basis of the temperature of the day on which they were collected.

In 1931, during approximately the same period, records were kept on 270,785 samples. These samples were collected by eleven of the 1930 blood collectors and five men employed for their first season. The only difference in the method of

handling was that on cold days the blood collectors placed the samples in their inner pockets for approximately thirty minutes. The number of jellied samples recorded at the time the sera were transferred to the agglutination tubes was 4,133 (1.53 per cent). The observations for 1931 are also shown in Table 2.

TABLE 2—INFLUENCE OF TEMPERATURE UPON INCIDENCE OF JELLIED BLOOD SAMPLES IN 1930 AND IN 1931

Temperature ° F.	1930			1931		
	Number of Samples	Samples Jellied		Number of Samples	Samples Jellied	
		Number	Per cent		Number	Per cent
10-19.....	9,206	966	10.49			
20-29.....	19,179	1,746	9.10	32,867	756	2.30
30-39.....	91,424	5,757	6.30	32,110	999	3.11
40-49.....	66,659	1,950	2.93	99,360	1,671	1.68
50-59.....	46,853	450	0.96	70,291	631	0.90
60-69.....	5,539	17	0.31	36,157	76	0.21
Totals.....	238,860	10,886	4.56	270,785	4,133	1.53

The occurrence of jelling seems to be associated with the temperature at the time of collection of the blood samples. It is thought that the marked reduction in jellied samples in 1931 can be attributed in part to the difference in the method of handling the samples on the cold days. However, the mean monthly temperatures in Amherst in 1930 were lower than in 1931, as is shown in Table 3, and to this fact part of the reduction is attributed.

TABLE 3—INFLUENCE OF MEAN MONTHLY TEMPERATURES UPON INCIDENCE OF JELLIED SAMPLES IN 1930 AND IN 1931

Month	1930				1931			
	Mean Temp. ° F.	Number of Samples	Jellied Samples		Mean Temp. ° F.	Number of Samples	Jellied Samples	
			Number	Per cent			Number	Per cent
October.....	48.9	102,735	1,994	1.94	53.6	112,509	1,062	0.94
November....	40.2	82,451	3,794	4.60	44.1	98,379	1,702	1.73
December....	28.1	53,674	5,098	9.50	31.6	59,897	1,369	2.29
Totals.....		238,860	10,886	4.56		270,785	4,133	1.53

In general, it seemed that the number of jellied samples varied considerably with individual blood collectors in spite of practically uniform equipment and technique. The individual records of the eleven men who collected samples during 1930 and 1931 were assembled and are shown in Table 4.

During 1930, the individual blood collector percentages of jellied samples ranged from 0.9 to 14.0 and in 1931 from 0.002 to 5.36. The records of the blood collectors, with one exception, showed marked decreases in the percentages of jellied samples during the second year. No satisfactory explanation was apparent for blood collector G's increase of 0.31 per cent of jellied samples during the second season.

TABLE 4—THE INCIDENCE OF JELLIED SAMPLES FOR BLOOD COLLECTORS IN 1930 AND IN 1931

Blood Collector	Season	OCTOBER		NOVEMBER		DECEMBER		TOTAL	
		Number Samples	Per cent Jellied

Discussion

The jelling of blood samples was found to occur with great irregularity. Observations limited to the collection of blood samples from a small number of laboratory birds suggested several possible contributing factors. A chemical investigation of jellied samples was not undertaken. The relationship of feed to jelling was not studied. The effect of the physical condition of birds, at the time of collection of blood, upon jelling was not studied to any great extent. Blood samples from a few laboratory birds which were in a somewhat weakened condition showed a slight tendency to jelly consistently. No healthy individuals appeared to be constant offenders. The extent to which the character and size of the incision may contribute to jelling was not investigated extensively, although they appeared to have some influence. Less jelling was noted in blood samples from chickens than in those from pigeons, pheasants, and guinea fowls. This difference may be associated with the character and size of the incision. The rate of flow of blood from the incised vein is much slower for chickens in general. To what extent generic characteristics may be a contributing factor was not determined.

In the routine collection of blood samples, it appeared that the temperature at the time of collection of samples and the method of handling after collection are important factors. The three methods of applying heat to blood samples, by placing in blood collector's pockets, by using a hot water heater, and by using an electrically heated water bath, assisted in reducing the number of jellied samples. The amount of blood collected had a slight influence on the number of jellied samples, there being less jelling of the larger samples. The difference, however, was not as marked as in the case of the application of heat to the blood samples. Holding blood samples over night at room temperature or placing them in an incubator for one hour at 35° C. reduced the number of jellied samples. Varying degrees of hemolysis occurred in the samples held over night at room tem-

perature. In the routine collection of over 500,000 blood samples during parts of two testing seasons, jellied samples occurred more frequently when the average mean atmospheric temperatures were low. The percentage of jellied samples increased progressively during the months of October, November, and December respectively. This increase in the percentage of jellied samples, when the temperature becomes low, may be associated with the inhibitory influence of cold on the clotting of blood. The individual blood collector appears to be another contributing factor in the jelling of samples. It is not apparent how this influence is exerted, but it may be due to slight individualistic differences in the method of collection.

Conclusions

1. A jellied condition was produced in chicken blood samples by immediate centrifugalization and by exposure to low temperatures.
2. The atmospheric temperature at the time of collection appeared to be a major factor in the incidence of jellied blood samples of chickens.
3. The application of heat materially reduced the number of jellied samples.
4. The application of heat immediately after collection was found to be more satisfactory for reducing the number of jellied samples than the application of heat at the laboratory 16 to 24 hours later.
5. The individual blood collector was a variable factor in the incidence of jellied samples.
6. The incidence of jellied samples was greater among samples containing 0.5 cc. of blood than among those containing 1 cc.

NON-INFECTED FEMALES MAY CONTRACT PULLORUM DISEASE THROUGH EATING FRESH EGGS LAID BY INFECTED HENS

The problem of eradication of pullorum disease is most difficult since adult birds may harbor in the ovarian tissue the causative organism which can be transmitted to the progeny by means of the egg. The presence of *S. pullorum* both in fresh and in incubated eggs has been detected by several investigators. Rettger and Stoneburn (72) found the organism in incubated fertile and infertile eggs. Jones (51, 52) isolated *S. pullorum* from incubated eggs and later recovered the organism from fresh eggs laid by hens that had overcome an acute attack of the disease during chickhood. Rettger (75), in an examination of approximately 10,000 eggs, found that *S. pullorum* could be isolated with less difficulty from incubated than from fresh eggs. He advised that in testing for the organism, the entire yolk or a large portion of it be used, or that only eggs which have been incubated for at least five or six days be examined. The organism may even escape detection in eggs that have been retained at ordinary room temperature for two weeks if a large part of the yolk is not examined. Gwatkin (39) found 4.76 per cent among 420 eggs examined infected with *S. pullorum*. Runnels and Van Roekel (82, 83) reported that 14 per cent of 305 eggs contained *S. pullorum*. The percentages of isolations were approximately the same for fresh and incubated eggs. In a later experiment, the organism was recovered from 33.7 per cent of 169 eggs examined. Dearstyne, Kaupp, and Wilfong (23) reported that among 2,706 fresh eggs examined, 10.3 per cent contained the organism. Tittler, Heywang, and Charles (90) found 5.2 per cent of 1,560 eggs infected with *S. pullorum*. The majority of these eggs were incubated at 37° C. for 10 days prior to examination. If this means of dissemination did not exist the malady would not be of such importance, and the task of control and eradication of the disease might be far less difficult.

In addition to the fact that the disease may be transmitted to the progeny by means of the egg, it is known that incubated infective eggs are capable of producing the disease when fed to poultry or to other animals. Jones (53) reported a septicemic outbreak of pullorum disease among adult hens caused by the feeding of incubated eggs that contained *S. pullorum*. Rettger (78) stated that eggs harboring large numbers of the organism produce abnormal conditions when fed to young chicks, adult fowls, young rabbits, guinea pigs, and kittens. Mathews (63) observed field cases where infection was introduced through the feeding of incubated, infertile eggs. He also was able to infect eight pullets by feeding incubated naturally infective eggs. Olney (68) reported a severe outbreak of the disease among adult rabbits as a result of feeding incubated, infertile eggs.

While *S. pullorum* has been isolated from fresh eggs, the possibility of such eggs being infective when eaten by animals has not been definitely established. Van Heelsbergen (91) reports that very often thin-shelled eggs are laid by carriers affected with salpingitis. These carriers do not always lay their eggs in the trap nests, thereby affording other birds an opportunity to pick the shell and eat the infective contents. According to investigations, such eggs are very infectious for adult hens. Other investigators (48, 84, 92) report that fresh eggs laid by infected birds may reproduce the disease when eaten by other birds.

It is known that frequently eggs are laid on the floor and dropping boards. Especially is this true for pullets when they first reach sexual maturity. If the eggs are broken, an opportunity for birds to eat or come into contact with the contents is afforded. Some birds even develop a habit of egg-picking and egg-eating. While field and laboratory observations suggest that pullorum disease may be disseminated in such a manner, experimental evidence has been lacking. Therefore, an investigation was designed to determine whether non-infected females may contract pullorum disease through eating fresh eggs laid by infected hens.

Procedure

Eighteen birds, free from pullorum disease, were divided into two groups.

In Group A, the birds (5 hens and 7 pullets) were held in individual cages. Their diet consisted of cracked grain, laying mash, and one egg from infected hens a day. Prior to the feeding of the eggs, an effort was made to determine which reacting birds were laying infective eggs. One hundred eggs, laid by 9 birds, were examined bacteriologically for *S. pullorum*. The organism was isolated from eggs laid by all of these birds with the exception of 2. *S. pullorum* was recovered from 12 per cent of the total eggs cultured. Recognizing the fact that the elimination of the organism through the egg is neither constant nor permanent, it was considered advisable to determine the approximate incidence of the organism in the eggs which were to be fed. The initial method of feeding the egg was to break it and place it upon the litter. Since not all birds ate the egg given in this manner, the method of feeding was changed. A broken egg was placed in each feed cup daily. This method also proved unsatisfactory and was further modified. An egg was mixed with sufficient dry mash in the feed cup to make a semi-dry mixture, which was readily eaten by all birds. Cracked grain was added to the diet whenever the egg-mash mixture had been eaten. All birds were fed a minimum of 31 feedings and one received as many as 65. Each bird was tested by the macroscopic tube agglutination method in dilutions of 1:10 and higher at weekly intervals.

The antigen used was a composite of three known agglutinable strains of *S. pullorum*. The organisms were grown on nutrient agar for 72 hours at a temperature of 37° C. The growth was then washed off with phenolated, physiological saline solution and the suspension standardized to a turbidity corresponding

to 0.75-1 on the McFarland nephelometer scale. The pH was adjusted to approximately 8.4.

Group B consisted of 6 pullets, 3 months of age, which were placed together in a pen. Six eggs, mixed with sufficient mash to make a semi-dry mixture, were fed daily. This ration was supplemented with cracked grain when the egg-mash mixture had been eaten. The group was given 30 daily feedings of 6 eggs. The birds were tested at weekly intervals by the tube agglutination method in dilutions of 1:10 and higher. The antigen employed was identical with that used for Group A.

Results

In Group A, specific agglutinins were detected in 4 birds (2 hens and 2 pullets), as is shown in Table 5. Two birds attained a maximum titer of 1:2,560. Sera of 5 birds produced non-specific agglutination in the lower dilutions. All birds were necropsied approximately one month after the last feeding with the exception of 1 hen. This bird died of a septicemic form of the disease 14 days after the last feeding. In the majority of the birds, cultures were taken for bacteriological determination from pericardial fluid, liver, spleen, ovary, and any suspicious lesions. *S. pullorum* was isolated from the 2 hens, including the fatal septicemic case, whose sera agglutinated pullorum antigen. *S. pullorum* was not isolated from the remaining 10 birds.

In Group B, 18 days after the first feeding, three sera produced a slight agglutination in the lower dilutions and one had a titer of 1:640. Seven days later, these 4 birds had developed titers of 1:160 or higher. As is shown in Table 5, agglutinins were produced in the blood of all birds. In 2 birds the maximum titer was 1:5,120 and in 1 the titer did not exceed the 1:80 dilution. One bird died from an intestinal obstruction and the septicemic form of the disease 25 days after the last feeding. *S. pullorum* was recovered on necropsy. The remaining five birds were necropsied 47 days after the last feeding and *S. pullorum* was recovered from 2. The organisms isolated from the 4 birds in this experiment were identified by morphological, biochemical, tinctorial, and agglutinable characteristics.

Discussion

According to these observations, it is evident that fresh, naturally infective eggs are capable of reproducing the disease when fed to hens and pullets. Evidence of the disease was detected in 4 of the 12 birds that received individual feedings. The fact that each bird in this group received 1 egg at each feeding rather than a portion of a composite of eggs may account partly for the smaller number of infected birds when compared with Group B. It is possible that the age of the birds and the manner of confinement may be responsible for this difference. The incidence of the organism in the eggs may have been greater in those fed to Group B. Since the smallest number of infective eggs necessary to infect birds by the oral route has not been determined, it appears possible that under a suitable environment 1 fresh infective egg might be capable of reproducing the disease in mature as well as immature birds. If such is the case, then the problem of "egg-eating" is of serious consequence in pullorum disease dissemination, because eggs laid on the floor and dropping boards frequently are broken and eaten by non-infected birds. Of course, not all eggs harbor the organism, but it is likely that some infected birds may lay infective eggs in places other than nests. This means of dissemination can be eliminated to a large extent by testing young birds before they reach sexual maturity. In spite of the fact that all infected birds may not be eliminated at this age, testing at this time does permit one to dispose of the bulk of the potential source of infection.

TABLE 5—DATA CONCERNING BIRDS FED FRESH EGGS LAID BY INFECTED HENS

Group	Bird No.	AGGLUTINATION REACTION		NECROPSY REMARKS		Titer		
		Number of Feedings	Maximum Titer	Days after First Feeding	Days after Last Feeding		Tissues Cultured	<i>S. pullorum</i> Isolated

P—Non-specific agglutination in lower dilutions.

+ Titer not determined.

Conclusions

1. Fresh eggs, laid by reacting hens, may produce pullorum disease when fed to non-infected hens and pullets.
2. It is probable that younger birds may contract the disease more readily through eating infective eggs than older birds.
3. The habit of "egg-eating" or "egg-picking," in an infected flock, should be regarded as a hazard to an eradication program for such a flock.

EXPOSURE OF PULLORUM DISEASE-FREE BIRDS TO SOIL AND LITTER CONTAMINATED WITH FECES FROM POSITIVE REACTING BIRDS

The object of the experiment reported in this paper was to determine whether pullorum disease-free birds could be infected through exposure to soil and litter contaminated with feces from positive reacting birds.

From the results reported by several investigators, it can be concluded definitely that pullorum disease does spread through the association of infected with non-infected, sexually mature birds. Rettger, Kirkpatrick, and Stoneburn (74) have reported cross-infection when 7 non-infected hens were penned with 7 infected hens for a period of 2 years. To determine whether a bird became infected or not, all eggs laid by the negative birds were examined for *S. pullorum*. By this method it was determined that 3 of the original non-infected hens had become infected. The same authors also were able to infect non-infected hens by sprinkling a broth culture of *S. pullorum* on the litter two or three times a week. Doyle (27) was unsuccessful in transmitting pullorum disease when 50 positive-reacting hens were housed with 30 non-reacting hens for 1 year. Leynen (59) concluded that the spread of pullorum disease through cohabitation does not occur readily. Brunett (11, 14) after an extensive study concluded that pullorum disease spreads between mature birds but not to as great an extent as is generally believed. He was successful in demonstrating the spread of pullorum disease both in the presence and absence of male birds. Edwards and Hull (31) concluded that the transmission of pullorum disease may occur without the presence of males. Kernkamp (55), from the results of two experiments, concluded that pullorum disease spreads between sexually mature birds. In both of these experiments, male birds were present in the pens. Warrack and Dalling (94, 95), after a series of experiments, made the following conclusion: Transmission of pullorum disease takes place among sexually mature birds and the smaller the space in which birds are penned the greater the chance of transmission taking place. Investigations at the California (16) and Illinois (50) Agricultural Experiment Stations have also shown the transmission of pullorum disease between infected and non-infected adult birds. Kerr (56) reported the isolation of *S. pullorum* from the feces of three adult hens by bacteriological methods. This is the only reference noted in which *S. pullorum* has been isolated from the feces of adult birds.

Although Doyle (27) was unsuccessful in transmitting pullorum disease through the association of infected and non-infected hens, he was successful in transmitting the disease to day-old chicks housed with positive-reacting hens.

Mathews (63) working with day-old chicks and infected hens failed to demonstrate *S. pullorum* in the feces of the infected hens. Fifty day-old chicks were divided into three groups. Group I was fed chick feed containing 5 per cent of fresh feces from 8 positive-reacting hens. Group II was brooded in a pen which communicated with another pen in which there were 3 positive-reacting hens. Chicks mingled with the hens freely. Group III was a control pen. At the end of two to three weeks the chicks were killed and examined bacteriologically for

S. pullorum with negative results. This experiment was repeated with 61 chicks in a similar manner with the exception that Group II was brooded by 1 positive-reacting hen. *S. pullorum* was not isolated from these chicks when killed at two to three weeks of age. In a third experiment, 8 hens were fed infective eggs. Three weeks after feeding the eggs, feces were collected from hens and 5 per cent were mixed with the chick feed and fed to 12 day-old chicks with negative results. Weldin and Weaver (97) were successful in isolating *S. pullorum* from feces of infected chicks by bacteriological methods. They also were successful in demonstrating *S. pullorum* in feces from both artificially and naturally infected chicks when feces from infected chicks were collected in tin or cardboard trays, washed off in water, and the suspension added to the drinking water of non-infected chicks. Non-infected chicks also were infected when feces from infected chicks were transferred to the floor of the pen of non-infected chicks. Dalling and Allen (20) recovered *S. pullorum* from 2 of 3 chicks which died after being placed in a box which had been left untouched for 1 month following the death of 2 chicks which had been fed a culture of *S. pullorum*.

In studying the viability of *S. pullorum*, Allen and Jacob (1) were able to recover the organism from soil samples for 10 to 14 months after artificial inoculation. Kerr (56) reports the recovery of *S. pullorum* from fecal emulsions which had been retained for more than three months. The maximum length of time in which he was able to recover the organism was 101 days.

While the results of these investigations would indicate that pullorum disease may be disseminated through the feces, the relative importance of feces as a vehicle of dissemination was not determined. To obtain further information on the importance of feces as a vehicle of dissemination, the following experiments were conducted.

Procedure

In the first experiment, pullorum disease-free birds were exposed to soil contaminated with feces from positive-reacting hens. Two groups of non-reacting hens were used. Group I (16 R.I.R. and 4 B.P.R. hens) was purchased from a breeder whose flock has been free from pullorum disease, as determined by the tube agglutination test, for 3 consecutive years. Group II (12 R.I.R. hens) was purchased from a breeder whose flock has been free from pullorum disease, as determined by the tube agglutination test, for 7 years. Both groups of birds were tested when received and were negative to the tube agglutination test.

The feces were obtained from a group of positive-reacting hens, isolated in an 8 x 12 foot house, and were collected from the dropping boards once a week. The roosts and dropping boards were screened with wire poultry netting. Two grassed plots of ground (8 x 12 feet) adjoining the house of the same size were used. The plots were not shaded but were entirely open to the sun.

Feces were scattered on Plot I at weekly intervals, beginning April 6, 1931, and continuing until November 17, 1931. The mean average temperatures for the months of April to November, inclusive, procured from the meteorological reports, Massachusetts Agricultural Experiment Station, were as follows:

Month	Mean Average Temperature	Month	Mean Average Temperature
April	46.7° F.	August	69.6° F.
May	58.1°	September	64.8°
June	66.7°	October	53.6°
July	73.1°	November	44.1°

Approximately one-third bushel of feces from the positive-reacting birds was scattered on Plot I each week for 8 weeks. Group I (20 hens) was then

placed in the house and given access to Plot I for 6 weeks. During this time Plot II received the weekly applications of feces in quantities of one-third bushel. The plots were used alternately every 6 weeks, the idle plot receiving weekly applications of feces. Group II (12 hens) was added to the flock 6 weeks after Group I was housed. Group I was exposed to the contaminated soil for 24 weeks and Group II for 18 weeks.

The hens in Groups I and II were tested by the tube agglutination test (in dilutions of 1:10 and higher) at weekly intervals for the first 18 weeks and at biweekly intervals for the remaining 6 weeks. The antigen used was identical with that used for investigation No. 3, (Non-infected females may contract pullorum disease through eating fresh eggs laid by infected hens).

In the second experiment, pullorum disease-free birds were exposed to litter contaminated with feces from positive-reacting hens. Two groups of birds were used. Group I contained 15 pullets, 3 hens, and 1 cockerel. Ten of the fifteen pullets and the one cockerel were purchased as day-old chicks from a breeder whose flock had been free from pullorum disease, as determined by the tube agglutination test, for 1 year. They were tested first when 4 weeks of age and at 2-week intervals thereafter. They were 7½ months old at the beginning of the experiment. The remainder of Group I (5 pullets and 3 hens) were originally obtained from three breeders whose flocks have been negative to the tube agglutination test for 1 or more years. They had been previously used on an experiment unrelated to pullorum disease and had always been negative to the tube agglutination test. Group II (11 hens) was purchased from a breeder whose flock had been negative to the tube agglutination test for 7 years.

An 8 x 12 foot house with a wire sun porch of the same dimensions was used. Clean shavings were used as litter. Hard grain was fed morning and afternoon in the litter. The soiled litter was replaced completely four times with clean shavings. The feces were obtained from the same group of positive reacting hens which was the source of supply in the soil contamination experiment. The duration of the experiment was from December 21, 1931, to April 25, 1932. On six dates the feces were frozen to the dropping boards when collected. The mean average temperatures for the months of December to April, inclusive, were as follows:

<i>Month</i>	<i>Mean Average Temperature</i>
December.....	31.6° F.
January.....	33.5°
February.....	26.3°
March.....	31.9°
April.....	44.4°

The coldest month was February, when the minimum morning temperature reached during the month was +3° F. and the maximum morning temperature was 34° F.

After the birds in Group I were placed in the house, approximately one-quarter bushel of feces from the positive-reacting birds was added to the litter. Then feces were added at weekly intervals for 12 weeks. At the end of the twelfth week, Group II was added and the feces were applied to the litter daily, in quantities of one to two quarts for 5 weeks. Then the experiment was terminated, due to an outbreak of laryngotracheitis in these birds.

The birds were tested by the tube agglutination test (in dilutions of 1:10 and higher) at biweekly intervals. The antigen was identical to that used in the soil contamination experiment.

Results

All birds in both experiments remained negative to the tube agglutination test.

The 62 birds (16 died during the course of the two experiments) were necropsied and *S. pullorum* was not isolated on necropsy.

Conclusion

While the number of birds was small and the duration of the experiment was not sufficient to show definitely that pullorum disease is not spread through the feces from infected hens, the results obtained would suggest that feces from infected hens are not an important vehicle of transmission to older birds.

DISSEMINATION OF *S. pullorum* INFECTION AMONG SEXUALLY IMMATURE FEMALES

Pullorum disease dissemination is a problem of great import in establishing and maintaining pullorum disease-free flocks. Investigations have shown that there are various modes of dissemination of the disease during the different ages of a bird's life. The disease may spread readily among young chicks while affected with an acute form of the disease. The causative agent has been recovered from the feces of infected chicks. Rettger (70) isolated *S. pullorum* from the feces of 2- to 3-weeks-old chicks which were artificially infected. Jones (51) observed that non-infected chicks, (24 to 48 hours old), placed in a brooder previously occupied by infected chicks would contract the disease. Chicks revealed the greatest susceptibility to infection during the first 24 hours of life. The possibilities of infection seemed to decrease as the chicks became older. Rettger and Stoneburn (73) stated that the disease may be spread by infected feed and water, hence normal chicks may acquire it by picking up contaminated feed and droppings. Doyle (27) found that day-old chicks housed with infected hens contracted the disease. Control chicks from the same hatch remained healthy for 1 month when the experiment was discontinued. Mathews (63) found that chicks (24 hours old) fed feces from infected hens, as well as chicks placed in contact with infected hens had not contracted the disease at 2 to 3 weeks of age. Mallman (61) reported that the examination of intestinal contents of chicks as a supplementary procedure to the culture of other organs increased the number of positive cases of *S. pullorum* 10 per cent. Emmel (34, 35) was able to isolate *S. pullorum* from the intestinal contents of naturally infected chicks. He found in 15 chicks which survived an attack of pullorum disease that *S. pullorum* persisted in the feces of 13 chicks for 1 week, 8 chicks for 2 weeks, 3 chicks for 3 weeks, and 1 chick for 5 weeks after the climax of the outbreak. Kerr (56) made emulsions from fecal specimens collected from natural outbreaks of disease and recovered *S. pullorum*. The organism was found to remain viable in the specimens for a period of 101 days. Weldin and Weaver (97) were able to transmit the disease to healthy chicks by placing them in contact with feces from infected chicks. Healthy chicks also contracted the disease when placed in contaminated pens, when placed with diseased chicks, and when placed in pens adjoining those containing infected chicks.

It is also known that the disease may spread among infected and non-infected adults through indirect or direct contact. Rettger, Kirkpatrick, and Stoneburn (74) observed transmission of the disease when hens that had laid infective eggs were placed among hens that did not reveal any evidence of infection according to the flock history and examination of their eggs. Doyle (27) found that the disease was not transmitted from 50 naturally infected birds to 30 healthy birds

during a period of 12 months. The birds were maintained in small houses which were cleaned out at long intervals so as to allow every opportunity of infection taking place. Edwards and Hull (30) observed that the disease may spread from infected to non-infected hens without the presence of male birds. Monthly agglutination tests extending over a period of a year revealed reactors at the third, seventh, eighth, and tenth months. Brunett (13, 14) found that the disease was not transmitted from infected to non-infected hens during a period of 7 months' contact. After the addition of 3 non-reacting mature male birds, a number of non-reacting hens became reactors. Later he observed that among 13 reacting birds and 12 non-reacting birds with 2 non-reacting males, no evidence of transmission of the infection was obtained for a period of 9 months. However, among 14 reactors and 14 non-reactors without males being present, the infection was found to have spread to 1 bird during a period of 9 months. Beach and Michael (3) reported that among 37 non-reacting hens kept in a pen with 61 reacting hens for 19 months, 12 became reactors. Kernkamp (55) found that 11 of 24 negative hens developed positive agglutination reactions while in contact with infected birds for a period of approximately 13 months. In another experiment, 8 of 17 negative hens became positive while in contact with infected birds for 9 months. *S. pullorum* was isolated from 24 per cent of the birds that were non-reacting at the beginning of the contact period. Warrack and Dalling (94) observed in an experiment of 18 weeks' duration that transmission of pullorum disease occurred among adult stock between reactors and non-reactors. Furthermore, the smaller the space in which fowls are confined, the greater is the chance of such transmission taking place.

The presence of the organism in the intestinal and reproductive tracts of infected adult birds has been observed. Kerr (56) isolated *S. pullorum* from the feces of adult birds. Miessner (65) reported that Ansorg and others observed the presence of *S. pullorum* in the cloacae of hens. Lesbouyries (58) stated that it is probable that adult birds become infected through contaminated droppings, in places where trap nests are not employed, by feed containing a debris of shells, and through feed contaminated with *S. pullorum*.

Known non-infected birds may contract the disease by eating fresh or incubated eggs laid by infected hens. Rettger and Stoneburn (72, 74) isolated *S. pullorum* from incubated infertile and fertile eggs. The organism was also recovered from fresh eggs. Jones (52, 53) was successful in isolating the organism from fresh eggs laid by fowls that had overcome the disease during chickhood. He also observed an outbreak of the disease in an acute form in adult fowls caused by the feeding of incubated eggs that contained *S. pullorum*. Mathews (63) observed an outbreak of infection in a flock as a result of feeding incubated, infertile eggs. He succeeded in bringing about infection in pullets by feeding incubated eggs laid by infected hens. Van Heelsbergen (91) reported that an important channel of pullorum disease dissemination is through so-called "egg-picking." In another part of this bulletin an investigation is reported which shows that non-infected females may contract pullorum disease through eating fresh eggs laid by infected hens.

Experimental findings concerning transmission of the disease among sexually immature pullets have not been found in our review of the literature. Pullets that had not attained egg production were regarded as sexually immature. Since a knowledge relating to the dissemination of the infection during this age might be of value in the control and eradication of the disease, the following problem was regarded worthy of investigation.

Can sexually immature pullets infected with *S. pullorum* transmit the infective agent to non-infected pullets when both groups are maintained in close contact?

Procedure of the Experiment

Twenty-four Rhode Island Red pullets (9 to 13 weeks of age) that reacted positively to the tube agglutination method were placed in contact with twenty-four Rhode Island Red pullets (8 weeks old) that were purchased from a pullorum disease-free flock and that were negative to the tube agglutination test. The birds were placed in an 8 x 12 foot house and provided with a grass range (size 30 x 40 feet). The house and range had not been employed previously for infected stock. All birds were tested at weekly intervals with the tube agglutination method in 1:10, 1:20, and higher dilutions. The antigen employed was identical with that used for Investigation No. 3. The positive reacting pullets were removed from the flock when they approached sexual maturity in order to eliminate the possibility of infective material (eggs and degenerated ova) playing a role in dissemination.

After the sixty-sixth day of the experiment, the birds had access to the range only 2 days a week, due to lack of green grass. A screen porch (8 x 12 feet) was provided for the birds when they did not have access to the range. On the sixty-ninth day one of the non-reacting pullets affected with subcutaneous emphysema was removed from the flock for treatment. This bird was retained in a cage by itself and returned to the flock after being in isolation for a period of 3 weeks.

The positive reacting pullets remained with the flock as follows: 3 for 62 days; 2 for 84 days; 3 for 105 days; and the remaining 13 for 111 days. Two positive pullets that revealed symptoms of depression, anorexia, and emaciation were necropsied on the sixty-fourth day. *S. pullorum* was isolated from the pericardial fluid, liver, spleen, and peritoneum of 1 of these birds. One positive pullet became paralyzed, was necropsied on the seventy-seventh day, and *S. pullorum* was not isolated.

The experiment extended from June 10 to December 28, 1931, inclusive. The non-reacting pullets remained negative for 111 days while in contact with the reactors and for 91 days after the positive birds had been removed. All but 2 of the non-reacting pullets had laid at the end of the experiment. One non-reacting bird was necropsied 21 days after the reactors were removed. Death was due to acute peritonitis caused by foreign material escaping through a perforation in the wall of the proventriculus.

Table 6 shows the weekly agglutination titers of the reacting pullets during the course of the experiment. The titers of the majority of the birds decreased during the course of the experiment. Thirteen birds had titers of 1:160 or higher at the time they were removed from the non-reacting birds. In a few instances, the titers fluctuated markedly during the period of observation.

Discussion

According to these findings, pullorum disease did not spread among infected and non-infected sexually immature pullets while maintained in close contact. Whether these observations approximate those which one might find among practical conditions has not been determined. The results indicate that the organism either was not eliminated by the infected birds or not eliminated in sufficient numbers to produce infection in the susceptible birds maintained under the conditions described. The presence of certain factors such as management and sanitation might exert a favorable influence on the spread of the disease. Perhaps the number of birds employed, the duration of the contact, and the post-contact periods might be influencing factors in bringing about transmission of the disease. These results are not regarded as conclusive and this problem is worthy of further consideration.

P—Titer not determined.

NT—No test.

Conclusions

1. Transmission of pullorum disease did not occur among sexually immature, reacting and non-reacting pullets while in contact for 111 days, as determined by the macroscopic tube agglutination test.
2. The serum titers of the majority of positive reacting birds decreased during the course of the experiment.
3. Fluctuation of serum titers was observed in some birds.

PATHOGENICITY OF *S. pullorum* IN RELATION TO AVES OTHER THAN CHICKENS

Pullorum disease has been reported as prevalent throughout the different continents wherever the domestic chicken is maintained. The disease is particularly prevalent in sections where there has been much traffic of poultry and where no progress has been made in its control and eradication. While the domestic chicken is regarded as the optimum host of this disease, other animals cannot be disregarded as to their relation to the causative agent. Investigators who have concerned themselves with this disease have confined their work largely to chickens. Rettger, Hull, and Sturges (77) reported the organism to be pathogenic for cats, guinea pigs, and highly so for rabbits. They found that rats were not affected. Mulrow (66) found that mature and immature rabbits, kittens, mice, rats, cats, sparrows, squabs (less than 48 hours old) and adult pigeons when fed the organism manifested no symptoms of the disease. Cats fed infected sparrows and rabbits that had died from an infection with *S. pullorum* manifested no symptoms of the disease. Mice, guinea pigs, rabbits, and sparrows inoculated intraperitoneally would in some cases succumb to the disease. The organism appeared to be highly pathogenic for sparrows. Pigeons and rats were quite resistant to the organism.

In England, Doyle (27) reported that guinea pigs are susceptible to subcutaneous and intraperitoneal inoculations, whereas ducks of all ages and by all routes are insusceptible. Rabbits were found to be very susceptible. Instillation of three drops of broth culture into the eye proved fatal. A sheep administered dead and live cultures manifested no symptoms. In Germany, Beck and Eber (4) found rabbits, mice, and canary birds to be susceptible to the disease by artificial exposure. Canary birds were found susceptible to both subcutaneous inoculation and feeding of the organism. Guinea pigs fed the organism remained healthy.

The Rhode Island Agricultural Experiment Station (80) reported an experiment on the control of blackhead in turkeys in which a heavy mortality occurred that was considered apparently due to bacillary white diarrhea. It was not stated whether the diagnosis was confirmed by bacteriological findings. A natural outbreak of the disease among domestic rabbits was reported by Olney (68). Infertile eggs, incubated for 18 days, were received from a commercial hatchery. The eggs were mixed with the mash. The disease did not manifest itself in the sucklings. A mortality of 125 among 128 rabbits was encountered. *S. pullorum* was isolated from seven rabbits examined. Hewitt (45) isolated *S. pullorum* from two turkey poults that had been hatched in an incubator previously occupied by chicks.

In Switzerland, Galli-Valerio (37) encountered a grave disease among a flock of pheasants (*Phasianus colchicus*) which he designated as white diarrhea. Low hatchability and mortality were associated with the malady. The clinical and pathologic-anatomical pictures resembled pullorum disease. The morphological and cultural characteristics of the organism isolated from the dead embryos and

chicks were identical with those of *S. pullorum*, except the organism was capable of producing indol. Carbohydrate fermentation reactions were not reported. Three adult pheasants from the infected flock were tested by the agglutination test employing an antigen containing the isolated organism. The antigen was agglutinated in a dilution of 1:25. One serum possessed a stronger titer than the other two. An organism identical to the one isolated from the embryos and chicks was recovered from the ovary of the pheasant which possessed the strongest titer. The author was of the opinion that *S. pullorum* presents a series of varieties in relation with the different avian families in which it may occur; therefore he named it *B. pullorum* var. *phasiani*.

Dalling, Mason, and Gordon (21) reported natural infection of disease among sparrows in England. Among sparrows, received from poultrymen whose chicks were affected with disease, three were found infected with *S. pullorum*. The sparrows were caught in the chicken run. The isolated organism was typical of *S. pullorum* in every respect. In Germany, Lerche (57) observed a natural outbreak of pullorum disease in two different flocks of ducklings. In the first flock the ducklings had been purchased from a hatchery. In the second flock, the ducklings were hatched in a small incubator. Hatchability and livability were affected. In earlier years losses had not occurred among the ducks. In the second flock, chicks were also affected. Necropsy and bacteriological examination of the ducklings and chicks revealed *S. pullorum* infection. The adult breeding stock (both ducks and chickens) when tested with the agglutination test revealed reactors. In England, Dalling, Mason, and Gordon (22) isolated *S. pullorum* from one of two turkey poults submitted to the laboratory for diagnostic purposes. The specimens were received from a small poultry plant where the turkeys were hatched under hens and had runs in common with the chicks. No definite evidence of pullorum disease existed on the premises, although the losses among the chicks were suggestive of the presence of this infection.

Hudson and Beaudette (49) reported the isolation of *S. pullorum* from a European bullfinch (*Pyrrhula europa*). Van Heelsbergen (91) reports that a disease among pigeons has been observed which corresponds to pullorum disease in chickens. Also in a few cases, *S. pullorum* has been found in sparrows, and their possible role in dissemination of the disease should not be excluded. Emmel (33) found pullorum disease in poults from three turkey flocks, of which two flocks had contact with infected chicks. No history concerning the third flock was obtained. Kerr (56) isolated *S. pullorum* from the liver and feces of turkey chicks. In Germany, Miessner (65) reported that the disease was observed in his investigations among ducklings, goslings, and turkey and pheasant chicks. Brunett (12) found 8 reactors among 151 adult turkeys. *S. pullorum* was isolated from 1 of 5 reactors necropsied. No reactors were detected among chickens on the same farm. Hendrickson and Hilbert (43, 44) reported outbreaks of the disease among turkey poults and pheasant chicks. The sources of infection were not definitely determined. The turkey poults which survived the acute attack of the disease were tested later and reactors were detected. Approximately, a 30 per cent mortality occurred among 575 pheasants hatched. The authors were unable to follow up these two cases due to unfavorable field conditions.

The Massachusetts Agricultural Experiment Station (47, 48, 92, 93) reports the testing of 3,021 blood samples, collected from ducks, geese, guinea fowl, jungle fowl, pheasants, pigeons, starlings, and turkeys. These birds represented a large number of farms where either infected or non-infected chickens were maintained. Three reactors were detected among the turkeys, but necropsy findings were negative. One reactor was detected among the guinea fowl, but the bird was not necropsied. No reactors were detected among the other species tested.

In Finland, Stenius (87) stated that ducklings are susceptible to the disease, while geese are believed to be immune. Whether or not mature ducks could be infected was not determined. Rabbits and guinea pigs could be easily infected when inoculated. Beach (2) reports the isolation of *S. pullorum* from turkeys, but considers the disease uncommon among this species.

While it is recognized that pullorum disease does occur among animals other than chickens, some disagreement appears to exist among the observations reported. Unfortunately, in a number of instances the information was too incomplete to determine definitely the origin of the infection. It is hoped that persons working with avian diseases will make every effort possible to determine the origin, clinical features, pathological changes, and the identity of the cause in cases that resemble pullorum disease in animals other than chickens. More information on the disease concerning susceptible hosts would be of value in its control and eradication because frequently species of fowl other than chickens are found on the same premises with the chickens. Also there appears to be a growing interest in pigeon, turkey, and game bird raising. Methods of management employed in poultry husbandry are being adapted to turkey and game bird raising. Therefore, if the pathogenicity of the organism is of some consequence in turkeys and game birds, artificial incubation and brooding and breeding on a large scale may be influencing factors in precipitating the disease which may lead to great losses.

In an effort to obtain additional information concerning birds other than chickens, the investigations have been confined to adult stock almost entirely. The birds employed were as follows: guinea fowl, pheasant, pigeon, and sparrow. The results of the investigation for each group will be discussed in the order listed.

Guinea Fowl

Twelve guinea fowl (Pearl variety) from one to two years of age were divided into two groups. Group I consisted of 6 males and Group II, of 6 females. Each bird was placed in a separate cage. All birds were tested with the tube agglutination method and were found negative for pullorum disease.

Group I was divided into four lots, the first three of which were exposed to an infective agent which consisted of a saline suspension of *S. pullorum* prepared from a 24-hour agar slant culture, with a turbidity equal to tube No. 1 of the McFarland nephelometer scale. The first exposure was on February 19, and each bird received 15 consecutive daily doses. Each bird in the different lots was exposed as follows: Lot A (2 birds, Nos. 948 and 949) was exposed by instilling 2 drops (approximately 0.03 cc.) of a suspension into the eye; Lot B (2 birds, Nos. 951 and 952) was inoculated intraperitoneally with 1 cc. of the suspension; Lot C (1 bird, No. 950) was fed 5 cc. of the suspension by introducing a pipette well into the esophagus; and Lot D (1 bird, No. 953) was retained as a control.

No external abnormal manifestations were observed during the period of the exposure. All birds were tested in dilutions of 1:10 and higher by the tube agglutination test at frequent intervals. The antigen employed for this and succeeding experiments was identical with that used for Investigation No. 3. Table 7 shows that no agglutinins were detected 4 days after the first exposure. The next test was made 3 days later, and agglutination titers were observed in sera from 2 birds inoculated intraperitoneally and from 1 infected through the ocular route. Ten days after the first exposure, all birds revealed a titer. The maximum titers were attained at approximately 3 weeks after the first exposure, while from then on the titers gradually decreased. The bird which was exposed to the organism by oral administration possessed the lowest titer. Considerable difficulty was encountered with sera becoming jellied. Towards the latter part

of the experiment, the difficulty was partly removed by collecting the blood samples in tubes containing sodium citrate solution.

On the seventeenth day of the experiment, one bird, infected through the ocular route, displayed inappetence. On the succeeding day, somnolence, marked depression and weakness were displayed, which were followed by death. Necropsy revealed pneumonic lungs, slightly enlarged and firm liver, enlarged and friable spleen, and extensive acute enteritis, with which was associated a very offensive odor. *S. pullorum* was recovered from the heart blood, liver, spleen, lungs, duodenum, and peritoneum. This strain as well as other strains isolated in these experiments was identified by morphological, biochemical, tinctorial, and serological characteristics. The serum titer extended beyond the dilution of 1:327,680.

The remaining birds were killed and necropsied 17 weeks after the first exposure. Culture material was taken from the following organs or tissues: pericardial fluid, liver, bile, spleen, testes, peritoneum, and intestine. No gross lesions were observed and *S. pullorum* was not isolated.

Group II was divided into three lots. An infective agent prepared from the same strain of *S. pullorum* and in the same manner as that used in Group I was employed. The first exposure was on March 25. Each bird received 15 consecutive daily doses, as follows: Lot A (3 birds, Nos. 954, 955, and 956) was fed 5 cc. with a pipette, which was inserted into the esophagus; Lot B (1 bird, No. 957) was inoculated intraperitoneally with 1 cc. of the suspension; and Lot C (2 birds, Nos. 958 and 959) was exposed by instilling 2 drops, approximately 0.03 cc., of a suspension into the eye. No clinical manifestations were observed at any time during the experiment. All birds were tested in dilutions of 1:10 and higher by the tube agglutination test at frequent intervals. Table 8 shows that doubtful agglutination was observed in 1 bird on the third day after exposure, and on the sixth day all but 1 bird possessed specific agglutinins. Approximately 3 weeks after the first exposure, the birds were placed together in a house (8 x 12 feet in size) which was provided with a screen porch of similar size. An effort was made to produce a favorable environment, which would stimulate egg production. Furthermore, if eggs were obtained they were to be subjected to bacteriological examination in order to determine whether the organism was being eliminated by reacting birds. Unfortunately, no eggs were laid during the course of the experiment, although at the time of necropsy a few birds showed ovarian development.

Jellied blood samples were encountered and the difficulty was corrected in the same manner as in Group I. The agglutination titers in the majority of cases attained their peak between the third and fourth weeks after the first exposure. From then on to the termination of the experiment, a rapid diminution in titers was observed in all but 1 bird which was inoculated by the intraperitoneal method. All birds were killed and necropsied approximately 12 weeks after the first exposure. Culture material was selected from the pericardial fluid, liver, bile, spleen, peritoneum, ovary, oviduct, and intestine. No significant lesions were found except in bird 959, which had one hemorrhagic ovule and yolk material in the abdominal cavity. *S. pullorum* was isolated from the yolk material and ovary. The organism was not isolated from the other 5 birds.

Pheasant

Twelve female pheasants, (*Phasianus torquatus*) one and two years old, were employed. Each bird was placed in a separate cage. All birds were found negative to the tube agglutination test. The infective agent used contained the same strain and was prepared at the same time and in the same manner as that employed for the guinea fowl in Group II. The birds were divided into four groups and each bird was exposed as follows: Group I (4 birds, 29, 31, 35, and 39) was

inoculated intraperitoneally with 1 cc. of the suspension; Group II (3 birds, 37, 38, and 40) was fed 5 cc. of the suspension by introducing the pipette well into the esophagus; Group III (4 birds, 30, 32, 34, and 36) was exposed by instilling two drops, 0.03 cc., into one eye; Group IV consisted of 1 bird, No. 33, which was regarded as a control. The first exposure was on March 24, and 15 daily consecutive doses were given. Agglutination tests, in dilutions of 1:10 and higher, were made at frequent intervals. Dilutions of 1:10 and higher were employed to determine the titer. Agglutinins were detected on the fourth day after the first exposure, and on the eleventh day all birds possessed agglutinins. The titers in some birds of Group II and III showed a rapid diminution after the third week. It appeared that the organism used as the infective agent had lost some of its virulence since it had been transferred daily for a period of time. On May 26, 4 birds (30, 34, 37, and 40) were given a second series of exposures. Each bird received 10 consecutive daily inoculations by the intraperitoneal method. A strain which was isolated from guinea fowl 949 and which was not subjected to frequent transfers was employed. The suspension was prepared in the same manner as reported earlier. All birds exposed for the second time showed a marked response in agglutinin production. No clinical manifestations as a result of inoculation were observed during the experiment. However, on May 31, bird 39 displayed mild but typical symptoms of laryngotracheitis. The diagnosis was confirmed by inoculation of susceptible chicks which showed a mild form of the disease, and shortly after recovery Dr. C. S. Gibbs of this Station found these chicks to be refractory to large doses of the pathogenic virus. Table 9 shows that a rise in titer of bird 39 occurred following the attack of laryngotracheitis. The control bird, No. 33, revealed slight agglutination in the lower dilutions on four different tests, but this was regarded as non-specific agglutination. Jellied samples also caused trouble at times, but they were almost entirely eliminated towards the end by use of sodium citrate solution.

Since the birds were maintained under such close confinement and unnatural conditions one was led to suspect that they would not lay eggs. However, on April 18, as Table 10 shows, the first egg was laid and on May 21, all but three birds had attained production. The total number of eggs recorded was 171, and of this number 148 were examined bacteriologically. Some eggs were broken and were unfit for examination. The technique in culturing the eggs was as follows: The fresh eggs were placed at 37° C. for 7 days. Then the eggs were bathed in a beaker containing 5 per cent phenol for approximately 5 minutes. In removing the eggs from the container, the excess fluid was shaken off and care was exercised not to touch the small end of the egg. This end was heated in the flame and opened with a sterile forceps. The egg was then inverted on the mouth of the bottle containing approximately 50 cc. of sterile broth. The broth and egg contents were mixed thoroughly and incubated at 37° C. for 6 days. Transfers were made to tubes of broth on the second, fourth, and sixth days. Only growth that resembled *S. pullorum* was tested for its biochemical, tinctorial, and agglutinable characteristics. Four eggs from two birds were found infected. Bird 30 did not lay infective eggs until after it had received a second exposure. The last egg from which the organism was isolated was laid on July 10, five weeks after the last exposure. It appears that the infection in the egg was the result of established systemic infection rather than an elimination of the inoculated suspension from the peritoneal cavity by way of the oviduct. The infective egg accounted to bird No. 29 was laid on June 4. The percentage (2.7) of infective eggs detected is very small as compared to percentages commonly found among eggs from reacting chickens. However, even though careful technique was employed in the culture work, it may be possible that infection in some eggs escaped our attention.

TABLE 9—AGGLUTINATION TITERS AND NECROPSIES FOR PHEASANTS (GROUPS I, II, III, AND IV)

?—Doubtful agglutination

P—Titer not determined.

J—Serum jellied.

The birds were killed and necropsied approximately 17 weeks after the first exposure. Culture material was taken from the following organs or tissues: pericardial fluid, liver, bile, spleen, peritoneum, ovary, and intestine. In some cases material was collected from the oviduct. Any other suspicious lesions were subjected to culture. Necropsy revealed characteristic gross lesions of pullorum disease in birds 29, 31, and 39 of Group I. The lesions were confined chiefly to the ovary and peritoneum. In bird No. 39, considerable encapsulated yolk material was present in the abdominal cavity. Small pieces of yolk were present in the anterior portion of the oviduct. *S. pullorum* was recovered from the peritoneum and ovary in bird No. 29, from an external abdominal abscess in bird No. 31, and from desiccated yolk in the abdominal cavity, yolk in the oviduct, and ovary in bird No. 39. Bird No. 35 did not reveal gross lesions and *S. pullorum* was not recovered.

In birds of Group II, characteristic lesions were observed only in bird No. 40. *S. pullorum* was recovered from an external abdominal cyst near site of inoculation in bird No. 37 and from the spleen, bile, and peritoneum in bird No. 40. No gross lesions were observed in No. 38 and *S. pullorum* was not isolated.

In Group III only 1 bird, No. 30, revealed characteristic gross lesions of the disease. *S. pullorum* was recovered in this bird from the liver, peritoneum, and ovary. Neither significant gross lesions were observed in birds 32, 34, and 36, nor was *S. pullorum* isolated.

In Group IV, bird No. 33 revealed no gross lesions and *S. pullorum* was not isolated.

Pigeon

Adult pigeons (King variety) which were negative to the tube agglutination test were exposed to infection by four different methods, namely, intraperitoneal inoculation, oral administration, ocular exposure, and contact with infected hens. The infective agent was a saline suspension of *S. pullorum* prepared from a 24-hour agar slant culture with a turbidity equal to tube No. 3 of the McFarland nephelometer scale. The organism used in the suspension was found to be pathogenic for mature chickens through oral administration and intraperitoneal inoculation. The pigeons were tested with the tube agglutination test at frequent intervals. Dilutions of 1:10 and higher, sufficient to determine the titer, unless stated otherwise, were employed. All birds exposed by the first three methods of exposure were placed in individual cages.

The birds were placed on experiment in three different groups. Group I consisted of 6 birds which were exposed to infection by three different methods, as shown in Table 11. Birds 1 and 2 received daily doses, 3 cc., 6 days a week for 8 weeks. At the end of the ninth week, they were placed together. Two squabs, hatched during the fifteenth week, died at 9 days of age. *S. pullorum* was not isolated at necropsy. Agglutinins were first observed 4 weeks after the initial exposure. At no time were agglutination reactions observed to be typical or complete in any dilution.

TABLE 11—DATA CONCERNING EXPOSURES, AGGLUTINATION TITERS, AND NECROPSIES FOR PIGEONS IN GROUP I

How Exposed:		Bird No.	Sex	Agglutination Reaction					
Size of Dose	Number of Doses			Maximum Titer	Weeks after Exposure	Necropsy Titer	Weeks after Exposure	<i>S. pullorum</i> Isolated

			6	M	10*	8	0	14	—

* Agglutination not complete in any dilution.

The adult pigeons were killed and necropsied 17 weeks after the first exposure. At this time both birds were negative to the agglutination test and *S. pullorum* was not isolated. Birds 3 and 4 were inoculated intraperitoneally with 3 daily doses (0.5 cc.) of the suspension. After 1 week, the inoculations were repeated. No agglutinins were detected 4 days after the first exposure, while on the seventh day agglutinins were present. During the second week, clinical manifestations (depression, weakness, ruffled feathers, and inappetance) were observed. At this time the agglutination titer attained its maximum, which was followed by a rapid decline. The birds were placed together in one cage after 9 weeks. At 17 weeks, they were killed and necropsy revealed no gross lesions. *S. pullorum* was not isolated. Birds 5 and 6 were exposed by instilling 1 drop (0.04 cc.) of the suspension into the left eye. Six daily doses per week were administered for 7 weeks. A very slight trace of agglutination was observed in the lower dilutions. The birds were placed together during the sixth week. At 14 weeks, they were killed and necropsied. No gross lesions were observed, and *S. pullorum* was not isolated.

Group II consisted of 12 pigeons, of which 10 were exposed by the same methods employed for Group I, and 2 were held as controls. Two birds were placed in each cage. The same strain as used for the guinea fowl was employed. A suspension of this strain, with a turbidity equal to tube No. 3 of the McFarland nephelometer, was found pathogenic for 3 pullets. At the end of the exposure period, the strain was tested again for its pathogenicity. A loss in pathogenicity was slightly perceptible.

Table 12 shows that 4 pigeons (3, 7, 20, and 26) were exposed to the suspension by the oral route, 4 (8, 12, 16, and 31) by intraperitoneal inoculation, and 2 (10 and 28) by ocular instillation.

TABLE 12—DATA CONCERNING EXPOSURES, AGGLUTINATION TITERS, AND NECROPSIES FOR PIGEONS IN GROUP II

How Exposed:		Agglutination Reaction							
Size of Dose	Number of Doses	Bird No.	Sex	Maximum Titer	Weeks after Exposure	Necropsy Titer	Weeks after Exposure	S. pullorum Isolated

			28	F	0	—	0	15	—

* Agglutination not complete in any dilution.

** Died.

*** Isolated from crop contents.

The daily doses for the oral route group were extended over a period of 8 weeks. Bird 3 died during the eighth week about an hour after feeding. The bird was bled at the time of feeding and no symptoms were observed. The cause of death was not determined. *S. pullorum* was isolated from the ingluvies, but not from the other organs. Birds 7 and 26 hatched 1 squab during the fifth week and 2 during the ninth week. None of the squabs survived beyond 15 days of age and *S. pullorum* was not isolated on necropsy. Complete agglutination, in any dilution, was not observed among the sera tested during the course of the experiment. Birds 7, 20, and 26 were killed and necropsied 15 weeks after the first exposure. No gross lesions were observed and *S. pullorum* was not isolated.

Birds 8, 12, 16, and 31 were given 0.5 cc. intraperitoneally for 3 successive days. These doses were repeated after 7 days. The birds were first tested on the sixth day and no agglutination was observed. On the thirteenth day, complete agglutination was produced by all sera except one, that of bird 12. This bird's maximum titer was attained during the fifth week. After the titers of all the birds had reached the maximum, a marked and rapid decline was observed. The birds were killed and necropsied 15 weeks after the first exposure. Adhesions of the peritoneum and a ruptured yolk were found in bird 12. *S. pullorum* was isolated from the yolk material. Complete agglutination was not produced by serum of this bird at necropsy. *S. pullorum* was not isolated from birds 8, 16, and 31.

The 2 birds exposed by ocular instillation received 46 daily doses (0.04 cc.) extending over a period of 8 weeks. The agglutinin response was slight in bird 10 and negative in bird 28. The birds were killed and necropsied 15 weeks after the first exposure. No gross lesions were observed and *S. pullorum* was not isolated.

The 2 control pigeons remained negative to the agglutination test during the course of the experiment. They were not killed.

Group III, 5 pigeons, was placed in contact with pullorum diseased adult chickens in an 8 x 12 foot house provided with a sun porch (8 x 12 feet). The number of pullorum diseased chickens varied from 10 to 25 during the course of the experiment. Nest boxes, for use of the pigeons, were fastened to the walls. Feed and water were provided in common with the chickens. Mash was placed in hoppers and scratch grain fed in the litter. The pigeons were tested at 4-week

intervals. Dilutions ranging from 1:10 to 1:160 were employed. In order to prevent the hens from injuring the squabs, the latter, at about 3 weeks of age, were removed from the house with their parents and returned when able to fly. The duration of the period away from the flock was approximately 3 weeks. A few birds were temporarily removed for treatment of injuries.

The 5 pigeons and their progeny hatched 30 squabs. Eight squabs (3 to 34 days of age) died during the course of the experiment. Two squabs were unfit for examination and the remaining six were necropsied. *S. pullorum* was not isolated. The duration of the experiment was approximately 15 months. All birds remained negative to the agglutination test. *S. pullorum* was not isolated from those killed and necropsied. Four pigeons (12, 13, 42, and 43) which had been in contact with the infected chickens for 462, 376, 45, and 45 days respectively, were not killed and are not included in the following table, which shows the number of days the birds were in contact with the infected chickens.

<i>Number of Pigeons</i>	<i>Days of Contact</i>	<i>Number of Pigeons</i>	<i>Days of Contact</i>
1	2	3	214

Sparrow

For this experiment, 66 sparrows (*Passer domesticus*) were caught in the vicinity of the laboratory. They were confined in metal cages and given scratch grain, grit, and water. All birds were tested by the tube agglutination test prior to the period of exposure. In bleeding the birds, difficulty was encountered in obtaining a sufficient amount of blood to test the sera in the lower dilutions. Whenever possible, dilutions of 1:25, 1:50, and 1:100 were employed. No reactors or naturally infected birds were detected among these 66 sparrows.

Six methods of exposure were employed. Forty-two birds were divided into groups, according to the method of exposure, as follows: Group I, inoculated intraperitoneally; Group II, inoculated subcutaneously; Group III, fed with a pipette; Group IV, instillation into the eye; Group V, contamination of feed; and Group VI, contamination of litter. A saline suspension of *S. pullorum* with a turbidity equal to tube No. 3 of the McFarland nephelometer was prepared from a 24-hour agar slant and used as the infective agent. The birds were tested by the tube agglutination method in dilutions of 1:25, 1:50, and 1:100. In some cases subsequent tests were made at frequent intervals and in a few instances in higher dilutions. All birds in this experiment were necropsied. Birds in the supply cages served as controls.

Clinical manifestations were detected in birds among each group. Depression, ruffled feathers, inappetence and dyspnoea were observed. Since the sparrows were frightened very easily, it was difficult to obtain the complete clinical manifestations. Symptoms were observed for a period of 4 days in some cases. No ovarian lesions were found. It is possible that due to the size of the organ, gross lesions were not perceptible. Unfortunately the determination of agglutinin production was not satisfactory because difficulty was experienced in collecting the blood, and death frequently occurred within a short time after exposure.

Table 13 shows data concerning all groups. The data include the number of sparrows treated, amount of exposure, agglutination reactions, and necropsy observations.

Among the 42 sparrows exposed to infection, 21 were not tested. The sera of 11 of the 21 tested birds contained agglutinins. *S. pullorum* was isolated from 31 of the 42 birds necropsied. No reactors were detected among the controls and *S. pullorum* was not isolated.

Discussion

According to the experimental observations, *S. pullorum* proved to be pathogenic for the guinea fowl, pheasant, pigeon, and sparrow. It appears that the guinea fowl, pheasant, and especially the sparrow are less refractory to *S. pullorum* infection than the pigeon. Among the 11 guinea fowl exposed to infection, 1 succumbed to the disease and the majority of the others revealed an agglutination titer which would suggest established systemic infection. Even though bacteriological findings were negative for *S. pullorum* at necropsy, this does not necessarily prove that the organism was not present in the body. Unfortunately it was impossible to retain the female guinea fowl longer than 12 weeks, due to a lack of facilities. It is quite possible that, since ovarian development was observed at the time of necropsy, the guinea fowl might have laid eggs at a later time. In view of the fact that *S. pullorum* was recovered from the ovary, the organism might have been eliminated in the egg if the ovary had become active in function.

The pheasant appears to be as susceptible to the disease as the guinea fowl. While some pheasants showed a marked decrease in their agglutination titers, others possessed strong titers that showed very little fluctuation. Among the latter group, *S. pullorum* was recovered from 3 of the birds at necropsy. One laid one infective egg. Hence it appears that pullorum disease manifests itself in adult guinea fowl, pheasants, and chickens quite similarly. While the complete cycle of infection has not been demonstrated in these birds, it does not seem improbable that the disease may gain a stronghold in guinea fowl and pheasant raising establishments, especially under suitable environment, and cause serious losses. Persons engaged in the raising of such fowl should respect this disease as a possible hazard to their success in the rearing of chicks from these species.

The pigeon appears to be quite refractory towards *S. pullorum* infection. Clinical manifestations were observed only in some of the birds inoculated intraperitoneally. The production of agglutinins was slightly stimulated in those birds exposed to infection by the oral and ocular routes. The one case in which *S. pullorum* was isolated from the yolk material suggests that the infection was established in the system even though the agglutination titer showed a marked decline. According to these findings, *S. pullorum* possesses but slight pathogenicity for adult pigeons. Whether similar findings would be observed among squabs cannot be stated at this time and will require further investigation.

It is evident that the sparrow cannot withstand an exposure to a relatively small number of organisms. Death occurred within a week in the majority of cases. *S. pullorum* was recovered from a large number of birds. In a number of cases the organism was recovered some time after the last exposure, indicating that the disease may follow a sub-acute or even a chronic course. Since sparrows do not appear to be capable of tolerating light exposures of *S. pullorum*, it is conceivable that these birds might become infected readily on premises where the disease is found and migrate to a place where the disease is not prevalent, thereby acting as disease disseminators. While naturally infected sparrows have

been found, it is not definitely known that the disease is disseminated by this means under natural conditions. However, the sparrow should not be overlooked as a possible complicating factor in the eradication of this disease. It may be responsible for some of the so-called "breaks" in disease-free flocks when no explanation can be presented for the introduction of the infection.

- 4—Complete agglutination.
3—Incomplete agglutination.
2—Partial agglutination.
1—Slight agglutination.
0—No agglutination.

Conclusions

1. *S. pullorum* is pathogenic in varying degrees for the guinea fowl, pheasant, pigeon, and sparrow.
2. Pullorum disease in the adult guinea fowl and adult pheasant resembles the disease in adult chickens.
3. *S. pullorum* was recovered from eggs laid by artificially infected pheasants.
4. The agglutinin production was slightly stimulated in pigeons even after long exposures to the organism.
5. Sparrows succumbed readily to artificial exposure of the organism.
6. It appears that a sound eradication program might find it expedient to recognize these aves as hosts, in addition to chickens, in combating pullorum disease.

AGGLUTININS IN CHICKS

Rettger and Harvey (71) reported on one agglutination test which was made with sera from chicks that had contracted the disease naturally. A slight reaction was obtained in a 1:50 dilution. They also observed the presence of agglutinins

in the serum of a chick artificially infected. Later Rettger, Kirkpatrick, and Jones (76) state that while the macroscopic agglutination test was of value in detecting ovarian infection of adults, it had not been of value in detecting the disease in chicks. Doyle (27) reports the detection of 11 reactors in 21 chicks, survivors of a natural outbreak, tested at 2 months of age. May and Segelin (64) state that the agglutination test performed on surviving chicks, about 3 weeks after artificial infection, revealed only sporadic reactors. Dearstyne, Kaupp, and Wilfong (23) reported testing and necropsy results on groups of chicks, the progeny of reactors, between the ages of 50 and 90 days. Reactors were found in each group of chicks. Dunlap (28) noted 2 reactors in a group of 25 artificially exposed chicks tested at 4 weeks of age.

General Procedure for the Investigations

1. Investigations concerning *S. pullorum* agglutinins in chicks were conducted over a period of approximately one and one-half years, and are reported in five parts.

2. Day-old chicks, except as otherwise described, were obtained from two flocks which had been tested for pullorum disease and had been negative for at least two successive years.

3. The method of artificial exposure which Weldin and Weaver (97) found most satisfactory was modified by using one strain of *S. pullorum* instead of two. A 24-hour broth culture of a known pathogenic strain of *S. pullorum* was used and diluted by adding 45 cc. of physiological saline solution to 5 cc. of the culture. At first a pipette and later a Luer syringe were used for oral administration of 0.1 to 0.15 cc. of the diluted culture.

4. Blood samples obtained before the chicks were 4 weeks of age were collected from the cervical blood vessels when the chicks were destroyed. Other blood samples were collected from an incision of the wing vein.

5. Tube agglutination tests were incubated 24 hours at 37° C. and 24 hours at room temperature (22°-25°C.). Readings were recorded as 4-complete; 3-incomplete; 2-partial; 1-slight; and 0-negative agglutination.

6. Necropsies were performed on all chicks which died or which were killed. Resultant *S. pullorum* cultures were subjected to morphological, biochemical, tinctorial, and serological examinations.

PART I

Consignments of chicks from 6 flocks were received at the laboratory for diagnostic purposes. In these consignments there were 15 living chicks, varying in ages from 5 to 19 days. Immediately prior to necropsy, blood samples were collected. Tube agglutination tests were made in dilutions of 1:25, 1:50, and 1:100. The results of the tests and bacteriological examinations are shown in the following table.

Flock	Age (Days)	Chicks	Agglutination	<i>S. pullorum</i> isolated
1	19	2	0	2
2	7	3	0	0
3	7	3	0	3
4	17	2	0	2
5	8	3	2-1-0*	1**
6	5	2	0	2

* Two chicks negative, one chick partial 1:25, slight 1:50, negative 1:100.

** The serum of this chick was negative.

Among 15 chicks 5 to 19 days of age, from 6 flocks, the sera of 14 chicks were negative to the tube agglutination test and *S. pullorum* was isolated from 10 chicks. The serum of 1 chick contained agglutinins, but not in sufficient quantity to produce complete agglutination, and *S. pullorum* was not isolated.

PART II

In three groups, at different times, 119 day-old chicks were exposed to artificial infection and 22 day-old chicks were used for control purposes. Among the exposed chicks, 26 died and *S. pullorum* was isolated from each of these chicks. The remainder, with the exception of 4 controls, were killed at various ages. Blood samples were obtained immediately prior to necropsy. The results of tube agglutination tests in dilutions of 1:25, 1:50, and 1:100 and bacteriological examinations of 111 chicks are shown in the following table.

Age (Days)	Chicks	Killed	Agglutination	<i>S. pullorum</i> isolated
5	Exposed	3	0	3
	Controls	0	—	—
7	Exposed	52	0	40
	Controls	10	0	0
14	Exposed	26	0	13
	Controls	5	0	0
19	Exposed	12	3-3-3*	4
	Controls	3	0	0

*Incomplete agglutination in one chick.

Among 93 artificially exposed chicks, varying in age from 5 to 19 days, no sera showed complete agglutination, and *S. pullorum* was isolated from 60. The serum of 1 chick showed an incomplete agglutination in all dilutions, and *S. pullorum* was not isolated. The 18 control chicks were negative to the tube agglutination test and to bacteriological examination.

Whole blood agglutination tests were made on 43 exposed and 4 control chicks, and all reactions were negative.¹

PART III

Chicks were hatched, in two groups, from a flock of 19 reacting hens and 1 reacting male. A few eggs for the second hatch were obtained after a non-reacting male had been added to the flock.

For the first hatch, 123 eggs were placed in a Prairie State incubator (144 egg capacity). Three eggs were broken during the incubation period. Of the remaining 120 eggs, 73 (60.83 per cent) were fertile, which yielded 22 (18.33 per cent) chicks. However, only 19 chicks were suitable to be placed under the brooder. In the second hatch, 135 eggs were placed in the incubator with the following results: three eggs were broken during incubation; 98 (74.24 per cent) were fertile and 21 (15.91 per cent) chicks were hatched. The chicks in both groups were tested with the tube agglutination test in dilutions of 1:25, 1:50, and 1:100, and higher if the titer exceeded these dilutions. Both groups were also tested with the whole blood agglutination test.¹

Group I consisted of 19 chicks. At respective ages of 3, 5, and 7 days, 3 chicks died and *S. pullorum* was isolated from 2; the remaining 16 and 2 controls of the same age were killed on the seventh day.

¹ The antigen for the whole blood agglutination test was furnished by Dr. M. Dorset, Bureau of Animal Industry, United States Department of Agriculture.

Data concerning the 9 chicks which reacted either to one or to both agglutination tests and bacteriological examinations are shown in the following table:

Chick	Whole Blood Agglutination	Tube Agglutination	<i>S. pullorum</i> isolated
4	Suspicious	4-4-0	—
8	Positive	4-4-1-0	+
10	Positive	4-2-0	+
11	Negative	2-1-0	—
12	Negative	3-2-0	+
13	Negative	3-1-0	+
15	Negative	4-2-0	—
16	Suspicious	4-2-0	+
7	Negative	1-0-0	+

S. pullorum was isolated from 6 of the 9 chicks whose sera showed agglutinins. *S. pullorum* was isolated from 7 chicks which did not react to either one of the tests. The 2 controls were negative to both of the tests and to bacteriological examination.

Group II consisted of 21 chicks. At the ages of 7 and 10 days 2 chicks died and *S. pullorum* was isolated from both. The remaining 19 and 5 controls of the same age were killed on the fourteenth day. A slight reaction to both tests was shown by 1 chick, and *S. pullorum* was not isolated. In a second chick agglutinins were indicated to be present by the tube test, but not by the whole blood test, and *S. pullorum* was isolated. To both agglutination tests, 17 chicks were negative, and *S. pullorum* was isolated from 7. The 5 controls were negative to both of the agglutination tests and to bacteriological examination.

PART IV

A group of 52 day-old chicks was exposed to artificial infection. Up to 4 weeks of age, 20 died and *S. pullorum* was isolated from each chick. Beginning at 4 weeks of age, the chicks were tested by the tube agglutination test at weekly intervals. Dilutions of 1:10 and higher, sufficient to determine the titer, were employed. A chick whose serum produced partial, incomplete, or complete agglutination in a dilution of 1:20 or higher was considered to be a reactor. Immediately upon detection, reactors were isolated in individual cages, and the pen was cleaned thoroughly. On the first test 6 reactors were detected. Reactors appeared at each test up to and including the test made at 11 weeks of age. No additional reactors appeared at later tests. A total of 24 reactors was detected among the 32 chicks.

Observations concerning 23 chicks made during the period between the fourth and fifteenth weeks are shown in Table 14.

S. pullorum was isolated from 6 non-reactors and 1 of 3 reactors which died. At the age of 11 weeks it was necessary to kill 2 chicks, and at the age of 15 weeks 12 males were killed. Of these 14 chicks, 10 were considered to be reactors and 4 non-reactors at the time of necropsy. Among these 4 non-reactors, 3 (Nos. 26, 33, and 41) had been considered to be reactors at earlier tests. *S. pullorum* was isolated from 3 reactors among these 14 chicks.

Observations were continued on the 8 reactors (pullets) and 1 non-reactor (a cockerel) beyond the fifteenth week. The cockerel was negative to the tube agglutination test up to 6½ months, at which age it was killed, and *S. pullorum* was not isolated. The 8 pullets were to be retained in individual cages until 2 months after sexual maturity was attained. (A pullet was considered sexually mature when it laid its first egg.) Table 15 contains observations and data concerning the 8 pullets.

* Not considered a reactor at any time.

** Titer not sufficient to be considered a reactor.

Sexual maturity was attained by 5 birds which were killed 2 months afterward, and *S. pullorum* was isolated from 2. The agglutination titers of the 3 birds from which *S. pullorum* was not isolated gradually became lower, and the birds were not regarded as reactors at the time of necropsy. Birds 21, 35, and 49 did not attain sexual maturity, and *S. pullorum* was isolated from each.

* Died.

PART V

A lot of 129 day-old chicks was divided into two groups. Group A, consisting of 75 chicks, was exposed to artificial infection. Group B, consisting of 54 chicks, served as controls.

The chicks in Group A did not show clinical symptoms of pullorum disease. On the day following exposure, 1 chick died and *S. pullorum* was not isolated. This was the only mortality up to 2 weeks of age. A possible explanation of the failure of this group of chicks to react to the exposure in the same manner that chicks in Part IV reacted is that the size of dose was less, the chicks may have been slightly older and more resistant, and the pathogenicity of the strain may have changed. Then 24 chicks from Group A were placed in a separate pen and designated as Group A-1. Each chick in Group A-1 was subjected to a second exposure consisting of 0.2 cc. of a 48-hour broth culture. Beginning at 4 weeks of age, all chicks in Groups A and A-1 were tested by the tube agglutination test, at weekly intervals, except as otherwise noted. A sufficient quantity of *S. pullorum* antigen was prepared for the duration of the experiment. Dilutions of 1:10 and higher, sufficient to determine the titer, were employed. A chick

* Not considered a reactor at any time.

** Agglutination not complete in 1:20 and higher dilutions.

whose serum completely agglutinated the antigen in a dilution of 1:20 or higher was considered to be a reactor. Immediately upon detection, reactors were isolated in individual cages and the pens were cleaned thoroughly. After all of the reactors were detected, the non-reactors were tested at biweekly intervals.

Group A consisted of 50 chicks which were subjected to one exposure. At the age of 23 days, 1 chick died and *S. pullorum* was isolated. All the reactors, 16 in number, were detected by the end of the ninth week. Observations concerning 32 chicks made during the period between the fourth and eighteenth weeks are shown in Table 16.

S. pullorum was isolated from 2 of the 5 non-reactors and from both of the reactors which died. Of the 19 non-reactors which were killed, *S. pullorum* was isolated from 1 (No. 302). This chick had been considered a reactor in earlier tests. *S. pullorum* was isolated from 3 of the 6 reactors which were killed.

At the end of the eighteenth week, 10 non-reacting and 7 reacting pullets remained in Group A. The non-reacting pullets were placed in individual cages at the age of 5 months and, with one exception, were retained until at least 1 month after having attained sexual maturity. This 1 bird was killed because of infectious laryngotracheitis at approximately 9 months of age. The agglutination reactions indicated these 10 birds to be non-reactors at all tests, and *S. pullorum* was not isolated.

Data concerning the 7 reacting pullets are shown in Table 17.

TABLE 17—SEROLOGICAL AND NECROPSY DATA CONCERNING SEVEN PULLETS EXPOSED TO ARTIFICIAL INFECTION AS CHICKS (PART V)

Pullet No.	Age when Detected as Reactor	Maximum Titer	Agglutination Reaction				<i>S. pullorum</i> Isolated	
			Age	At Maturity		At Necropsy		
				Titer	Age	Titer		Age
	Weeks		Weeks	Weeks	Weeks			
249	6	10,240	40	10,240	41	+
276	5	2,560	6 & 20	1,280	30	1,280	35	—
279	8	320	20	80	41	+
287	8	2,560	32, 33 & 34	320	30	640	40	+
299	5	1,280	6	40	26	20	36	—
300	4	80	4-6 inc.	10	27	40	37	—
308	9	1,280	10	80	29	80	36	+

Sexual maturity was attained by 5 birds, which were killed 2 months later, and *S. pullorum* was isolated from 2. The agglutination titers of 2 of the other 3 birds gradually became lower. At the age of 41 weeks, the 2 pullets which had not attained sexual maturity were killed, and *S. pullorum* was isolated from both.

Group A-1 consisted of 24 chicks which were subjected to two exposures. By the end of the ninth week, 11 reactors were detected. Observations concerning 14 chicks, made during the period between the fourth and eighteenth weeks, are shown in Table 18.

S. pullorum was isolated from 1 (No. 253) of 7 non-reactors and from 2 of 7 reactors. The sera of 3 (Nos. 257, 270, and 273) of the 7 reactors did not produce complete agglutination in some of the tests prior to necropsy.

At the end of the eighteenth week, 6 non-reacting and 4 reacting pullets remained in Group A-1. The non-reacting pullets were placed in individual cages at the age of 5 months and, with two exceptions, were retained for at least 1 month after having attained sexual maturity. The first of these 2 was killed because of "paralysis" at approximately 5 months, and *S. pullorum* was not

TABLE 18—SEROLOGICAL AND NECROPSY DATA CONCERNING FOURTEEN ARTIFICIALLY EXPOSED CHICKS (PART V)

273	M	7	640	7	Killed	40**	18	—

* Not considered a reactor at any time.

** Agglutination not complete in 1:20 and higher dilutions.

isolated. The second was killed because of infectious laryngotracheitis at approximately 9 months. Extensive lesions suggestive of pullorum disease were observed, and *S. pullorum* was isolated. The agglutination titer of this bird had been considered as suspicious on several tests. At necropsy, its serum completely agglutinated *S. pullorum* antigen in the 1:20 dilution. *S. pullorum* was not isolated from the other 4 non-reacting pullets.

The 4 reacting pullets in Group A-1 were killed 2 months after having attained sexual maturity, and data are presented in Table 19. *S. pullorum* was isolated from 2 birds. The agglutination titers of the other 2 gradually became lower, and they were not regarded as reactors at the time of necropsy.

TABLE 19—SEROLOGICAL AND NECROPSY DATA CONCERNING FOUR PULLETS EXPOSED TO ARTIFICIAL INFECTION AS CHICKS (PART V)

Pullet No.	Age when Detected as Reactor	Maximum Titer	Age	Agglutination Reaction				S. pullorum Isolated
				At Maturity		At Necropsy		
				Titer	Age	Titer	Age	
		Weeks		Weeks		Weeks		
255	5	640	6	0	27	10	36	—
256	5	5,120	6	160	27	320	37	+
258	4	1,280	5 & 6	160	29	320	40	+
275	9	80	9, 33, 34 & 36	10	32	10	41	—

The 54 control chicks were tested at biweekly intervals after the age of 5 weeks. At the age of 3 months, all but 10 pullets were used for other purposes. These 10 birds were retained until approximately 8 months of age, when all but 2 had attained sexual maturity. No reactors were detected among these controls at any time.

Discussion

S. pullorum infection was suspected to be present in the 15 chicks, 5 to 19 days of age, of the miscellaneous consignments on account of the histories and

the suggestive lesions at necropsy. The tube agglutination test did not show agglutinins to be present in the 10 chicks from which *S. pullorum* was isolated. The 1 chick whose serum contained agglutinins, but not in sufficient amount to bring about complete agglutination, was negative to bacteriological examination.

Among a larger number, 93, of artificially exposed chicks destroyed at the same ages as those of the miscellaneous groups, the serum of only 1 chick contained agglutinins. Again the agglutinins were not present in sufficient amount to cause complete agglutination of the antigen, and the chick was negative to bacteriological examination. Whole blood agglutination tests, made on 43 chicks, were negative. Upon bacteriological examination *S. pullorum* was isolated from 60 of these 93 chicks.

In two hatches from a flock of reacting hens, the tube agglutination test showed agglutinins to be present in varying titers in the sera of 9 of the 16 chicks killed at 7 days of age, and in 2 of the 19 chicks killed at 14 days of age. Among the chicks which reacted, *S. pullorum* was isolated from 6 of the 9 and from 1 of the 2. *S. pullorum* was also isolated from 5 of the 7 and from 7 of the 17 chicks which did not react. Agglutinins were detected by the whole blood agglutination test in 4 of the 9 and in 1 of the 2 chicks which reacted to the tube agglutination test. No reactions were noted by the whole blood method in chicks that were negative to the tube test.

Observations based upon these relatively small numbers of chicks in the three groups appear to indicate that specific agglutinins are present in only a small number of chicks which harbor *S. pullorum* before the age of 2 or 3 weeks. Specific agglutinins sufficient to bring about complete agglutination appeared as early as the seventh and fourteenth days in a few chicks from reacting hens. However, the number of chicks which were found to be bacteriologically positive was larger than the number which reacted to the agglutination test. There appeared to be no relation between the presence of agglutinins in the sera and the demonstrable presence of *S. pullorum* organisms in chicks less than 3 weeks of age.

In the 52 chicks of Part IV, which had been exposed to artificial infection the suggestive clinical symptoms and lesions were confirmed by bacteriological examination in a majority of cases. Agglutinins were present in a few chicks at the time of the first test, i.e., at 4 weeks of age. Agglutinins continued to appear in other chicks up to the end of the eleventh week, but not thereafter. Between the fourth and the eleventh weeks of age, 24 reactors were detected among the 32 chicks tested. It appeared that agglutinins required variable periods of time for development. Marked lowering of the agglutination titers occurred in some instances and suggests an ability on the part of some infected chicks to overcome *S. pullorum* infection. Agglutinins did not disappear entirely from the sera of the 8 reacting pullets. *S. pullorum* was not isolated from the 3 pullets which had the lowest agglutination titers at the time they were destroyed. These 3 came into production earlier than those pullets from which the organism was isolated. It is also noted that *S. pullorum* was isolated from 3 pullets which failed to come into production.

During a period of 2 weeks following artificial exposure, no suggestive symptoms appeared among a group of 75 chicks. Bacteriological examinations showed *S. pullorum* to be present in 13 of the 50 chicks (Group A) subjected to one exposure and in 6 of the 24 chicks (Group A-1) subjected to two exposures. In both groups there were a few chicks whose sera contained *S. pullorum* agglutinins as early as the fourth week of age. In Group A all of the reactors, 16 in number, were detected by the end of the ninth week of age. In Group A-1 there were 12 reactors and 11 of these were detected by the end of the ninth week. The additional reactor in the latter group was detected at the test at the time of necropsy, at 9 months of age, although on some of the earlier tests this pullet had been

regarded as suspicious. It appears that the tube agglutination test is capable of detecting the infected chicks, with few exceptions, when the test is applied to artificially exposed chicks between the ages of 4 and 11 weeks. Lowering of agglutination titers even to the point of disappearance occurred in a small number of chicks, and upon failure to isolate *S. pullorum* was regarded as indicative of recovery from the disease. Again *S. pullorum* was isolated from the 2 pullets which failed to come into production.

Conclusions

1. Although *S. pullorum* agglutinins sufficient in amount to establish a diagnosis were not present in the sera of 15 chicks from 5 to 19 days of age, *S. pullorum* was isolated from 10 of the chicks.

2. *S. pullorum* agglutinins sufficient in amount to establish a diagnosis were not present in the sera of 93 artificially exposed chicks from 5 to 19 days of age. *S. pullorum* was isolated from 60 of the chicks.

3. In the sera of some chicks, 7 and 14 days of age, hatched from eggs from reacting hens, *S. pullorum* agglutinins were present in sufficient quantity to establish a diagnosis, and *S. pullorum* was isolated from some chicks which did not show agglutinins.

4. In three groups of chicks, all reactors were detected, with one exception, by the end of the eleventh, ninth, and ninth weeks, respectively.

5. Some reactors detected between the fourth and ninth weeks of age later became non-reactors, and *S. pullorum* was not isolated upon necropsy.

6. *S. pullorum* was isolated from non-reacting chicks up to 8 weeks of age.

AVENUES OF INFECTION

Investigations have definitely established the fact that pullorum disease is disseminated among live poultry, including both immature and adult stock. The disease has also been reproduced through artificial means of exposure. Rettger (70) in his first report concerning pullorum disease observed that the malady could be reproduced in young chicks (2 to 4 weeks of age) by subcutaneous inoculation with pure culture of the causative organism. Later Rettger, Kirkpatrick, and Card (79) were successful in producing infection by inoculating the organism into the oviduct. They reported that the male plays an important role in the transmission of the disease from diseased to normal hens according to circumstantial evidence, and that the probability of oviduct infection being brought about in any other way, as for example through infected litter, appears quite remote. Dalling and Allen (20) also demonstrated that the disease could be reproduced in young chicks by subcutaneous inoculation. They found that chicks fed 0.5 cc. of a saline suspension of live culture (one billion organisms per cubic centimeter) would succumb to the disease. Feeding of broth cultures also produced death. They reported that an amount as small as 0.0001 cc. of a suspension containing one billion organisms per cubic centimeter produced death in one of the two chicks fed. It was concluded that a correlation existed between the age of the chick and the tolerance for the dose of infective agent.

Doyle (27) showed that adult fowls could be infected by subcutaneous and intravenous inoculations with broth cultures of the organism. The disease was also reproduced through oral administration and oviduct inoculation of the organism. The organism was pathogenic for chicks when fed or inoculated subcutaneously in doses as small as 0.001 cc. Chicks were also infected by instilling into the eye a couple of drops of broth culture. Gwatkin (39) in feeding adults

with an aqueous suspension of *S. pullorum* found that agglutinins appeared in the blood stream within 3 to 12 days. Hinshaw, Upp, and Moore (46) were able to infect half-day-old chicks by either swabbing or inoculating the organism into the nostrils. Tittler (89) advanced the hypothesis that pullorum disease may be disseminated by moisture exhaled from an infected lung of a chick and inhaled by a normal chick. Beck and Eber (4) were successful in reproducing the disease in adult hens by subcutaneous inoculation, but not by intravenous or oral administration. Five chicks, two days of age, succumbed to the disease when 2 drops of a suspension of the organism were instilled into the nostrils. Doyle and Matthews (26) reported that exposure of chicks to alfalfa dust containing *S. pullorum* caused typical pulmonary lesions of pullorum disease. Of the 21 chicks which had been exposed to dust containing *S. pullorum*, 76 per cent developed typical gross lung lesions of pullorum disease. In the control group, no lesions suggestive of the disease were observed. Gwatkin and Glover (41) isolated *S. pullorum* from the nasal passages of two among 61 adult birds examined.

Edwards and Hull (30) fed 16 pullets and 16 cockerels (9 months old) with a saline suspension of *S. pullorum* having a density equal to 0.25 on the McFarland nephelometer scale. Each pen was given 500 cc. of the suspension. An acute infection was produced. Agglutinins were detected on the first test 7 days after feeding, and on the fourteenth day 16 birds reacted. Seven birds became permanent reactors and from them *S. pullorum* was isolated. Miessner (65) reported that Ansorg, Nussfog, and Hof found *S. pullorum* in the cloacae of live hens. Weldin and Weaver (97) found that infection may result from the entrance of the organism into the respiratory tract as well as into the alimentary tract, but they believe that the seat of post-hatching infection is more often in the digestive tract than in the respiratory tract. They also reported that chicks inoculated intratracheally revealed no pulmonary lesions, but 2 chicks fed capsules containing the organism showed a pulmonary infection. They stated that "quite evidently infection can take place in the chick regardless of portal of entry."

While it is apparent that *S. pullorum* may gain entrance into the body through various channels, more information concerning these channels and other possible avenues of infection would contribute to the knowledge on dissemination, control, and eradication of the disease.

Procedure of the Experiment

Four different avenues for introducing infective material were selected, namely, instillation into the eye; oral administration; inoculation into the cloaca; and instillation into a skin incision on the plantar surface of the foot. Thirty-five Rhode Island Red birds were divided into three groups and each group was exposed to the infective agent on a different date. Recovered *S. pullorum* strains in these experiments were identified by morphological, biochemical, tinctorial, and serological characteristics.

Group I, consisting of 4 pullorum disease-free pullets (approximately 10 months of age) was exposed to infection by the ocular route. The birds were placed in individual cages and divided into two lots with 2 birds in each lot. The infective agent was a saline suspension of a 24-hour agar growth adjusted to a turbidity of tube No. 3 of the McFarland nephelometer. One strain of *S. pullorum* recently isolated from the ovary of a hen was employed. The suspension was administered by placing 2 drops (approximately 0.08 cc.) on the conjunctiva of the left eye. Agglutination tests were made at frequent intervals to determine the immunological response to the infection. Dilutions of 1:10 and higher were employed to ascertain the titer. Birds in both lots were first exposed to infection on January 26.

The birds in Lot A were given 2 series of 6 consecutive daily doses. These 2 series of doses were separated by 1 day. Table 20 shows that no agglutinins were observed 4 days after the first exposure. On the seventh day, agglutinins were present in both birds and persisted until the time the birds were necropsied. One bird manifested a marked inflammatory reaction of the structures within the periorbita of the infected eye. Bird No. 1 was killed and necropsied at the end of 8 weeks. Peritonitis and ovarian lesions were observed. *S. pullorum* was isolated. Bird No. 2 appeared listless and anemic 10 weeks after the first inoculation. At this time an inspissated egg was expelled. Death occurred on April 17. Necropsy revealed an enlarged, friable, and mottled liver with a rupture of the right lobe. Pericarditis and peritonitis were also observed and *S. pullorum* was isolated.

Birds in Lot B were given two series of 3 consecutive daily doses a week apart. Table 20 shows that agglutinins were observed at the same time as in Lot A, but in a lesser amount. Bird No. 3 manifested an inflammatory reaction in the periorbital structures with an extensive involvement of the inferior palpebra. Bird No. 3 was killed and necropsied on March 25. Necropsy findings revealed an enlarged, hemorrhagic liver, and two ovules, one being hemorrhagic and the other misshapen. Bird No. 4 was killed and necropsied May 14. Extensive peritonitis and misshapen, inspissated ova were observed. *S. pullorum* was isolated from both birds.

Group II consisted of 16 pullorum disease-free Rhode Island Red cockerels (approximately 2½ months of age), divided into four lots. Factors such as size and general condition of the birds were considered in selecting the birds for the different lots. All birds were placed in individual cages. The infective agent employed consisted of a saline suspension prepared from a 24-hour agar growth and adjusted to a turbidity ranging between 1.5 and 1.75 on the McFarland nephelometer scale. The organism used was a strain recently isolated from a chick (2½ months of age). Birds in Lots A, C, and D were exposed to infection through the ocular route. Birds in Lot B received the infective material per orem. The first dose for all lots was given on August 10. The size of the daily dose was practically the same for all birds (0.03 cc.). All birds were tested by the tube agglutination method at approximately weekly intervals in dilutions of 1:10 and higher, sufficient to determine the titer. The birds were killed and necropsied approximately 10 weeks after the first exposure. The following tissues were placed on culture medium: pericardial fluid, liver, and spleen from all birds and testicles, heart, and kidney from some birds. The *S. pullorum* strains isolated were tested for colonial, tinctorial, biochemical, and agglutinable characteristics.

Lot A consisted of 5 birds which received 6 consecutive daily doses. Clinical manifestations, such as increased lacrimation and infiltration of the structures in the periorbita, were observed approximately 2 weeks after the first exposure. These gross pathological changes disappeared after 4 weeks. Table 21 shows that agglutinins were present 7 days after the first exposure. All birds developed a serum titer of 1:640 or higher during the period of observation. Two birds (Nos. 194 and 225) revealed lesions. In bird 194 a pericarditis, abscesses in the heart muscle, enlarged spleen, and peritonitis were observed. In bird 225 the changes were confined to the heart and pericardial sac. *S. pullorum* was isolated from birds 194 and 224.

Lot B consisted of 5 birds which received 6 consecutive daily doses. Each of the individual doses was diluted with 1 cc. of sterile saline in order to facilitate the administration per orem. The suspension was administered by inserting a 1 cc. pipette into the esophagus. No clinical manifestations were observed in these birds. Table 21 shows that agglutinins were detected in bird 188, 10 days after the first exposure. Bird 216 possessed agglutinins 17 days after the first

exposure. No agglutinins were detected in birds 195 and 227. Bird 209 revealed a weak titer. No significant lesions were observed on necropsy. *S. pullorum* was isolated from one bird, No. 188.

Lot C consisted of 3 birds which received 3 consecutive daily doses. Bird 205 manifested a local inflammatory reaction around the eye exposed to the inoculum. Recovery was complete 4 weeks after the first exposure. All birds in this lot possessed agglutinins 7 days after the first exposure. Table 21 shows their weekly sera titers. Cardiac lesions commonly found in pullorum disease were present in birds 200 and 205. *S. pullorum* was isolated from bird 200.

Lot D consisted of 3 birds which received 1 dose of the suspension. Clinical manifestations which consisted of a general systemic reaction and inflammatory changes in both eyes were observed in bird 189. It was not definitely proved that the reaction in both eyes was caused by pullorum infection. Bird 211 showed a local reaction in the eye used for inoculation. Table 21 shows that agglutinins were present 7 days after the first exposure and persisted during the course of the experiment. Cardiac lesions were present in all birds. In bird 189, the parenchyma of the liver was friable with ecchymotic hemorrhages present on the surface. A nephritis and enteritis were also observed. *S. pullorum* was isolated from birds 189 and 234.

In birds 194, 200, 224, and 234, *S. pullorum* was isolated from the pericardial fluid only. In bird 189, the organism was isolated from the heart and spleen and in bird 188 from the spleen only.

Group III consisted of 15 pullorum disease-free Rhode Island Red birds, approximately 3 months old which were divided into two lots. All birds were retained in individual cages. Two avenues of exposure were employed, namely, instillation of the infective agent into an incision in the skin of the plantar surface of the foot and inoculation into the cloaca. The former avenue was selected because occasionally birds show an enlargement of the foot, with a scab attached to the plantar surface. *S. pullorum* has been isolated from a case of this type. Whether *S. pullorum* infection is the primary or secondary cause in such cases cannot be stated. However, it appears plausible for the organism to enter the body if the continuity of the skin is broken resulting in either localized or generalized foci of infection.

The infective agent was a saline suspension prepared from a 24-hour agar slant culture with a turbidity with a range between 1.5 and 1.75 on the McFarland nephelometer scale. Quantitative determinations revealed that the different suspensions varied from 550 to 710 million organisms per cubic centimeter. The strain used was the same as employed for Group II. The size of the dose was approximately 0.03 cc. The birds were tested with the macroscopic agglutination test at weekly intervals. Dilutions of 1:10 and higher, sufficient to determine their titers, were used. All birds were killed and necropsied approximately 10 weeks after the first exposure with one exception. This bird died 3 weeks after the first exposure. Culture material was taken from the pericardial fluid, liver, and spleen in all cases. Other tissues which appeared infected were also cultured. Strains resembling *S. pullorum* were examined in the same manner as those isolated in Group II.

Lot A consisted of 5 cockerels which were exposed to infection by placing the inoculum in an incision in the skin of the plantar surface of the foot. Two incisions, extending through the cutis, were made with a sharp pointed knife. The incisions were approximately 0.5 cm. in length and bisected each other at right angles. The date of the first exposure was August 31. The inoculum was not completely absorbed in some cases because the dose (0.03 cc.) appeared to be too large. Furthermore, the incision was disturbed at the time the second, third, and fourth doses were administered which caused a slight hemorrhage,

making it difficult to determine the amount of inoculum entering the incision. Each bird received four doses. An acute inflammation was observed in the region of the metatarsal joint in all individuals. The inflammatory changes consisted of enlargement, tenderness, and discoloration of the structures. In one bird the tarsal joint was enlarged. The birds were prone to sit down and if in a standing position very little if any body weight was placed on the inoculated foot. One bird, No. 228, died on September 19. Necropsy findings revealed that death was due to a septicemic form of the disease. *S. pullorum* was obtained from the pericardial fluid, liver, spleen, peritoneum, bone marrow, tarsal joint, and digital cushion. Approximately 4 weeks after the first exposure, the clinical manifestations had subsided.

Table 22 shows that agglutinins were first observed 10 days after the first exposure. The maximum titers in all cases occurred approximately 2 weeks after the first exposure. Necropsy findings revealed in all birds a proliferation of the tissues in the region of the metatarsal joint and in one bird (206) an acute pericarditis. *S. pullorum* was isolated from the latter bird only.

Lot B consisted of 10 birds (4 females and 6 males) which received the inoculum in the cloaca. The walls of the cloaca were separated by traction on the borders of the anus. The inoculum was retained as far as could be determined. In a few birds a slight congestion of the cloacal mucosa was observed. Table 22 shows that a trace of agglutinins was observed on the sixth day after the first exposure and on the eighth and tenth days agglutinins were well established in all the birds. Although agglutinins appeared earlier than in Lot A, the titers were neither as strong nor as persistent. Necropsy findings revealed no significant lesions except in one bird. This bird, No. 221 (male) showed an acute pericarditis. *S. pullorum* was isolated from this bird only.

Summary and Discussion

In Group I ocular inoculation caused an acute local reaction in the tissues within the periorbita as well as a stimulation for the production of agglutinins. Agglutinins were present approximately 7 days after the first exposure. Infection was definitely established with characteristic lesions of the disease. *S. pullorum* was recovered from all birds.

In Group II the birds inoculated by the eye route manifested clinical symptoms similar to birds in Group I, but less pronounced. This also was true in the lesions observed and in the recovery of *S. pullorum*. Agglutinins were present in all birds at approximately 7 days. In the birds which were fed the organism, agglutinins appeared at approximately the tenth day in 1 bird. Agglutinins were detected in 3 of the 5 birds during the experiment. No significant lesions were observed at necropsy and *S. pullorum* was isolated from one.

In Group III, the birds, inoculated into the skin incision, all revealed agglutinins at approximately the tenth day after the first exposure. Severe inflammatory reactions were observed in the region at the point of exposure. Gross lesions were not common and *S. pullorum* was isolated from 1 bird. The birds inoculated into the cloaca possessed agglutinins at approximately the sixth day after the first exposure. At necropsy gross lesions were observed and *S. pullorum* was isolated from 1 bird only.

From these observations, it is apparent that birds may become infected when the organism comes in contact with the conjunctiva. In what manner the organisms enter the body cannot be stated at this time, but it does not appear that all or any part of the inoculum passed through the lacrimal duct into either the respiratory or digestive passages and entered the body along those channels. The structures within the periorbita reacted to the infective agent, as manifested

TABLE 22.—AGGLUTINATION TITERS AND NECROPSIES FOR BIRDS IN GROUP III

by inflammatory changes, and this suggests that the organisms may have entered the conjunctiva or associated structures. In birds exposed to the organism by the ocular route, agglutinins appeared in the blood stream around the seventh day, whereas in those birds exposed by oral administration, agglutinins appeared around the tenth day. In all birds exposed by the ocular route agglutinins were produced, while in the orally exposed group some birds did not produce agglutinins. Gross lesions were more common and the percentage of isolation of *S. pullorum* was higher in the ocular exposed group. The occurrence of infection through the ocular route appears to be possible under natural conditions. Contaminated litter, feed, and droppings coming in contact with the eye might lead to the establishment of infection in the body. It is possible that this avenue of infection might play a role in the dissemination of the disease among chicks in the incubator, especially in the forced draft type where hatching debris is more or less in constant circulation and in that way comes in contact with the eye of the chick.

While agglutinins appeared earlier in the birds exposed through the cloaca than in the birds exposed through the skin incision, yet the persistency and the strength of their titers were not as great. The infection did not appear to be as well established in the group exposed through the cloaca. Exposure to infection through these channels demonstrates that even though the organism did not become permanently established in the body, agglutinins existed to indicate that transient infection had been present. Also it may be possible that even through the use of the most careful and thorough necropsy technique, the recovery of the organism from some reacting birds may meet with failure. Under natural conditions with suitable environment, it appears possible that birds might contract the disease through these channels.

In comparing the four different avenues as to the ease with which the organism may enter the body, no direct comparisons can be made since the different avenues were not all tested at the same time and under identical conditions. However, the results suggest that birds might be more subject to contracting the disease, if exposed through the eye route than through the other avenues studied. Infection appears to occur less readily when the organism is administered through the oral route than through the other avenues.

Conclusions

1. Pullorum disease can be reproduced in chickens by dropping a suspension of the organisms on the conjunctiva, into an incision in the skin of the plantar surface of the foot, into the cloaca, and by oral administration.
2. The introduction of organisms through the oral route did not appear as successful in reproducing the disease as the other avenues of exposure which were studied.
3. It appears possible that pullorum disease dissemination may occur through all these avenues under natural conditions where a suitable environment exists.

OBSERVATIONS CONCERNING DIAGNOSTIC TESTS FOR PULLORUM DISEASE

Since pullorum disease is inherent in character and may exist in apparently normal birds, the fact has become recognized, as supported by an abundance of data, that the disease can be eradicated by detecting the infected adult birds. Various methods of detecting such birds have been investigated. According to

investigations and results in eradication, the macroscopic agglutination method is the most efficient and the most extensively employed. Jones (52) was the first to employ the macroscopic tube agglutination test for the detection of infection in adult birds. Runnells and others (81) recommended the rapid serum agglutination test for pullorum disease eradication. Investigations concerning their relative merits have shown that properly trained persons can use the two methods in the diagnosis of the disease with nearly the same degree of efficiency.

Bunyea, Hall, and Dorset (15) first described the rapid whole blood agglutination test. They employed a concentrated unpreserved live antigen and whole blood. Blood smears were made upon a glass surface to which the test fluid was added and mixed. A clumping of the bacteria within a certain time limit was regarded as a positive reaction. The testing of whole dry blood was also described. The authors found the results of this method to check quite closely with the results of the tube method. Sawyer and Hamilton (84) reported that an antigen prepared by a biological house for the whole blood test and placed in the hands of a poultryman gave the following results: among 26 birds tested, 6 were diagnosed as reactors. Necropsy revealed that 13 birds contained *S. pullorum*. Green and Robinson (38) reported the whole blood test very satisfactory, although in some cases they found that birds with low titers might escape detection. They stated that much more work is necessary before one can determine the real value of this type of test. Bleecker (8) tested 2,159 blood samples with the whole blood and tube methods. The whole blood method was regarded as but slightly less efficient. Schaffer and others (85) described changes in the technique for the preparation of the antigen and the method of conducting the test. They recommended a stained, preserved antigen and the employment of a loop for measuring and conveying the fresh blood to the testing plate. Various degrees of reactions which occur in the tube method were reported. Reactions which occur within one minute after mixing the antigen and blood were regarded as positive, whereas those reactions appearing more slowly were considered as suspicious. The loop method was recommended to insure a constant dilution of antigen and blood. Coburn and Stafseth (18) described the preparation of stained antigen and technique for a whole blood test. Thirty pullets were tested four times at two-week intervals with the whole blood and tube methods. Twelve positive reactors were detected by the whole blood method. *S. pullorum* was isolated from 11 of the reactors, of which 9 were positive to the tube method. Six birds which gave cloudy reactions were considered doubtful. The authors did not state whether the two birds that did not react positively to the tube method and from which *S. pullorum* was isolated, were either doubtful or negative to the tube method. Hall and Bunyea (42) tested 206 hens with the whole blood and tube methods. An agreement of 91 per cent was observed. Three dilutions (1:25, 1:50, and 1:100) were employed in the tube method. Agglutination in the 1:25 dilution was regarded as suspicious while a reaction in the 1:50 or 1:100 was regarded as positive. The tube method detected 143 reactors of which 114 fowls (80 per cent) at necropsy yielded *S. pullorum* from the ovaries. The whole blood test detected 135 reactors of which 112 (83 per cent) at necropsy yielded *S. pullorum* from their ovaries. The two reactors detected by the tube method and from which *S. pullorum* was isolated, reacted partially to the tube test and slightly to the whole blood test. In the culturing of organs, only the ovary is mentioned. Cultures were incubated 24 hours. Welch (96) tested 5 flocks, ranging in size from 66 to 318 birds, with whole blood and tube methods. Both the wet and dry whole blood methods were used. The dry whole blood test appeared to be 90 per cent as efficient as the tube method. By a comparative study of wet and dry whole blood methods in 6 flocks, he found the latter to be 94 per cent as efficient. The author states,

"Conceding that there is a possible 10 per cent error in using the dry blood, yet this method is sufficiently accurate for certain conditions. It can be used by poultrymen who do not especially desire a B.W.D.-free flock, but who would like to minimize their losses from B.W.D. The decreased cost of the test appeals to the flock owner." Durant (29) tested 259 birds with whole blood, rapid serum, and tube methods. Antigen for the whole blood test was furnished by Dr. M. Dorset, United States Bureau of Animal Industry. The author concluded that the tube test was more efficient than the whole blood and rapid serum methods according to the testing results and necropsy findings in 111 reacting birds. In Finland, Stenius (87) tested 5 poultry flocks, ranging in size from 170 to 349 birds, with whole blood and rapid serum tests. He concluded that the rapid serum method was considerably more reliable than the whole blood method.

Since certain factors such as quality of the antigen, diagnostic dilution or dilutions, and the length of incubation period appear to influence the efficiency of agglutination tests, it must be recognized that as long as such factors vary in the different investigations, varied results may be anticipated. Unfortunately, in some of the investigations referred to, information concerning these factors was lacking. While the results thus far reported show that the whole blood method is not as efficient as the tube method, yet they offer encouragement for further investigation of the newer method.

In the endeavor to obtain further knowledge concerning the whole blood test, the following investigation was made. This investigation consisted of two parts: the first concerned birds at the laboratory, and the second concerned three commercial poultry flocks.

Procedure of the Experiment

Two groups maintained at the laboratory and consisting of 25 and 27 positive reacting birds, respectively, were tested with the whole blood and tube tests. In the majority of instances the birds were tested by both methods on the same day. The test fluid employed for the whole blood test was a stained, preserved antigen, furnished by Dr. M. Dorset, Bureau of Animal Industry, United States Department of Agriculture. The technique employed was as follows: a small amount of blood was taken from a wing vein incision and placed on a glass plate with a microscopic glass slide. A smear somewhat thicker than that used in microscopical study was made on the glass plate. One drop of test fluid was added to the blood film with a medicine dropper. The plate was tilted slightly upward and downward, which appeared to have a beneficial influence on the agglutination phenomenon. The reaction was recorded approximately two minutes after the antigen was added to the blood smear.

In the tube test, the sera were tested in dilutions of 1:10, 1:20, and higher, sufficient to determine the titer, 1 cc. of antigen being used for each dilution. The turbidity of the antigen was equal to tube No. 1 of the McFarland nephelometer. The period of incubation was 24 hours at 37° C. and an additional 18 to 24 hours at room temperature. The agglutination reactions were recorded as follows:

- 4—complete agglutination
- 3—incomplete agglutination
- 2—partial agglutination
- 1—slight agglutination
- 0—no agglutination

All birds whose sera gave a reaction of 4-3-2, 4-4-1, or higher in the dilutions of 1:10, 1:20, and 1:40 were considered positive. Sera which agglutinated *S.*

Whole Blood Test

P—Positive (rapid agglutination forming large clumps of bacteria).
 P?—Not strongly positive (slow agglutination forming medium to large clumps).
 D—Doubtful (agglutination forming small to medium clumps).
 N?—Slightly suspicious (slight and delayed agglutination).
 N—Negative (no agglutination).

Tube Test

P—Positive.
 D—Doubtful.
 N—Negative.

NT—No test.

U—Unsatisfactory.

* Bled on January 9.

pullorum antigen in a lesser degree were called doubtful, and no agglutination was regarded as negative.

The results of the tests for both methods for Group I are given in Table 23. As is shown in the table, all the birds with a few exceptions were tested 12 times with both methods over a period of approximately 2½ months. In five instances no tests were recorded for the whole blood test and in one instance, one serum was unsatisfactory for the tube test. Both methods showed complete agreement in all tests for 12 birds. Reactions such as either slightly suspicious or negative for the whole blood test and either doubtful or positive for the tube test or conversely so, were considered disagreements. The total number of tests made with both methods was 260, and 17.31 per cent did not agree. A total of 45 disagreements was recorded among the tests of 13 birds. Five birds were necropsied during the period the birds were tested. Culture material, in the majority of cases, was selected from pericardial fluid, liver, bile, spleen, peritoneum, ovary, oviduct, testicle, and suspicious lesions in birds necropsied throughout this investigation. The necropsy results for the 5 birds are presented in the following table:

<i>Bird No.</i>	<i>Date</i>	<i>Whole Blood Test</i>	<i>Tube Test</i>	<i>S. pullorum Isolated</i>
10185	1/14/31	N	D	—
10285	3/6/31	N T	N T	+
10342	2/13/31	P	P	+
10397	1/28/31	P ?	P	+
10418	1/9/31	N	P	+

The results of both tests for Group II are given in Table 24. All but 3 birds were tested 8 times. Both methods showed complete agreement in all tests for 24 birds. Among a total of 209 tests with both methods, there were 5 disagreements (2.39 per cent). Two birds were necropsied during this period of testing. The results of the necropsies are presented in the following table:

<i>Bird No.</i>	<i>Date</i>	<i>Whole Blood Test</i>	<i>Tube Test</i>	<i>S. pullorum Isolated</i>
27833	3/5/31	N	P	—
28139	3/1/31	N T	N T	—

Three commercial flocks which were diagnosed as infected in the routine testing for pullorum disease were selected for this investigation. Flock I revealed 11.89 per cent reactors, according to the tube agglutination test. The reactors were distributed throughout the entire flock. This flock had passed a negative test the previous season but through mismanagement, infection was introduced.

This flock, including all birds on the premises, was tested 3 times at approximately 4-week intervals with the whole blood and the tube tests. The whole blood test was conducted in the following manner: The equipment consisted of stained, preserved antigen, received from the same source as that used in the first part of this investigation; glass plate (15 x 11 inches); microscopic slides; dish for used slides; bleeding knife; tumbler containing cotton and 5 per cent phenol for bleeding knife; leg bands; leg band pliers; records; and improvised crates for holding tested birds. The personnel consisted of the tester and two assistants. The duties of each were as follows: One assistant caught the birds which were confined in one corner of the pen with wire netting; the other assistant reported the leg band number, held the bird for the tester, and placed it in a retaining crate. The tested birds were removed from the retaining crate by personnel

who collected blood samples for the tube test. These operations interfered in no way with those of the whole blood test. All positive or doubtful birds were placed in a bird crate and the negative birds were liberated into the pen. The tester made the incision in the wing vein, transferred the blood with a microscopic slide to the glass plate, making a smear slightly thicker than a smear for microscopical study, added the test fluid to the blood film, and recorded the leg band number and the interpretation of the agglutination reaction. The plate was tilted slightly upward and downward which appeared to have a beneficial influence on the agglutination phenomenon. The interpretation of the reaction was recorded approximately 2 minutes after the blood and test fluid were mixed. The 1:25 dilution and 1 cc. of antigen were employed in the tube method. The results were recorded after incubating the tests at 37° C. for 24 hours.

On December 1, the first test, 220 and 219 birds were tested with the whole blood and the tube tests, respectively. (One blood sample was broken and therefore could not be tested.) The whole blood test was conducted under quite unsuitable conditions. Dust and feathers frequently interfered with the blood-antigen mixture on the glass plate. Also weather conditions were not the most

NOTE—For legend refer to Table 23.

favorable. On December 12, the flock owner learned that 22 birds had escaped the test on December 1. These birds were immediately tested by both methods. All the birds on the premises were confined in three different houses, which necessitated moving the equipment three times. The time required to test all the birds was approximately $5\frac{1}{2}$ hours.

The results of the first test were as follows:

	Whole Blood	Tube
	Test	Test
Number of birds positive.....	23	27
Number of birds doubtful.....	25	0
Number of birds negative.....	194	214

Group	Classification	Number of Birds	Retest with W.B.T. only, on Dec. 4		
			N	D	P
I	Positive to both tests.....	17			
II	Negative to both tests.....	191*			
III	Positive to W.B.T. and negative to tube test.....	6	4	1	1
IV	Doubtful to the W.B.T. and negative to tube test..	17	17	0	0
V	Doubtful to the W.B.T. and positive to tube test....	8**	1	2	3
VI	Negative to the W.B.T. and positive to tube test....	2	1	0	1

* Does not include the bird that reacted negatively to W.B.T. and whose blood sample was broken.

** Two birds were not retested with the whole blood test.

Based on the whole blood retest, the two birds which were negative to the tube test and doubtful and positive respectively to the whole blood test, and the two birds which were negative to the whole blood test and positive to the tube test, were submitted to the laboratory for necropsy. The necropsy results of these four birds and of two birds included in the test of December 12 are as follows:

Group	Bird No.	Date of Necropsy	Testing Results at Necropsy							Necropsy Remarks		
			W.B.T.	Tube Test							<i>S. pullorum</i> Isolated	Source
				10	20	40	80	160	320	640		
III	11856	1/21	P?	2	1	0	0	0			—	
	39314	1/18	N	0	0	0	0	0			—	
V	11780	1/21	P?	4	4	3	3	1	0		—	
	11756*	1/22	P	4	4	4	2	2	0		+	Ovary
	11731*	1/22	P	4	4	4	2	2	1	0	—	
VI	11853	1/14	N	4	4	4	4	2	0		+	Cyst and ovary

* These two birds which reacted doubtfully to the W.B.T. and positively to the tube test on December 12, were not retested with the W.B.T.

On December 30, the second test, 224 birds were tested by both methods. The technique of the whole blood method, as employed on December 1, was modified. The test fluid was placed on the glass plate with a medicine dropper held in a vertical position. One drop was equal to 0.05 cc. The blood was added to the drop of test fluid with a wire loop (5 mm. in diameter). A loopful of blood

with a biconvex film amounted to 0.02 cc. The blood and antigen were thoroughly mixed with the loop, and spread over an area approximately one-half inch in diameter. The wire loop was rinsed in water and dried with gauze. The time for reading was the same as for the slide-smear method. The temperature of the glass plate was maintained at 22-35° C. This was accomplished through the use of an improvised hot water heater. Keeping the testing plate at a temperature above 22° C. appeared to produce more rapid and distinct reactions, especially with bloods of low titered birds. The weather conditions were quite favorable at the time of this test, even though the atmospheric temperature was 15° F. Considerable dust which was present in the air settled on the tests and the glass plate. The time consumed for the testing operations amounted to approximately 4½ hours. The results of the second test were as follows:

	Whole Blood Test	Tube Test
Number of birds positive.....	0	0
Number of birds doubtful.....	3	0
Number of birds negative.....	221	224*

* Includes one bird that escaped on the December 30 test, but tested negative on January 4.

Group	Classification	Number of Birds	Retest with W.B.T. only, on Jan. 4

	11848	2/11	N?	1	0	0	0	0	—

On January 25, the third test, 214 birds were tested by both methods. The technique of the whole blood test was the same as that employed on December 30. The temperature in the poultry house was approximately 45° F. The time consumed for the testing operations amounted to 4 hours. The results of the tests were as follows:

	Whole Blood Test	Tube Test
Number of birds positive.....	0	0
Number of birds doubtful.....	5	1
Number of birds negative.....	209	213

Flock II revealed 8.26 per cent reactors as determined by the agglutination test. This flock had not been tested previously. The reactors were distributed throughout the entire flock.

All the birds on the premises were tested 3 times at 4- to 6-week intervals. On January 7, 8, and 9, a total of 691 birds was tested by both methods. The testing operations and technique on the first two days were the same as employed in the second test of Flock I. On January 9, only one assistant was furnished which necessitated modifying the procedure in order to conserve time. The person conducting the whole blood test did not bleed birds, but instead obtained blood from the incision made by the person collecting samples for the tube test. The mean temperatures for the three days were 40.5°, 30.5°, and 32.5° F., respectively. The time required to test the entire flock with the whole blood test was 15 hours and 45 minutes. The results of the tests were as follows:

	Whole Blood Test	Tube Test
Number of birds positive.....	39	48
Number of birds doubtful.....	5	13
Number of birds negative.....	647	630

Group	Classification	Number of Birds
I	Positive to both methods.....	37
II	Negative to both methods.....	630
III	Doubtful to W.B.T. and positive to tube test	4
IV	Doubtful to W.B.T. and doubtful to tube test	1
V	Negative to W.B.T. and positive to tube test	7
VI	Positive to W.B.T. and doubtful to tube test	2
VII	Negative to W.B.T. and doubtful to tube test	10

The two tests did not agree on 24 birds. These birds, included in Groups III to VII, inclusive, were retested on January 14. The results are given in Table 25.

The birds were classified into three groups, according to the results of the retest. Four birds reacted positively with both methods. These birds were disposed of with the remainder of the positive reactors. Among the remainder of

* Birds in the retained group were tested on February 4 and 24 instead of January 22 and 27. Note:—For legend refer to Table 23.

the 24 birds, 10 were retained in isolation on the premises and 9 were submitted to the laboratory for necropsy. Two birds were not necropsied: one was destroyed by the flock owner and the other later reacted strongly positive to both methods. The latter group was retested three times, including the test at the time of necropsy. The results are given in Table 25.

The birds in the retained group were retested on February 4 and 24. Following the test of February 24, this group was submitted to the laboratory for necropsy. The testing results and the findings at necropsy are shown in Table 25.

On February 4 and 5, Flock II was retested by both tests. The technique of the whole blood test for February 4 was the same as that employed on January 7. On February 5, the technique of the whole blood test was slightly modified. The blood collector who collected the samples for the tube test held the bird for the tester of the whole blood test. After the tester had procured a loopful of blood, the blood collector obtained a sample from the same incision. The latter also placed the bird in the retaining crates. Two helpers, one catching the birds and the other removing the tested birds from the retaining crates, assisted in the testing. This change was made because the blood collector was more familiar with the proper manner of holding the birds for bleeding. The atmospheric temperature was approximately a few degrees above freezing. The total number of birds tested with both methods was 610. The total time consumed for the testing operations amounted to 12 hours and 10 minutes. The results of the second test were as follows:

	<i>Whole Blood</i> Test	<i>Tube</i> Test
Number of birds positive*.....	1	1
Number of birds negative.....	599	599

* This table does not include the 10 reacting birds which were retained on the premises after the first test. The testing results of these birds are reported in Table 25. The bird which was positive to the whole blood test was also positive to the tube test.

On March 23, Flock II was tested for the third time. The technique for the whole blood test was similar to that of February 5, except that one assistant recorded the leg band numbers and results or the tester conducting the whole blood test. The atmospheric temperature was slightly below freezing. A total of 422 birds was tested in 6½ hours. The results of the tests were as follows:

	<i>Whole Blood</i> Test	<i>Tube</i> Test
Number of birds positive.....	0	0
Number of birds doubtful.....	3	2
Number of birds negative.....	419	420

These five doubtful reacting birds were submitted to the laboratory for necropsy and the results were as follows:

Group	Bird No.	Date	Results of Necropsy		
			W.B.T.	Tube Test	<i>S. pullorum</i> Isolated
Doubtful to W.B.T.	75182	3/30	N?	N	—
	80271	3/30	N?	N	—
	80543	3/30	N?	N	—
Doubtful to tube test	80124	3/30	D	D	—
	80549	3/30	N	N	—

Flock III had not been tested previously and revealed 6.15 per cent reactors as determined by the agglutination test. The reactors were distributed throughout the entire flock.

On February 8 the entire flock was tested by both methods. A total of 276 birds was tested in approximately 6 hours. The birds were confined in a number of small pens which necessitated frequent moving of the testing equipment. The atmospheric temperature was a few degrees below freezing. The technique of the whole blood test was identical to that employed on February 5 in Flock II. The results of the tests were as follows:

	Whole Blood Test	Tube Test
Number of birds positive.....	14	14
Number of birds doubtful.....	4	4
Number of birds negative.....	258	258

Group	Classification	Number of Birds	Retested with W.B.T. only, Feb. 15		
			N	D	P
I	Positive to both tests.....	14			
II	Negative to both tests.....	256			
III	Negative to W.B.T. and doubtful to tube test.....	2	1*	0	0
IV	Doubtful to W.B.T. and negative to tube test.....	2	2	0	0
V	Doubtful to both tests.....	2	1**	0	0

* One bird was killed by owner.

** One bird died.

The surviving reactors in Groups III and V were submitted to the laboratory for necropsy. Birds in Group IV were retained in the flock. The results of the necropsies were as follows:

Group	Bird No.	Sex	Date	W.B.T.	Findings at Necropsy					
					Tube Test					<i>S. pullorum</i> Isolated
					10	20	40	80	160	
III	71596	Male	2/17	N	3	2	1	0	0	+
V	71587	Male	2/18	N	4	3	2	0	0	+

On March 11, Flock III was tested for the second time by both methods. A total of 227 birds was tested in approximately 4 hours. The technique for the whole blood test was identical with that employed on February 8. No reactors were detected by either method.

Discussion

Among 260 tests for Group I, made with both methods, there was a disagreement of 17.31 per cent. The disagreements between the results of the two methods were observed throughout the testing period, most of them occurring when the serum titer of the bird was low. However, in some birds with high serum titers, the two tests did not always agree. Among the birds necropsied *S. pullorum* was isolated from 1 that reacted negatively to the whole blood test and positively to the tube test. This bird was at no time regarded as positive to the whole blood test. However, the titer at necropsy was less than 80. The disagreements between the tests of the two methods were not as numerous in

Group II as in Group I. Only 2.93 per cent of the total tests (209) disagreed, and these were confined to 3 birds with low titered sera.

It is probable that the percentage of disagreement between the results of the two methods could be reduced if the technique of the whole blood test were more refined. According to these limited observations, it appears that the dilution factor cannot be disregarded, since the thickness of the blood smear cannot be kept uniform, and the amount of antigen coming in contact with blood cannot be kept constant. These factors suggest an inconstant dilution which might be partly responsible for these variations. Also, temperatures near or below freezing in the poultry house at times appeared to have an unfavorable influence on the agglutination reaction.

The total number of tests made with both methods in the three flocks was 2,095. Ten tests included in this total were not classified. Of the remainder, 69 were positive, and 2,749 were negative by both methods; 17 were either doubtful to both methods or doubtful to one method and positive to the other; and 60 were negative to one method and either doubtful or positive to the other.

Of the birds represented in the latter two groups, 36 were necropsied. The following data show the number of necropsied birds classified as to their reactions to both methods at time of necropsy and the isolation of *S. pullorum*.

	<i>S. pullorum</i> Isolated	<i>S. pullorum</i> not Isolated
Positive to both tests.....	7	3
Negative to both tests.....	3	15
Doubtful to both tests.....	0	1
Negative to W.B.T. and doubtful to tube test.....	3	1
Negative to W.B.T. and positive to tube test.....	2	0
Positive to W.B.T. and negative to tube test.....	0	1
	15	21

S. pullorum was isolated from 15 of the 36 birds necropsied. Of this number, 3 were negative to both methods at the time of necropsy and 5 were negative to the whole blood method and either doubtful or positive to the tube method. The following birds, from which *S. pullorum* was isolated, did not react at any time to the whole blood test: 11853, 24854, 71596, 80278, 80328, and 80439. All but one of these birds possessed low titers.

S. pullorum was not isolated from 21 birds. Of this number, 9 at no time reacted to the tube method but did react to the whole blood method; 8 birds reacted to the tube method, but at no time reacted to the whole blood method.

While both testing methods failed to detect all infected birds, it appears that the whole blood test is less efficient than the tube test, as conducted in these investigations. The fact that the majority of disagreements between the two methods occurred with birds possessing low titers, suggests that a test is required in which the dilution can be fixed and maintained at a level which will detect such birds. The fact must be recognized that birds with low and fluctuating titers exist, and that when such birds are not detected in a testing program, failure in eradication may be anticipated.

Since the agglutination phenomenon is in reality the same for both methods, it appears that such a test as the whole blood test should not be expected to give reliable results when all steps in the technique do not remain constant. Investigations and comparative tests have shown that the degree of efficiency of the tube agglutination method was raised when the different phases in the technique were standardized and made uniform. It is possible that the degree of efficiency of the whole blood method might likewise be raised.

Furthermore, the interpretation of the reactions is no less difficult than in the tube method. As has been shown in these data, various types of reactions may occur so that a knowledge of the field of serology and other related fields is required. Therefore, a test of this nature should not be advocated as a simplified test which can be employed by persons who are not qualified to conduct such a test. Such action can lead only to retardation in eradication of the disease.

In recognizing the desirable features of the whole blood test, one must not lose sight of the fact that the real value of this method cannot be ascertained until it has been employed in an eradication program. If this method is found to be equally or more efficient than the tube method in detecting infected birds, then its adoption should be considered. At the present time, however, it appears that the whole blood method should not be considered as reliable as the tube method but that investigations concerning the former should be encouraged.

Conclusions

1. Comparative tests employing the whole blood and tube agglutination methods revealed a greater efficiency in favor of the latter method.
2. *S. pullorum* was isolated from birds that had not reacted at any time to the whole blood test. In all but one of these cases, the birds possessed low titers.
3. Failure to detect infected birds with the whole blood method occurred most frequently with birds possessing low titers.
4. *S. pullorum* was isolated from three birds that were negative to both methods at the time of necropsy.
5. While the whole blood method has a diagnostic value, it does not appear as sensitive in detecting infected birds as the tube method.

INTENSIVE TESTING VERSUS ANNUAL TESTING IN PULLORUM DISEASE ERADICATION

In eradicating pullorum disease from a flock of poultry, it is very important to select a testing program which will eliminate all infected birds in the shortest possible time. While very little literature is available comparing intensive and annual testing, investigators are generally agreed that a method of procedure involving some form of intensive testing is necessary to detect all infected birds in order to expedite eradication of the disease.

Newsom, Cross, and Ufford (67) by repeated tests on the same birds found that not all reacting hens are consistent reactors. Because of the inconsistency, they suggested the application of the tube agglutination test at frequent intervals, in order to detect all of the carrier birds. Kernkamp (54) also found that some reacting birds were of the intermittent type as shown by repeated tests. Because of this type of reactors, he regarded repeated testing as necessary to detect all reacting birds. Edwards and Hull (32), in 984 tests on 93 positive reacting birds tested over a period of one year, noted only 6 negative tests which were confined to 4 hens. They concluded that this type of reactor is not as common as reported by some investigators. Reports from the Massachusetts Agricultural Experiment Station (48, 92) advise retesting of infected flocks within the same season until negative. Dearstyne (24) reported a considerable percentage of intermittent reactors. Of 327 flocks in a program of intensive testing, 26 showed infection at the end of the sixth test, when the testing was discontinued. Dearstyne, Greaves, and Gauger (25) found a percentage of 26.8 intermittent reactors among 5,053 reactors under field conditions. Because it was impossible to detect all infected birds on one test, they advised the short interval testing plan. Bottorff (9) reporting the results of testing on six farms, found that from two to eight

monthly tests were necessary to obtain a negative test. He regarded retesting of a flock as advisable only when considerable breeding and trapnesting was being practiced.

Source of Data

The data presented in this report were collected from the routine testing records of flocks in which intensive and annual testing procedures have been followed. Introduction of new stock, incomplete information as to number of birds tested as compared to the flock total, changing of testing procedure from year to year, and intermittent testing were factors which limited the selected number of flocks. The data apply to flocks whose testing histories were accurately known over a period of 2 consecutive years. The flocks selected were divided into five groups, with the basis for grouping as follows:

Group A—Intensive testing. Flock 100 per cent, i.e., all birds on premises, tested on each test, retested at intervals of 4 to 6 weeks, until negative.

Group B—Intensive testing. Flocks 100 per cent tested on each test, retested at intervals of 4 to 6 weeks, but not retested until negative.

Group C—Intensive testing, pen method. Flock 100 per cent tested on first test and infected pens retested at intervals of 4 to 6 weeks until negative.

Group D—Intensive testing, partial flock testing. Flock not 100 per cent tested, part of flock retested at intervals of 4 to 6 weeks, but not retested until negative.

Group E—Annual testing. Flock 100 per cent tested annually.

Table 26 shows the data concerning the different groups over a period of 2 years.

TABLE 26—SUMMARY OF COMPARATIVE DATA ON INTENSIVE AND ANNUAL TESTING FOR A PERIOD OF TWO YEARS

Year	Group	Flocks	Range in Flock Size	Total Birds Tested on Initial Test	Average Infection on Initial Test	Range in Infection on Initial Test	Negative Flocks

	E	15	185- 2,963	12,321	3.37	0.00-42.97	4

Discussion

In comparing the average percentages of infection of the first year with those of the second year, it is evident that Groups A, B, and C, representing flocks in which an intensive testing procedure was followed, were more successful in eradicating the disease than Group E, in which the annual testing procedure was followed. While these intensive testing procedures were the most efficient, the results obtained were in direct ratio to the thoroughness and completeness of the procedure followed. Of the four groups that followed the intensive testing procedure, groups A, B, and C, which tested 100 per cent of the birds, were more successful in eradicating the disease than Group D, which practiced partial flock testing. Annual testing and partial flock testing of infected flocks, as shown, are of little value in the eradication of the disease. In Group A, first year, 8 flocks were negative on the second test, 5 on the third test, 4 on the fourth test, and 1 on the sixth test. In Groups B and D, first year, the maximum number

of tests received by any one flock was 4 and the minimum number of tests was 2. In Group C, first year, all flocks were negative on the second test. Of the 7,130 birds originally tested, 832 were retested. Although the pen method of testing appeared satisfactory for the 3 flocks reported here, it is not to be considered as efficient as the retesting of all birds on the premises.

While the eradication of pullorum disease is primarily dependent on the detection of all infected birds and their prompt removal from the breeding flock, full cooperation of the owner in carrying out eradication measures is necessary to prevent re-infection.

Conclusions

From the data presented, it can be concluded that:

1. Intensive testing is more efficient than annual testing in the eradication of pullorum disease from a flock.
2. Testing of all the birds on the premises is more efficient than partial flock testing.
3. The most efficient testing procedure for the eradication of pullorum disease from a flock is (a) to test all birds in the flock on each test; (b) to retest at 4- to 6-week intervals until the flock has received at least one or more negative tests.

TESTING RESULTS FOR THE 1931-32 SEASON

The testing data for the 1931-32 season show that the volume of work for this past year has been greater than in any previous testing season. A total of 483 applications for testing was received. Twenty-one flock owners cancelled their applications before the close of the season, and 462 submitted to the laboratory 421,895 blood samples, which were tested. Upon the laboratory's request, 61 owners submitted reacting birds for necropsy. Such necropsies are considered helpful in confirming the results of the agglutination test, especially in flocks previously negative which reveal one or two reactors, and in flocks which reveal only doubtful reactors. A few poultrymen, however, failed to comply; consequently it was impossible for the laboratory to report a satisfactory diagnosis as to the status of their flocks in regard to pullorum disease. Flock owners who fail to submit reacting birds requested for necropsy are given a positive testing report. In such cases the flock standing can be changed only by retesting the birds. Hence owners are advised to send the birds to the laboratory immediately upon receipt of the request, in order that the true pullorum-disease status of the flock may be determined. The amount of service rendered during the past year is shown in the following summary:

Summary of Service Rendered

Applications received	483
Applications cancelled	21
Flocks tested.....	462*
Tests made.....	421,895
Chickens:	
Routine.....	402,677
Experimental.....	18,184
Fowl other than chickens:	
Routine.....	384
Experimental.....	650
Owners receiving necropsy service.....	61
Necropsies of reacting birds.....	117**

* Includes seven flocks of poultry other than chickens.

** Credit is due to Dr. Glen L. Dunlap, who assisted with the necropsies of the reacting birds submitted to the laboratory.

Distribution of Tests and Reactors

In Table 27 is given the distribution of tests and positive tests by breeds in each county. Birds were tested in 12 counties. Plymouth, Middlesex, and Norfolk Counties had the largest number of tests. Barnstable and Suffolk Counties had no positive tests, while 6 additional counties had less than 1 per cent positive tests.

Six breeds and others grouped as miscellaneous were tested. The Rhode Island Red is the predominating breed among those tested. Less than 1 per cent positive tests were found among the Rhode Island Red, White Leghorn, and White Wyandotte breeds.

The total number of tests among chickens was 420,861, of which 0.90 per cent were positive. The percentage of positive tests is the lowest attained in the testing history of this State.

Tested Aves Other Than Chickens

During the past year, as shown in Table 28, 1,034 birds other than chickens were tested for 25 flock owners, 19 of whom also tested their chickens. In 5 of the chicken flocks, infection was detected. No reactors were found among the turkeys, pheasants, ducks, geese, guinea fowl, pigeons, and jungle fowl. Persons engaged in raising aves other than chickens are encouraged to have such birds tested in order to determine their importance in an eradication program.

TABLE 28—TESTED AVES OTHER THAN CHICKENS

Fowls	Females		Males		Total Tested
	Tested	Reactors	Tested	Reactors	
Turkeys	556	0	117	0	673
Pheasants	97	0	25	0	122
Ducks	69	0	13	0	82
Geese	64	0	14	0	78
Guinea fowl	35	0	11	0	46
Pigeons	30	0	—	—	30
Jungle fowl	—	—	3	0	3
Totals	851	0	183	0	1,034

Number of Non-Reacting Flocks Increasing

Table 29 shows that the number of non-reacting flocks was 355 during the past season. Of this number, 180 were 100 per cent tested, representing 157,516 birds, and 175 were partially tested, representing 141,018 birds. In comparison with the previous season, the number of 100 per cent tested flocks has decreased and the number of partially tested flocks has increased in the non-reacting group. Every effort should be made to change this trend because the true disease status of a flock cannot be determined by testing only part of the flock. In order to determine that the flock is free from pullorum disease, it is necessary to test every bird on the premises annually. In the routine testing of flocks, infection is occasionally detected in flocks which were non-reacting previously. This may be expected to occur from time to time as long as the present conditions in poultry traffic and in the eradication of the disease are tolerated.

Plymouth and Middlesex Counties had the largest number of non-reacting flocks. All the flocks tested in Barnstable and Suffolk Counties were non-reacting. A total of 100 positive flocks was tested, of which 42 were 100 per cent tested and 58 were partially tested.

The data in Table 29 show that pullorum disease-free stock can be procured in each of the 12 counties. In order to expedite eradication of the disease, poultrymen should be advised to purchase from pullorum disease-free sources. In the majority of cases the local sources should prove to be the most advantageous from which to purchase stock.

TABLE 29—NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

County	100% Tested		Partially Tested		Total

Annual Testing Necessary to Determine Flock Status

Annual testing of a flock is necessary in order to determine the exact disease status because the fact that a flock is once free of the disease does not assure the owner that infection will not be re-introduced. The testing of a flock is a means of disease detection and not a means of prevention. The testing is only a part of a disease eradication program. In Table 30 are given the results from flocks tested for the first time, those tested intermittently, and those tested annually. In the latter group, 269 flocks were tested three or more consecutive years. The percentage of positive tests was 0.46 for these 269 flocks. This is less than the percentages of positive tests observed in the other three groups. It is clearly evident, as determined from the results which are presented here, that annual testing should no longer be regarded as a questionable measure in a sound eradication program. It is also recognized that when a testing program is adopted to eradicate the disease from a flock, intensive testing is more effective than annual testing, as is reported elsewhere in this publication.

TABLE 30—ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Per cent	100% Tested	Partially Tested	100% Tested	Partially Tested

Tested for three or more consecutive years.....	269	298,945	334,699	1,537	0.46	109	117	17	26
Totals.....	455	377,191	420,861	3,779	0.90	180	175	42	58

Progress in Eradication

In Table 31 are given the comparative results of the past two seasons of testing. Increases are observed in the number of tested flocks, birds, and tests. Nine counties show a reduction in the percentage of positive tests. Six counties show an increase and seven a decrease in the number of tested flocks. The

TABLE 31—COMPARISON OF 1930-31 AND 1931-32 TESTING

Totals.....	455	377,191	420,861	0.90	355

number of non-reacting flocks increased in seven counties, decreased in three, and remained the same in one. It is encouraging to note that the percentage of positive tests has decreased to less than 1 per cent and also that the number of non-reacting flocks is increasing.

SUGGESTIONS FOR THE ESTABLISHMENT AND MAINTENANCE OF PULLORUM DISEASE-FREE FLOCKS

The efficiency and effectiveness of an eradication program are directly proportional to the soundness of the eradication measures adopted and the manner in which they are carried out. While it is true that programs should be designed to satisfy local conditions, yet the fundamental disease eradication principles must be identical for all localities. Although progress has been made in certain states, there is still an urgent need for improvement and standardization of some phases in the eradication of this disease, in order to promote a sound program. Those concerned with eradication will agree that only the most reliable diagnostic test or tests should be employed. These should be adopted as the standard and the official test or tests. Furthermore, only persons trained in the proper field of work and competent to employ and to interpret such diagnostic tests should be permitted to assume responsibility in an eradication program. In some states elaborate programs are designed, but in actual practice, important phases are sadly neglected. Control officials should be reluctant to accept testing results from other states until a thorough investigation has been made, not only of the printed program, but especially of the manner in which the program is operated.

In the majority of states, tested flocks are classified as to their disease status. Although some controversy still exists, the majority of disease control officials agree as to what shall constitute a pullorum disease-free flock, as determined by the agglutination test. The most general regulation in establishing a disease-free flock, is that the entire flock must pass two consecutive negative tests not less than six months nor more than a year apart. Experience has shown that flocks which have satisfied this requirement seldom, if at all, retain the infection. In classifying flocks as to their disease status, there are in reality only two classes of flocks, namely, infected and non-infected. The latter is accepted as the safer for breeding purposes. The infected group is further sub-divided in some localities which maintain a distinction between untested flocks and tested infected flocks. Some states even go so far as to classify flocks on the amount of infection detected. It does not appear expedient to recognize and tolerate certain limits of infection because as long as the disease exists in the flock, any degree of trouble may be expected in the progeny of such a flock. An effort should be made to encourage poultrymen in every way possible to establish pullorum disease-free flocks. Hence a term for pullorum disease-free flocks is highly desirable in order that poultrymen may identify such flocks with the least amount of trouble and uncertainty. The term "(Name of State) Accredited—Pullorum Disease-Free" should be adopted to designate flocks free of this disease. Furthermore, the term used to designate a pullorum disease-free flock should stand by itself and not be masked by terms that designate breeding or laying qualities of a flock. The average poultryman today is confronted with a glossary of terms which is confusing and misleading to him. Present circumstances suggest a revision and standardization of such terms.

An effort should also be made to prohibit misleading or false advertising concerning flocks. Official lists of pullorum disease-free flocks should be made available to the public. Such lists will enable poultrymen to locate stock free of this disease, as well as stimulate eradication efforts.

September, 1932

Inspection of Commercial
Feedstuffs

By Philip H. Smith

This is the thirty-eighth report of the work of feeding stuffs inspection and presents the results of the chemical and microscopic analyses on 1607 samples of feeding stuffs intended for live stock and poultry consumption, collected during the year ending September 1, 1932.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

During the past year, 1,023 brands of feed have been registered for sale by 230 manufacturers and dealers; 1,607 samples of feeding stuffs have been collected and subjected to analysis; 135 dealers located in 79 towns and cities have been visited by the feed inspector at least once.

The intent of the Feeding Stuffs Act is primarily to prevent deception and misrepresentation in the sale of commercial feeding stuffs. *It does not, however, prohibit the sale of inferior feeds* unless the feed is actually injurious to live stock and poultry. A "true label" giving the information required by statute enables the feeder to purchase wisely of those products best adapted to his own needs.

¹The following staff members assisted in the inspection: Albert F. Spelman, George Larsinos and John W. Kuzmeski, Chemists; Frederick A. McLaughlin, Microscopist, James T. Howard, Inspector, Cora B. Grover, Clerk.

Deficiencies

Of the 1,607 feedstuffs collected and examined, only 35 differed appreciably from their guarantees in protein, fat or fiber content. A tabulation of feeds not conforming to guarantee follows.

Feeds Not Conforming to Guarantees.

(Shortages of less than one per cent in protein or fat or an excess of less than one per cent fiber are not listed.)

Certified Ingredients

The feeds listed simply include dairy rations and poultry feeds found on sale and sampled by the inspector. Feeds registered but not sampled are not included.

Allied Mills, Inc.

Amco 24% Dairy Ration

Corn gluten feed, corn gluten meal, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, ground oats, dried malt grains, soybean oil meal, ground barley, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Amco 20% Dairy Ration

Corn gluten feed, corn gluten meal, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, ground oats, dried malt grains, soybean oil meal, ground barley, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Amco 20% National Dairy Ration

Corn gluten feed, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, ground oats, corn distillers' dried grains, peanut oil meal, ground barley, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Amco 16½% Sucrene Dairy Ration

Soybean oil meal, corn gluten feed, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, dried malt grains, ground and bolted screenings from flax, wheat, corn, oats and barley, cane molasses, 1% ground limestone and 1% salt.

Red Feather Egg Mash

Meat scraps, wheat standard middlings, corn meal, soybean oil meal, fine ground alfalfa meal, fine ground oats, wheat standard bran, corn gluten feed, 2% ground limestone, 1% steamed bone meal, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat standard bran, corn meal, fine ground oat meal, corn gluten feed, old process linseed oil meal, choice alfalfa meal, soybean oil meal, 2% ground limestone, 1% steamed bone meal, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Egg Mash with Cod Liver Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat standard bran, corn meal, fine ground oat meal, corn gluten feed, old process linseed oil meal, choice alfalfa meal, soybean oil meal, 2% ground limestone, 1% steamed bone meal, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and cod liver oil.

Wayne All Mash Grower

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soybean oil meal, wheat standard bran, 2% ground limestone, 1% steamed bone meal, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne 20% Supreme Dairy Feed

Soybean oil meal, cottonseed oil meal, wheat standard bran, ground and bolted screenings from flax, wheat, corn, oats and barley, cane molasses, 0.5% steamed bone meal, 1% ground limestone, 1% salt, 0.06% iron oxide and 0.007% potassium iodide.

A. P. Ames Co.

Ames Complete Starting Ration

Cod liver oil, dried milk, ground oat groats, corn meal, wheat bran, wheat middlings, meat scraps, fish meal, alfalfa meal, calcium carbonate and salt.

20% Balanced Ration

White hominy, corn meal, wheat bran, wheat middlings, ground oats, gluten feed, gluten meal, linseed meal, cotton seed meal, calcium carbonate, salt, bone meal, oat meal by-products and molasses.

Egg Mash

Corn meal, wheat bran, wheat middlings, pulverized oats, meat scraps, fish scraps, bone meal, calcium carbonate, alfalfa.

Growing Mash

Oat meal, corn meal, wheat bran, middlings, meat scraps, fish meal, alfalfa meal, calcium carbonate, salt.

24% Milk Maker

Corn meal or hominy, wheat bran, wheat middlings, ground oats, gluten feed, gluten meal, linseed meal, cotton seed meal, calcium carbonate, salt, bone meal, oat meal by-products and molasses.

Arcady Farms Milling Co.

Arcady Besbet Growing Mash

Fish meal, meat scraps, dried buttermilk, oat meal, o. p. linseed oil meal, corn gluten feed, corn feed meal, wheat bran, wheat middlings, alfalfa meal, cod liver oil, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady Besbet Laying Mash

Fish meal, meat scraps, corn gluten meal, dried buttermilk, oat meal, corn feed meal, corn gluten feed, alfalfa meal, fine ground oats, wheat bran, wheat middlings, cod liver oil, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Old Colony Feed

Cottonseed meal, soybean meal, hominy feed, corn gluten feed, o. p. linseed oil meal, dried beet pulp, wheat bran, wheat middlings, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Associated Farmers' Exchanges, Inc.

More-Value 20% Dairy Ration

Corn gluten feed, standard wheat bran, hominy, soy bean meal, linseed oil meal, 41% cottonseed meal, brewers dried grains, molasses, steamed bone meal, calcium carbonate, salt.

Profit-Maker 24% Dairy Ration

Cottonseed meal 36%, corn gluten feed, st. wheat bran, old process linseed oil meal, soy bean oil meal, pure ground barley, No. 2 38-lb. pure ground oats, yellow hominy, corn distillers dried grains, molasses, steamed bone meal, calcium carbonate, salt.

Profit-Maker 20% Dairy Ration

Corn distillers dried grains, soy bean oil meal, pure ground barley, yellow hominy, old process linseed oil meal, cottonseed meal, corn gluten feed, No. 2 38-lb. pure ground oats, standard wheat bran, molasses, steamed bone meal, calcium carbonate, salt.

Profit-Maker Starting and Growing Mash

Corn meal, wheat bran, ground oat groats, wheat flour middlings, dry skim milk, alfalfa leaf meal, steamed bone meal, fish meal, meat scraps, salt.

Beacon Milling Co., Inc.

Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soy bean oil meal, ground oats, corn meal, ground grain screenings, cottonseed meal, wheat bran, ground barley, brewers' dried grains, molasses, 1% salt, 1% calcium carbonate, 1% calcium phosphate.

Beacon "20"

Old process linseed oil meal, cottonseed meal, soy bean oil meal, corn gluten feed, corn gluten meal, corn meal, wheat bran (may contain mill run screenings), corn distiller's dried grains, ground oats, ground barley, 1% salt, 1% calcium phosphate, 1% calcium carbonate.

Beacon Breeders Mash with Buttermilk

Dried skimmilk, dried buttermilk, fish meal, meat scrap, alfalfa leaf meal, corn meal, pulverized heavy oats, pulverized barley, corn gluten meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), soy bean oil meal, old process linseed oil meal, cod liver oil, $\frac{1}{2}$ % fine salt, 3% calcium carbonate, 2% calcium phosphate, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon's Cayuga Growing Mash

Dried skimmilk, fish meal, meat scrap, old process linseed oil meal, pulverized heavy oats, corn meal, pulverized barley, wheat bran, wheat middlings, alfalfa leaf meal, 2% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt.

Beacon's Cayuga Laying Mash with Buttermilk

Dried skimmilk, dried buttermilk, fish meal, meat scrap, corn meal, alfalfa leaf meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), soy bean oil meal, pulverized barley, corn gluten meal, pulverized heavy oats, 3% calcium carbonate, 2% calcium phosphate, $\frac{1}{2}$ % salt.

Beacon Complete Starting Ration

Dried skimmilk, meat scrap, fish meal, ground corn, ground hulled oats, pulverized heavy clipped oats, pulverized heavy barley, wheat bran (may contain mill run screenings), old process linseed oil meal, wheat red dog flour, alfalfa leaf meal, cod liver oil, 2% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, alfalfa meal, wheat bran, wheat middlings, 1% calcium carbonate, 1% calcium phosphate, 1% salt.

Beacon Duck Starter

Dried skim milk, fish meal, meat scrap, wheat bran (may contain mill run screenings), wheat low grade flour, corn meal, special ground oat groats, alfalfa leaf meal, cod liver oil, 1% calcium carbonate, $\frac{1}{4}$ % calcium phosphate, $\frac{1}{4}$ % salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Egg Mash with Buttermilk

Dried buttermilk, dried skim milk, meat scrap, fish meal, corn gluten meal, soy bean oil meal, old process linseed oil meal, pulverized barley, pulverized heavy oats, corn meal, alfalfa leaf meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), 3% calcium carbonate, 2% calcium phosphate, $\frac{1}{2}$ % fine salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Growing Mash

Dried skim milk, meat scrap, fish meal, old process linseed oil meal, pulverized heavy oats, pulverized barley, corn meal, wheat red dog, alfalfa leaf meal, wheat bran wheat middlings, 3% calcium carbonate, 2% calcium phosphate, $\frac{1}{2}$ % salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Special Coccidiosis Mash

Dried skim milk, ground yellow corn, pulverized barley, wheat bran, cod liver oil, $\frac{1}{2}$ % calcium phosphate, $\frac{2}{3}$ % calcium carbonate.

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewers' dried grains, corn distiller's dried grains, wheat bran (may contain mill run screenings), ground oats, ground barley, molasses, 1% salt, 1% calcium carbonate.

Beacon Sweet "20"

Old process linseed oil meal, soy bean oil meal, corn distiller's dried grains, cottonseed meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), corn gluten meal, corn gluten feed, ground barley, corn meal, ground oats, molasses, 1% calcium carbonate, 1% salt.

Beacon Turkey Growing Feed

Dried skim milk, alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, meat scraps, fish meal, wheat bran, wheat middlings, wheat red dog flour, pulverized heavy oats, pulverized barley, corn meal, 4% calcium carbonate, 2% calcium phosphate, $\frac{1}{2}$ % salt, $\frac{1}{2}$ % Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Chariot Starter & Grower

Dried skim milk, fish meal, meat scrap, old process linseed oil meal, pulverized heavy oats, corn meal, pulverized barley, wheat bran, wheat middlings, alfalfa leaf meal, cod liver oil, 2% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt.

Berkshire Coal & Grain Co., Inc.**Berkshire Hills Sweet Dairy Feed**

Molasses, wheat bran, ground barley, ground oats, gluten feed, linseed meal, cottonseed meal, wheat middlings, corn meal, calcium carbonate, bone meal, salt.

Green Mountain Dairy Ration

Cottonseed meal, wheat bran, ground oats, ground barley, gluten feed, hominy and oil meal, salt, and calcium carbonate.

Green Mountain Laying Mash

Corn meal, ground oats, wheat middlings, gluten feed, linseed meal, rolled oats & fine ground alfalfa, wheat bran, fine ground meat & fish scraps, charcoal, calcium carbonate & fine salt.

Black Rock Milling Corp.**Bidwell 24% Dairy Ration**

Wheat bran, linseed oil meal, ground barley, cottonseed meal, corn gluten feed, fine ground grain screenings, malt sprouts, corn gluten meal, molasses, calcium carbonate and salt.

Bidwell 20% Dairy Ration

Wheat bran, linseed oil meal, malt sprouts, gluten feed, gluten meal, ground barley, cottonseed meal, fine ground grain screenings, molasses, calcium carbonate and salt.

Bidwell Dry-Mash

Dried buttermilk, alfalfa meal, corn meal, standard wheat bran and wheat middlings (may contain mill run of screenings), fish meal, meat, bone, linseed oil meal, gluten meal, soy bean meal, calcium carbonate, salt, and ground: wheat, barley, kaffir corn and buckwheat.

Borden Grain Co.**Borden's Chick Starting Feed**

Wheat bran, wheat middlings, corn meal, ground oat meal, alfalfa leaf meal, meat scrap, fish meal, dried milk, calcium carbonate, salt, bone meal.

Borden's Dairy Feed

Wheat bran, wheat middlings, corn meal or hominy, gluten meal, cotton seed meal, gluten feed, linseed oil meal, calcium carbonate, bone meal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oatmeal, dried milk, alfalfa leaf meal, fish meal, meat scrap, calcium carbonate, salt, may contain cod liver oil.

Geo. B. Brown

Brown's Dairy Feed

Wheat bran, hominy feed, oat feed, cotton seed meal, calcium carbonate, o. p. linseed meal, corn gluten feed, molasses, bone meal.

Brown's Laying Mash

Corn meal, wheat midds, wheat bran, pulv. oats, bone meal, corn gluten feed, meat scraps, dried milk, $\frac{1}{2}\%$ salt, calcium carbonate.

Butman Grain & Feed Co.

Climax Growing Feed

Ground corn and oats, wheat middlings, beef scraps, dried milk, bone meal, calcium carbonate, charcoal and salt.

Climax Laying Mash

Corn meal, bran, middlings, ground wheat, ground oats, beef and fish scraps, alfalfa meal, calcium carbonate and buttermilk, salt.

Chapin & Co.

Chapin Kernels Lay-All

Dried buttermilk, fish meal, meat scraps, corn gluten meal, alfalfa leaf meal, corn oil meal, wheat flour, pulverized oats, yellow corn meal, wheat bran, milo, wheat middlings, yellow hominy feed, ground barley, molasses, salt, charcoal, bone meal, not over 2% calcium carbonate, cod liver oil.

Coles Co.

Fortune Egg Mash

Ground corn, wheat, oats, barley, kaffir corn, buckwheat, alfalfa, wheat bran, wheat flour midds, old process linseed meal, corn gluten feed, corn germ meal, hominy, dried buttermilk, fish meal, bone and meat meal, calcium carbonate, 1% salt. (Wheat bran & wheat middlings may contain screenings not to exceed mill run.)

Community Feed Stores, Inc.

Community 20% Dairy Ration

41% Cottonseed meal, o. p. linseed meal, gluten feed, yellow corn meal or hominy, ground oats, wheat bran, wheat middlings, molasses, steamed bone meal, salt, calcium carbonate.

Community Milk Laying Mash

Hominy or corn meal, ground oats, gluten feed, wheat bran, wheat middlings, meat scraps, dried milk, alfalfa meal, salt, bone meal, calcium carbonate.

Hilltop 20% Dairy Ration

41% Cottonseed meal, o. p. linseed meal, gluten feed, hominy or corn meal, Sugared Vim (oatfeed-molasses), wheat bran, bone meal, salt, calcium carbonate.

Nicolas Courcy

Courcy's Eastern Laying Mash

Yellow corn meal, wheat bran, wheat middlings, feeding oat meal, alfalfa leaf meal, dry or skim milk, 50% beef scraps, fish meal, bone meal, salt, calcite flour, with 1% cod liver oil or without.

Courcy's Growing Feed

Wheat bran, middlings, yellow corn meal, feeding oat meal, 50% scraps, linseed oil meal, bone meal, fish meal, calcite flour, leaf meal, milk, salt.

Eastern Dairy Feed

Bran, wheat middlings, Diamond gluten, 41% or 43% cottonseed, 34% linseed meal, yellow corn meal or hominy, salt, calcite flour.

Eastern Starting Feed

Bran, middlings, yellow corn meal, ground oat groats, bone meal, dry or skim milk, leaf meal, fish meal, 60% beef scraps, cracked wheat, hulled oats, fine salt, calcite flour, 1% cod liver oil or cod liver meal.

Cover & Palm Co.

The Perfect Dry Mash

Alfalfa meal, hominy feed, corn meal, wheat mixed feed, animal meal, gluten feed, linseed oil meal, beef scraps, oats, and oat feed, kaffir corn meal, dried buttermilk.

E. A. Cowee Co.

Coweco Growing Mash

Wheat bran and middlings, corn meal, oat meal, meat scraps, fish meal, buttermilk, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Laying Mash

Wheat bran and middlings, oat meal, gluten feed, linseed meal, meat scraps, fish meal, corn meal, buttermilk, alfalfa meal, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Lo-Price 20% Dairy Ration

Bran, middlings, ground oats, cottonseed meal, corn meal, gluten meal, linseed meal, ground barley, soya bean meal, cane molasses, bone meal, calcium carbonate and salt.

Coweco 1925 Ration

Wheat bran and middlings, corn meal, cottonseed meal, gluten feed, linseed meal, hominy, ground oats, brewers' grains, soya bean meal, edible bone meal, salt, calcium carbonate, and molasses.

Coweco 20% Ration

Wheat bran and middlings, gluten feed, corn meal, linseed meal, soya bean meal, ground oats, cottonseed meal, brewers' grains, molasses, edible bone meal, calcium carbonate and salt.

Coweco Starting Mash

Corn meal, oat meal, wheat bran and middlings, alfalfa leaf meal, fish meal, meat scraps, edible bone meal, buttermilk, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Curley Brothers**Crystal 24% Dairy Ration**

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers grains, hominy feed, ground barley, ground oats, bran, middlings, edible bone meal, salt, calcium carbonate.

Crystal Dairy 20 Ration

Corn gluten feed, yellow corn meal, hominy feed, bran, middlings, cottonseed meal, linseed oil meal, beet pulp, steamed edible bone meal, calcium carbonate, salt.

Crystal Egg Mash (with Dried Milk)

Yellow hominy feed, yellow corn meal, bran, middlings, feeding oatmeal, red dog flour, alfalfa poultry greens, beef scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash (with Dried Milk)

Cod liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran, middlings, feeding oatmeal, yellow hominy feed, yellow corn meal, salt, calcium carbonate.

J. Cushing Co.**Big C Mash**

Corn feed meal (or yellow hominy), mixed feed heavy, gluten feed, oil meal, meat scraps 5%, alfalfa fine ground, ground oats, bone meal, calcium carbonate, salt.

Big C Special Dairy Feed

36% Cottonseed meal, old process oil meal, hominy, corn gluten feed, wheat bran, wheat midds, ground oats, salt, steamed bone meal, calcium carbonate.

Diamond A Dairy Feed

Corn meal, old process oil meal, gluten feed, wheat bran, dried brewers grains, gluten meal, 36% cottonseed meal, Stock Feed, salt, calcium carbonate.

Diamond C Dairy Feed

Wheat bran, wheat midds, hominy (or corn meal), 36% cottonseed meal, old process oil meal, beet pulp, gluten feed, gluten meal, salt.

Quality 24% Dairy

Wheat bran, brewers grains, ground oats, corn feed meal, coconut oil meal, old process oil meal, gluten feed, cottonseed meal, soy bean meal, molasses, 1% bone meal, 1% ground limestone, 1% salt.

Quality 20% Dairy Feed

Corn feed meal, ground oats, soy bean meal, brewers grains, chaff & screenings, coconut oil meal (or copra meal), wheat bran, gluten feed, 41% cottonseed meal, old process oil meal, cane molasses, calcium carbonate, steamed bone meal, salt.

Quality Laying Mash

Corn feed meal, ground or pulverized oats, alfalfa meal, wheat midds, wheat bran, gluten feed, old process oil meal, calcium carbonate, 45% meat scraps, steamed bone meal, fish meal, dried buttermilk or dried skim milk, salt.

Sweet 20 Dairy Feed

Corn feed meal, gluten feed, gluten meal, Hexite (or hominy), oat feed, bran, cottonseed meal, barley meal, salt, calcium carbonate, molasses.

Vigor 16% Dairy

Corn gluten feed, dried brewers grains, cottonseed meal, soy bean meal, cane molasses, coconut oil meal, old process oil meal, wheat midds, wheat bran, oatmeal by-products (oat midds, oat hulls, oat shorts), reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Cutler Co.

King 20 Dairy Feed Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

King Dairy Feed with Beet Pulp Sweetened

Dried beet pulp, cottonseed meal, old process linseed meal, wheat bran, wheat middlings, corn gluten feed, yellow corn meal, pure ground oats, edible bone meal, pure cane molasses and dairy salt.

Delaware Mills, Inc.

Delaware All Mash Chick Food

Cod liver oil, dried skim milk, meat scrap, fish meal, oatmeal, linseed oil meal, alfalfa leaf meal, corn meal, wheat bran, wheat middlings, wheat meal, bone meal, calcium phosphate, charcoal, salt.

Delaware Growing Mash (with Dried Skim Milk)

Dried skim milk, alfalfa leaf meal, meat scrap, fish meal, bone meal, linseed oil meal, corn gluten feed, corn feed meal, wheat bran, wheat middlings, wheat flour middlings, oat meal, wheat meal, calcium phosphate, $\frac{1}{2}$ of 1% salt.

Delco 24% Dairy Feed.

Linseed oil meal, corn gluten feed, coconut oil meal, peanut meal, cottonseed meal, wheat bran (which may contain mill run screenings), wheat middlings, corn meal, calcium carbonate, salt.

Delco 20% Dairy Feed

Dried beet pulp, linseed oil meal, corn gluten feed, corn gluten meal, coconut oil meal, peanut meal, cottonseed meal, wheat bran, wheat middlings, hominy feed, ground oats, salt, calcium carbonate.

Indian Laying Mash (with Dried Skim Milk)

Dried skim milk, meat scrap, fish meal, bone meal, linseed oil meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn feed meal, ground barley, ground oats, cottonseed meal, calcium phosphate, and salt.

F. Diehl & Son, Inc.

Diehl's Dairy Feed

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products, ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, Banner Feed, bone, buttermilk, charcoal, fish scraps, gluten meal, linseed meal, meat scraps, middlings and red dog.

Eastern Grain Co.

Eastern All-Purpose Chick and Broiler Ration

Yellow corn meal, wheat bran, wheat middlings, ground oat groats, high grade meat scraps, fish scraps, dried milk powder, edible bone meal, calcium carbonate, fine salt, pure cod liver meal, vitamin tested cod liver oil, leaf alfalfa meal.

Eastern All-Purpose Dairy Feed

Bran, middlings, corn meal, ground barley, oatmeal mill by-products (oat middlings, oat shorts, oat hulls), linseed meal, gluten feed, gluten meal, cottonseed meal, pure cane molasses, high grade edible bone meal.

Eastern Complete Ration for Layers

Wheat bran, ground wheat, oat groats, ground yellow corn, high grade beef scraps, fish meal, dried milk, alfalfa leaf meal, edible bone meal, calcium carbonate, fine salt, wheat middlings, pure cod liver meal.

Eastern 24% Dairy Feed Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers, ground oats, Buffalo gluten, peanut meal, Diamond gluten, ground barley, corn meal, pure cane molasses, high grade edible bone meal, salt, calcium carbonate.

Eastern 20% Dairy Feed Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, peanut meal, Diamond gluten, ground barley, corn meal, pure cane molasses, high grade edible bone meal, calcium carbonate, salt.

Eastern States Farmers' Exchange

Eastern States Developer with Cod Liver Oil

E. S. No. 2 yellow corn meal—attrition, standard wheat bran, wheat flour middlings, E. S. barley—ground, E. S. pure ground oats (No. 2—38 lb. clipped—unsul.), dry skim milk, soy bean oil meal, alfalfa leaf meal, E. S. meat scraps 50%, pure fish meal 55%, dicalcium phosphate, oyster shell meal, cod liver oil, salt.

Eastern States Fulpail Dairy Ration

Standard wheat bran, choice yellow hominy, E. S. pure ground oats (No. 2—38 lb. clipped—unsul.), corn gluten feed, E. S. choice cottonseed meal, soy bean oil meal, old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Highland 20

E. S. choice cottonseed meal, oat shorts, oat middlings, oat hulls, choice yellow hominy, dried brewers grains, standard wheat bran, molasses, soy bean oil meal, corn gluten meal, dicalcium phosphate, salt.

Eastern States Highland 16

Choice yellow hominy, oat shorts, oat middlings, oat hulls, standard wheat bran, dried brewers grains, E. S. choice cottonseed meal, molasses, corn gluten meal, soy bean oil meal, dicalcium phosphate, salt.

Eastern States Milk Egg Mash with Cod Liver Oil

E. S. No. 2 yellow corn meal—attrition, standard wheat bran, wheat flour middlings, E. S. pure ground oats (No. 2—38 lb. clipped—unsul.), E. S. meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, dry skim milk, oyster shell meal, cod liver oil, dicalcium phosphate, salt.

Eastern States Milkmore Dairy Ration

E. S. choice cottonseed meal, choice yellow hominy, corn gluten feed, soy bean oil meal, standard wheat bran, E. S. pure ground oats (No. 2—38 lb. clipped—unsul.), old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Sixteen

Choice yellow hominy, standard wheat bran, E. S. pure ground oats (No. 2—38 lb. clipped—unsul.), E. S. choice cottonseed meal, corn gluten feed, old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Turkey-Start

E. S. No. 2 yellow corn meal—attrition, E. S. meat scraps 50%, standard wheat bran, dry skim milk, wheat flour middlings, ground oat groats, pure fish meal 55%, alfalfa leaf meal, cod liver oil, oyster shell meal, dicalcium phosphate, salt.

Michael W. Ellis

The Ellis Dairy Feed

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers grains, cottonseed meal, oil meal, ground oats, calcite flour, salt, edible bone meal. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten feed, corn meal, rolled oats or feeding oatmeal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal, calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.

Elmore Growing Mash

Dried buttermilk, meat meal, bone meal, wheat midds, wheat bran, low grade wheat flour, alfalfa leaf meal, corn meal, oat flake, gluten feed, salt, cod liver oil.

Elmore Milk Grains

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers grains, calcium carbonate, salt.

Economilk Dairy Feed

Wheat bran, wheat midds, ground barley, cottonseed meal, corn gluten feed, hominy feed, soybean meal, cane molasses, reground wheat screenings, calcium carbonate, salt.

Elmore Chixsaver

Dried milk, wheat flour midds, wheat bran, corn meal, alfalfa leaf meal, oat flour, meat & bone meal, fish meal, cod liver oil, fine table salt.

Elmore's Economilk 24% Dairy Feed

Wheat bran, wheat middlings, cotton seed meal, ground whole barley, soybean meal, corn gluten feed, cane molasses, reground wheat screenings, calcium carbonate, salt.

Elmore Eggmaker

Dried buttermilk, meat & bone meal, wheat bran, wheat red dog midds, corn meal, fish meal, ground oats, calcium carbonate, salt.

Elmore Egg Mash

20% dried buttermilk and meat scraps, 2nd clear wheat flour, pure ground oats, wheat middlings, alfalfa leaf meal, corn meal or hominy feed, wheat bran, cod liver oil, not more than 1% calcium carbonate, salt.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cottonseed meal, wheat bran, linseed oil meal, cocoanut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Otsego Economy Ration

O. p. oil meal, cottonseed meal, corn gluten feed, wheat bran, corn gluten meal, corn meal, cane molasses, copra oil meal, phosphatic calcium carbonate, ground oats, salt.

John W. Eshelman & Sons

Eshelman Certified 20% Dairy Ration

Corn gluten feed, choice hominy feed, pure grd. 38 lb. No. 2 white clipped oats, 34% pro. o. p. oil meal, standard wheat bran, 41% pro. cottonseed meal, soybean oil meal, standard wheat middlings, corn distillers' dried grains, cane molasses, steamed bone meal, calcium carbonate, salt.

Eshelman Conestoga 20 Dairy Feed

Wheat bran, corn gluten feed, dried brewers' grain, cottonseed meal, cane molasses, wheat middlings, soybean oil meal, coconut oil meal, o. p. oil meal, oat meal mill by-product (oat midds, oat hulls, oat shorts), reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, corn gluten feed, wheat middlings, dried brewers' grains, cane molasses, cottonseed meal, soybean oil meal, corn feed meal, ground oats, coconut oil meal, o. p. oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose 24 Dairy Feed

Wheat bran, corn gluten feed, dried brewers' grains, coconut oil meal, cottonseed meal, o. p. oil meal, soybean oil meal, cane molasses, corn feed meal, ground oats, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Laying Mash

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o. p. oil meal, fish meal, hominy feed, 3% fine alfalfa meal, 1½% milk sugar feed (dried whey), 1½% dried buttermilk, ½% salt.

Flory Milling Co., Inc.

Flory's Egg Mash with Cod Liver Oil

Ground oat groats, dried buttermilk, milk sugar feed, wheat flour middlings, yellow corn meal, corn gluten meal, wheat bran, fine ground barley, meat meal, fish meal, alfalfa leaf meal, linseed oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil, crab meal.

Fred A. Fountain

Fountain's Buttermilk Growing Feed

Dry buttermilk or dry skimmilk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, table salt.

Fountain's Buttermilk Laying Mash

Dry buttermilk or dry skimmilk, beef scrap, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, fish meal, table salt.

Fountain's Buttermilk Starting Feed

Dry buttermilk or dry skimmilk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, calcium carbonate, table salt.

J. B. Garland & Son

Garland's Economy 20% Dairy Ration

Bran, middlings, cottonseed meal, gluten meal, linseed meal, ground barley, soy bean meal, cane molasses, bone meal, calcium carbonate and salt.

Garland's Fancy Chick Mash

Wheat bran and middlings, oat meal, corn meal, alfalfa leaf meal, meat scraps, bone meal, fish scraps, dried buttermilk, calcium carbonate, salt and cod liver oil.

Garland's Poultry Mash

Wheat bran and middlings, corn meal, gluten meal, oat meal, alfalfa, meat scraps, fish meal, dried milk, calcium carbonate, salt, bone meal. (With or without cod liver oil.) (With or without cane molasses.)

Garland's 24% Ration

Wheat bran, middlings, corn meal, hominy, gluten feed, linseed meal, cottonseed meal, soy bean meal, ground oats, brewers grains, calcium carbonate, salt and cane molasses.

Royal Worcester Complete Ration

Gluten feed, linseed, ground oats, wheat bran, middlings, corn meal, cottonseed meal, soy bean meal, beet pulp, salt, calcium carbonate, bone meal and cane molasses.

General Mills, Inc.

Eventually Gold Medal Dairy Ration

Wheat bran, wheat germ, standard wheat middlings with ground grain screenings not exceeding mill run, pulverized oats, yellow corn meal, corn gluten feed, cottonseed meal, linseed oil meal, phosphatic limestone 23½%, salt 3½%.

Eventually Gold Medal Egg Mash for Breeding and Laying with Dried Buttermilk

Yellow corn meal, standard wheat middlings with ground grain screenings not exceeding mill run, corn gluten feed, wheat red dog, fine ground oat groats, alfalfa meal, wheat germ, linseed oil meal, sifted meat scraps, dried buttermilk, phosphatic limestone 1%, salt $\frac{1}{2}$ %.

Eventually Gold Medal Growing Mash with Dried Buttermilk

Corn oil meal, yellow corn meal, standard wheat middlings with ground grain screenings not exceeding mill run, fine ground oat groats, alfalfa meal, sifted meat scraps, dried buttermilk, wheat germ, phosphatic limestone $2\frac{1}{4}$ %, salt $\frac{3}{4}$ %.

W. K. Gilmore & Sons, Inc.

"Neponset Poultry Mash"

Wheat bran, wheat middlings, corn meal, ground oats, alfalfa, beef scraps, fish scraps, linseed oil meal, corn gluten feed, ground rolled oats, calcite flour, dried skim milk, fine salt.

D. H. Grandin Milling Co.

Grandin's Baby Chick Starter with Buttermilk—Cod Liver Oil

Dried buttermilk, fine ground hulled oats, ground wheat, corn meal, hominy feed, wheat middlings, alfalfa leaf meal, calcium carbonate, bone meal, one half of one per cent salt and cod liver oil.

Grandin's 24% Balanced Dairy Ration

Distillers dried grains, cottonseed meal, coconut oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Complete Starting Ration with Buttermilk—Cod Liver Oil

Dried buttermilk, cod liver oil, ground meat and bone, fish meal, wheat bran, wheat middlings, alfalfa leaf meal, hominy feed, ground yellow corn, pulverized oats, ground wheat, ground hulled oats, ground barley, calcium carbonate and salt.

Grandin's Growing Mash with Buttermilk

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Growing Mash with Buttermilk—Cod Liver Oil

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate, salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate and a small percentage of salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk—Cod Liver Oil

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate, a small percentage of salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Milk Maker

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, beet pulp, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 24% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 16% Dairy Feed.

Linseed oil meal, cottonseed meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground barley, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's 12 Twin Six 12 Dairy Feed

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, alfalfa meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

M-S (Money Saver) 20% Sweet Dairy Feed

Cottonseed meal, corn gluten feed, linseed oil meal, wheat bran, wheat middlings, ground barley, corn meal, corn feed meal, hominy feed, ground grain screenings, oat meal by-products (oat middlings, oat hulls, oat shorts), cane molasses, steamed bone meal, calcium carbonate and salt.

Great Atlantic & Pacific Tea Co.

Daily Egg Mash Feed.

Ground oats, ground barley, soybean oil meal, old process linseed oil meal, corn gluten meal, wheat standard middlings, wheat bran, alfalfa meal, corn feed meal, dried buttermilk, dried skim milk, meat and bone scrap, fish meal, flour middlings, cod liver oil, cod liver meal, calcium carbonate from limestone 2.5%, steamed bone meal 1½%, salt ½%, red iron oxide 1-10% and .0015% potassium iodine.

Hales & Hunter Co.

Morning Glory Egg Mash with Dried Buttermilk

Corn feed meal, ground oats, wheat bran, wheat middlings, corn gluten feed, soy bean meal, alfalfa meal, dried buttermilk, meat scraps and not over 5% minerals, (calcium carbonate, granulated charcoal and salt.)

Red Comb Egg Mash with Dried Buttermilk

Corn feed meal, feeding oat meal, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean meal, dried buttermilk and not over 5% minerals, (calcium carbonate, sodium chloride, steamed bone meal, granulated charcoal, iron sulphate, sulphur.)

Horvitz Grain Co.

Make M-Lay Laying Mash

Wheat bran, corn meal, gluten feed & gluten meal, ground oats, ground barley, red dog, wheat middlings, linseed meal, meat scraps, calcium carbonate, charcoal.

Open Formula Mash

Coarse corn meal, wheat bran, white middlings, ground oats 40-42, meat scraps 55% protein, alfalfa leaf meal, steamed bone meal, dried milk, common salt.

Wantmore Dairy Ration

Hominy feed or corn meal, wheat bran, ground oats, gluten feed & gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, calcium carbonate.

Wantmore Dairy with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed & gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, calcium carbonate.

Jersee Co.

Just Right Egg Mash

Meat scraps, charcoal, ground bone, salt, wheat middlings, wheat bran, ground oats, ground corn, powdered whole & skim milk, St. John's bread, starch, calcium phosphate, anise, dried blood, oxide iron, fish meal and alfalfa meal.

Larroe Milling Co.

Larro—The Ready Ration for Dairy Cows

Cottonseed meal, yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), o. p. linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, ¾% salt.

Larro Chick Starter

Oatmeal, yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), dried skimmilk, dried buttermilk, meat and bone scraps, wheat bran, alfalfa meal, cod liver oil vitamin extract, ½% salt, 1½% phosphatic limestone.

Larro Egg Mash

Oatmeal, standard wheat middlings (with ground grain screenings not exceeding mill run), yellow corn meal, alfalfa meal, wheat bran, meat and bone scraps, dried buttermilk, dried skimmilk, cod liver oil vitamin extract, 2½% phosphatic limestone, ¾% salt.

Larro Growing Mash

Yellow corn meal, oatmeal, wheat bran, standard wheat middlings (with ground grain screenings not exceeding mill run), meat and bone scraps, dried buttermilk, dried skimmilk, alfalfa meal, cod liver oil vitamin extract, 2% phosphatic limestone, ½% salt.

Mansfield Milling Co.

"Mansfield" Chick-Growing-Feed

Wheat bran, red dog flour, corn meal, oat meal, fish scraps, meat scraps, dried milk and charcoal.

"Mansfield" Cow-Ration

Wheat bran, corn meal, ground oats, ground barley, cotton seed meal, linseed meal, gluten feed, gluten meal and salt.

"Mansfield" Dry-Poultry-Mash

Wheat bran, wheat middlings, red dog flour, corn meal, gluten feed, dried milk and meat scraps.

Maritime Milling Co., Inc.

B B Bull Brand Dairy Ration

Dried brewers grains, o. p. linseed oil meal, cotton seed meal, corn gluten feed, soya bean meal, hominy feed, corn meal, wheat bran, wheat middlings, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Sweetened B. B. Bull Brand "24" Dairy Ration

Dried brewers grains, o. p. linseed oil meal, cotton seed meal, corn gluten feed, soya bean meal, hominy feed, corn meal, wheat bran, wheat middlings, molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

B-B Hi-Test Dairy Feed 20% Protein Sweetened

Dried brewers grains, o. p. linseed oil meal, cotton seed meal, corn gluten feed, soya bean meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B-B Marmico 16% Protein Dairy Feed with Molasses

Dried brewers grains, soya bean meal, cotton seed meal, corn gluten feed, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, oat hulls, oat shorts, oat midds, molasses, steamed bone meal, calcium carbonate and salt.

Mennel Milling Co.

Memo 22% Sweet Dairy Feed

Corn feed meal, cottonseed meal, gluten feed, wheat bran, linseed oil meal, brewers dried grains, ground grain screenings, molasses, $\frac{1}{2}$ of 1% salt.

Narragansett Milling Co.

Narragansett Indian Chick Starter

Yellow corn meal, wheat flour middlings, pure dried buttermilk, beef scraps, fish meal, alfalfa leaf meal, bone meal, fine ground feeding oat meal, charcoal, salt, mineral mixture, cod liver oil.

Narragansett Indian Egg Mash

Dried buttermilk, meat and fish scraps, wheat middlings, yellow corn meal, wheat bran, corn gluten feed, ground oats, ground barley, hominy feed, o. p. oil meal, alfalfa leaf meal, salt.

Narragansett Indian Growing Mash

Dried buttermilk, meat and fish scraps, wheat middlings, corn feed meal, wheat bran, corn gluten feed, pure oat meal, ground oats, ground barley, hominy feed, o. p. oil meal, alfalfa meal, $\frac{1}{4}$ % salt.

New England Dairy Ration

Corn gluten meal, corn gluten feed, bran, yellow corn meal, o. p. linseed meal, ground oats, cotton seed meal, reground oat feed with molasses, calcium carbonate, salt.

Ontario Milling Co., Inc.

Aunt Mary's Growing Mash with Dried Buttermilk

Dried buttermilk, dried skim milk, meat meal, fish meal, oat meal, alfalfa meal, corn feed meal, wheat bran, wheat middlings, steamed bone meal, calcium carbonate, $\frac{1}{2}$ of 1% salt.

Aunt Mary's Laying Mash with Dried Buttermilk

Dried buttermilk, dried skim milk, meat meal, fish meal, steamed bone meal, oat meal, calcium carbonate, old process linseed oil meal, hominy feed or corn feed meal, corn gluten feed, wheat bran, wheat middlings, alfalfa meal, 1% salt. (Wheat feeds may contain ground screenings not to exceed mill run.)

Big Value 20% Dairy Feed with Molasses

Cottonseed meal, soya bean oil meal, wheat bran, wheat middlings, cocoanut oil meal, old process linseed oil meal, corn gluten feed, corn gluten meal, hominy feed or corn feed meal, ground oats, molasses, 1% calcium carbonate, 1% salt. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Butterfat Dairy Feed with Molasses

Old process linseed oil meal, wheat bran, corn gluten feed, corn gluten meal, hominy feed or corn feed meal, wheat middlings, cottonseed meal, soybean oil meal, cocoanut oil meal, ground barley, ground oats, molasses, 1% calcium carbonate, 1% salt. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Oswego 20% Dairy Feed with Molasses

Cottonseed meal, soybean oil meal, wheat bran, wheat middlings, corn gluten feed, hominy feed or corn meal, o. p. linseed oil meal, dried brewers grains, ground wheat screenings, oat meal mill by-products (oat middlings, oat shorts and oat hulls), ground oats, molasses, 1% steamed bone meal, 1% salt, 1% calcium carbonate. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Oswego Laying Mash with Dried Buttermilk

Dried buttermilk, meat meal, fish meal, oat meal, old process linseed oil meal, hominy feed or corn feed meal, corn gluten feed, wheat bran, wheat middlings, wheat flour middlings, ground oats, alfalfa meal, steamed bone meal, calcium carbonate, 1% salt. (Wheat feeds may contain ground screenings not to exceed mill run.)

Uncle John's 24% Cream Pot Ration

Cottonseed meal, soybean oil meal, corn gluten feed, corn gluten meal, old process linseed oil meal, hominy feed or corn feed meal, cocoanut oil meal, wheat bran, wheat middlings, 1% bone meal, and 1% salt. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Park & Pollard Co.

Bet-R-Milk 20% Ration

Corn gluten feed, linseed oil meal, cottonseed meal, malt sprouts, wheat bran, wheat middlings may contain mill run of screenings, hominy feed, Iodol fish meal, molasses, calcium carbonate and salt.

Growing Feed

Dried buttermilk, alfalfa leaf meal, Iodol fish meal, linseed oil meal, meat and bone meal, wheat bran and wheat middlings (may contain mill run of screenings), calcium carbonate, salt, ground: corn, wheat, oats, barley.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings (may contain mill run of screenings), calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Milk-Maid 24% Sweetened Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran may contain mill run of screenings, brewers dried grains, malt sprouts, corn gluten meal, copra oil meal, corn meal, Iodol fish meal, molasses, calcium carbonate and salt.

Overall 24% Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, wheat middlings may contain mill run of screenings, corn gluten meal, hominy feed, calcium carbonate and salt.

Park & Pollard Chick Starter

Dried buttermilk, vitamin tested cod liver oil, ground: corn, wheat, barley, oat meal, Iodol fish meal, meat and bone meal, wheat bran, wheat middlings, alfalfa leaf meal, rice, calcium carbonate and salt.

Postum Co., Inc.

Burt's Dairy Feed

Cereal and Postum by-products: (corn, wheat, wheat bran, wheat middlings, wheat flour, barley malt flour, barley malt hulls, may contain trace of screenings), hominy feed, gluten meal, old process oil meal, choice cottonseed meal, calcium carbonate and salt.

Pratt Food Co., Inc.

Pratts All-Mash Chick Starter with Buttermilk

Dried buttermilk, alfalfa leaf meal, oat meal, meat scrap, corn meal, wheat bran and wheat middlings, (may contain mill-run ground screenings), bone meal, calcium carbonate 1½%, calcium phosphate ½ of 1%, iodized salt 1%.

Pratts Baby Chick Food with Buttermilk

Dried buttermilk, alfalfa leaf meal, oat meal, cooked wheat, ground wheat, meat scrap, corn meal, wheat middlings (may contain mill-run ground screenings), rape, millet, Epsom salts, bone meal, calcium carbonate 1¾%, calcium phosphate ¾ of 1%.

Pratts B-P Dairy Feed

Beet pulp, o. p. linseed oil meal, hominy feed, cottonseed meal, corn meal, wheat bran (may contain mill-run ground screenings), corn gluten feed, oat meal, molasses, calcium carbonate ¾ of 1%, calcium phosphate ¼ of 1%, iodized salt 1%.

Pratts Cak-Cak Egg Mash with Buttermilk, Fish, Meat, Etc.

Dried buttermilk, pulverized oats, o. p. linseed oil meal, meat scrap, fish meal, corn meal, alfalfa meal, yellow hominy feed, wheat bran and wheat middlings (may contain mill-run ground screenings), bone meal, calcium carbonate ¾ of 1%, calcium phosphate ¼ of 1%, iodized salt ½ of 1%.

Pratts Laying Mash with Buttermilk

Dried buttermilk, oat meal, wheat germ meal, meat scrap, fish meal, corn meal, ground barley, o. p. linseed oil meal, alfalfa meal, wheat bran and wheat middlings (may contain mill-run ground screenings), calcium carbonate 1½%, calcium phosphate ½ of 1%, iodized salt ½ of 1%.

H. C. Puffer Co.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings (not exceeding mill run of screenings), corn feed meal, corn gluten feed, ground oats, linseed meal, alfalfa meal, small percentage salt and calcium carbonate.

Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, ground oats, corn feed meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Sweetened Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, corn feed meal, wheat bran and wheat middlings (not exceeding mill run of screenings), oat feed, molasses, small percentage salt and calcium carbonate.

Quaker Oats Co.**Quaker Ful-O-Pep Chick Starter**

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat middlings, fish meal, cod liver meal, cod liver oil, dried skimmed milk, dried buttermilk, molasses, alfalfa, 2% steamed bone meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat middlings, barley meal, fish meal, cod liver meal, meat scraps, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker 24% Protein Dairy Ration

Hominy feed, yellow hominy feed, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oatmeal mill by-product (oat middlings, oat shorts, oat hulls), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker 20% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley meal, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oatmeal mill by-product (oat middlings, oat shorts, oat hulls), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Ralston Purina Co.**Protina 20% Dairy Feed**

Cottonseed meal, corn gluten feed, brewers dried grains, wheat middlings (standard), wheat bran, molasses, 1% iodized salt.

Purina All Mash Startena Chow

Dried buttermilk, cod liver oil, meat scrap, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Breeder Egg Chowder

Dried buttermilk, cod liver oil, alfalfa leaf meal, meat scrap, soy bean oil meal, linseed meal, corn germ meal, wheat middlings, wheat bran, corn meal, alfalfa meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina 34% Cow Chow

Linseed meal, soy bean oil meal, corn gluten meal, cottonseed meal, alfalfa meal, molasses, 1% iodized salt.

Purina 24% Cow Chow

Linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings (standard), wheat bran, alfalfa meal, molasses, 1% iodized salt.

Purina 20% Cow Chow

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings (standard), wheat bran, corn meal, alfalfa meal, molasses, 1% iodized salt.

Purina Egg Chowder

Meat scrap, soy bean oil meal, linseed meal, alfalfa leaf meal, corn germ meal, wheat middlings, wheat bran, corn meal, alfalfa meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Lay Chow

Soy bean oil meal, meat scrap, molasses, alfalfa meal, corn meal, wheat middlings, wheat bran, 1% iodized salt, 4% calcium carbonate (limestone).

Ryther & Warren**Blue Tag Dairy Ration**

41% Cottonseed meal, o. p. oil meal, gluten feed, hominy, wheat bran, wheat middlings, ground oats, dried beet pulp and salt and calcium carbonate.

Minot Milk Egg Mash

Yellow corn meal, wheat bran, flour middlings, ground 40 lb. oats, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, steamed bone meal, dried milk, salt.

Minot Poultry Mash

Wheat bran, wheat middlings, red dog, corn meal, gluten feed, alfalfa meal, ground oats, oat flour, fish and meat scraps and one half of one per cent of salt.

St. Albans Grain Co.

Hygrade 24 Sweetened Milk Ration

Corn gluten meal, corn gluten feed, old process linseed meal, cottonseed meal, brewers' dried grains, corn meal, ground oats, ground barley, wheat bran, wheat middlings, steamed bone meal, calcium carbonate, dairy salt and pure cane molasses.

Hygrade 20 Sweetened Milk Ration

Old process linseed meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, steamed bone meal, calcium carbonate and dairy salt.

Hygrade 16 Sweetened Milk Ration

Old process linseed meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, steamed bone meal, calcium carbonate and dairy salt.

Utility Dairy Ration

Old process linseed meal, corn gluten feed, cottonseed meal, corn meal, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, steamed bone meal, calcium carbonate, pure cane molasses and dairy salt.

Wirthmore Baby Chick Starter containing Cod Liver Meal, Buttermilk, Cod Liver Oil

Cod liver oil, cod liver meal, pure dried buttermilk, dried skim milk, alfalfa leaf meal, fish meal, fine ground beef scraps, edible bone meal, pure wheat bran, pure wheat middlings, ground hulled oats, ground wheat, yellow corn meal, corn germ meal, calcium carbonate and salt.

Wirthmore 25 Balanced Ration Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, pure ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Breeder Mash

Cod liver oil, dried buttermilk, dried skim milk, meat scraps, fish meal, yellow corn meal, corn germ meal, alfalfa leaf meal, linseed oil meal, corn gluten meal, wheat bran, wheat middlings, pulverized oats and barley, calcium carbonate and salt.

Wirthmore 20 Dairy Feed

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore 20 Dairy Feed Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Dairy Feed with Beet Pulp Sweetened

Dried beet pulp, cottonseed meal, old process linseed meal, wheat bran, wheat middlings, corn gluten feed, yellow corn meal, pure ground oats, edible bone meal, pure cane molasses and dairy salt.

Wirthmore 16 Dairy Ration Sweetened

Corn gluten meal, corn distillers' dried grains, corn gluten feed, old process linseed meal, brewers' dried grains, yellow corn meal, pure ground oats, wheat bran, wheat middlings, cottonseed meal, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Growing Mash containing Buttermilk

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, edible bone meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, milo maize, wheat bran, wheat middlings, wheat red dog flour, calcium carbonate and salt.

Wirthmore Laying Mash with Buttermilk

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, linseed meal, corn gluten feed, wheat bran, wheat middlings, ground rolled oats, oats, barley, buckwheat, milo maize, calcium carbonate and salt.

Wirthmore Turkey Growing Feed

Cod liver oil, pure dried buttermilk, dried skim milk, fine ground beef scraps, fish meal, edible bone meal, yellow corn meal, corn germ meal, wheat bran, wheat middlings, wheat red dog flour, ground oats, ground barley, cracked wheat, alfalfa leaf meal, calcium carbonate and salt.

C. H. Symmes

The Ideal Dairy Ration

Wheat middlings, wheat bran, brewers grains, cottonseed meal, linseed meal, gluten meal, gluten feed, corn meal or hominy, molasses, salt, bone meal, calcium carbonate, ground barley.

Syracuse Milling Co.

Syracold Dairy Feed

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, brewers' dried grains, calcium carbonate and salt.

Syracold Egg Mash

Ground corn, ground barley, wheat flour, wheat middlings and bran with mill run screenings, alfalfa meal, ground meat and bone, fish and salt.

Syracold Growing Mash

Wheat flour, wheat middlings with mill run screenings, ground barley, ground corn, alfalfa meal, dried buttermilk, fish meal, ground meat and bone, calcium carbonate and salt.

Tioga-Empire Feed Mills, Inc.

Egatine

Wheat middlings, corn meal, corn gluten meal, wheat bran, meat and bone scrap, pulverized oats, fish meal, soya bean oil meal, phosphate of lime, dried skim milk. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

E-Gee Dairy Feed

Wheat bran, cottonseed meal, corn gluten feed, soya bean oil meal, hominy feed, wheat middlings, cane molasses, salt, phosphate of lime, charcoal, iodine, malt sprouts. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Red Brand Ti-O-Ga Dairy Feed

Cottonseed meal, soya bean oil meal, coconut oil meal, wheat bran, wheat middlings, cane molasses, hominy feed, peanut oil meal, corn gluten feed, salt, phosphate of lime, charcoal, iodine. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Ti-O-Ga Chick and Growing Mash

Corn meal, wheat middlings, wheat bran, soya bean oil meal, powdered buttermilk, phosphate of lime, fish meal, meat & bone scrap, pulverized oats, corn gluten meal, linseed oil meal, ground wheat. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Ti-O-Ga Laying Food

Wheat middlings, corn meal, wheat bran, pulverized oats, fish meal, soya bean oil meal, corn gluten meal, meat and bone scrap, dried skim milk, phosphate of lime, linseed oil meal, ground wheat. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

United Co-Operative Farmers, Inc.

United Farmers Milk Egg Mash

No. 2 yellow corn meal—attrition, standard wheat bran, wheat flour middlings, pure gr. oats (No. 2—38 lb. clpd-unsul.), meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, pure dried buttermilk, steamed bone meal, salt.

United Farmers Milkmaker

Choice yel. hominy, pure gr. oats (No. 2—38 cl-un), stand. wheat bran, choice cottonseed meal, old pro. linseed oil meal, corn gluten feed, soy bean oil meal, molasses, corn dist. dried grains, steamed bone meal, calcium carbonate, salt.

United Farmers Milk Pep

Choice cottonseed meal, old pro. linseed meal, choice yellow hominy, corn gluten feed, pure gr. oats (No. 2—38 cl-un), soy bean oil meal, stand. wheat bran, corn dist. dried grains, molasses, steamed bone meal, calcium carbonate, salt.

C. P. Washburn Co.

"Made Right" Balanced Ration

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewers' grains.

"Made Right" Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, gr. oatmeal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dr. skim milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil.

"Made Right" Molasses Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, linseed oil meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers' grains.

"Made Right" Starting and Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, wheat, soya bean meal, fish meal, dr. skim milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, & cod liver oil.

H. K. Webster Co.

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, cod liver meal blend and oil.

Blue Seal "21" Dairy Ration

Hominy feed, choice cottonseed meal, wheat bran, malt sprouts, peanut middlings, P. R. cane molasses, gluten meal, o. p. oil meal, ground oats, "Oregon" mineral mixture.

Blue Seal "20" Dairy Ration

Gluten feed, hominy feed, o. p. oil meal, ground oats, wheat bran, choice cottonseed meal, wheat middlings, P. R. cane molasses, edible bone meal, calcium carbonate, salt.

Blue Seal Improved All-Mash Ration

Ground whole corn, ground wheat, ground poultry oats, bran, middlings, h. g. meat scraps, dried skim milk, alfalfa leaf meal, P. R. cane molasses, salt, cod liver meal blend, steamed bone meal.

Blue Seal Improved Balanced Ration

Choice cottonseed meal, hominy feed, malt sprouts, gluten meal, wheat bran, P. R. cane molasses, peanut middlings, o. p. oil meal, ground oats, corn distillers grains, "Oregon" mineral mixture.

Blue Seal "Lo-Cost" Dairy Ration

Choice cottonseed meal, hominy feed, malt sprouts, gluten meal, wheat bran, wheat middlings, P. R. cane molasses, peanut middlings, ground barley, calcium carbonate, salt.

Blue Seal Milk Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, dried skim milk, 55% fish meal, alfalfa leaf meal, salt, cod liver oil, cod liver meal blend.

Blue Seal Starting Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, pure wheat bran, wheat flour middlings, high grade meat scraps, dried skim milk, alfalfa meal, calcium carbonate, salt, cod liver oil, cod liver meal blend.

Blue Seal University Laying Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, 55% fish meal, alfalfa leaf meal, salt, cod liver meal blend.

West-Nesbitt, Inc.

All Pure 20% Milk Ration

Choice cottonseed meal, corn gluten meal, old process linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt.

Pure Feed Dairy Ration.

Corn gluten feed, wheat middlings, wheat bran, beet pulp, hominy or corn meal, choice cottonseed meal, old process linseed oil meal, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt.

Pure Sweetfeed Dairy Ration

Corn gluten feed, soya bean meal, wheat middlings, wheat bran, hominy or corn meal, choice cottonseed meal, old process linseed oil meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt.

Pure Feed Eggmaker

Dried skim milk, bone and meat meal, old process linseed oil meal, corn gluten feed, wheat middlings, wheat flour middlings, hominy or corn meal, steamed bone meal, 1% calcium carbonate, 1% salt.

Super Pure Sweetfeed Dairy Ration

Corn gluten feed, soya bean meal, choice cottonseed meal, old process linseed oil meal, dried yeast grains, wheat bran, wheat middlings, hominy or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt.

Uniform Sweet Dairy Ration

Choice cottonseed meal, corn gluten feed, hominy feed or corn meal, wheat bran, oat middlings, oat shorts, oat hulls, pure cane molasses, 1% calcium carbonate, 1% salt.

Estate of M. G. Williams

Williams' Balanced Ration

Corn meal, or hominy or wheat meal, linseed meal, cottonseed meal, ground oats, gluten feed, wheat feed, bone meal and 1% salt.

Williams' Chick Starter and Broiler Ration

Corn meal, cut oat groats, beef scraps, middlings, bran, alfalfa leaf meal, dried skim milk, linseed meal, bone meal, lime, granulated charcoal and fine salt.

Williams' Dry Mash

Wheat bran, middlings, corn meal or wheat meal, ground oats, beef scraps, linseed meal, gluten feed, lime and fine salt.

Williams' Growing Feed

Corn meal or wheat meal, oatmeal, beef scraps, middlings, bran, second clear, alfalfa leaf meal, bone meal, linseed meal, granulated charcoal and fine salt and calcium carbonate.

Stanley Wood Gram Co.**Bliss Dairy Ration**

Meal (or hominy), cottonseed meal, wheat bran, linseed, wheat middlings, gluten meal, gluten feed, table salt, edible bone meal, calcium carbonate. (Beet pulp.)

Preferred Laying Mash.

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, yellow corn meal, wheat bran, pulverized oats, wheat middlings, edible bone meal, table salt, calcium carbonate.

Preferred Starting and Growing Mash

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, edible bone meal, table salt, calcium carbonate.

Woods Dairy Ration

Wheat middlings, malt sprouts, linseed, meal (or hominy), wheat bran, cottonseed meal, oat feed, gluten feed, molasses, salt, edible bone meal, calcium carbonate.

Microscopic Examination

During the past year particular attention has been paid to those feeds which experience has shown might be adulterated, or not in accordance with the guarantee of ingredients. Substitution appears to be practiced to a greater extent by local mixers and small manufacturers, not always, however, with the intent to defraud, but on account of the difficulty sometimes experienced in obtaining the ingredients guaranteed.

In one instance it was found that a manufacturer who held the contract for a cooperative was substituting brewers grains for distillers grains in the dairy mixtures, and also using a cooked cereal residue in place of wheat bran. While the feeding value of the feeds was not materially reduced, cheaper products were being substituted for more valuable ones, a cash saving which should have reverted to the consumer rather than to the benefit of the manufacturer. After receiving a cash settlement, the cooperative severed its relations with this manufacturer and placed its contract elsewhere.

In several instances this same manufacturer was found to have substituted a cooked cereal residue for wheat bran in his own line of feeds.

One dealer was found to have substituted an oat residue, wholly or in part, for ground oats in a poultry mash mixed to customer's order.

Feedstuffs on the whole appeared to be true to their ingredient guarantees.

Directory of Manufacturers Who Registered Feeding Stuffs for Sale in the State in 1932

- Acme-Evans Co., Indianapolis, Ind.
 Allied Mills, Inc., Chicago, Ill. (Registered also for Soya Products, Inc.)
 American Maize-Products Co., 100 East 42nd St., New York, N. Y.
 A. P. Ames Co., 10 Walnut St., Peabody, Mass.
 Arcady Farms Milling Co., 223 West Jackson Blvd., Chicago, Ill.
 Archer-Daniels-Midland Co., Minneapolis, Minn.
 Ashcraft-Wilkinson Co., Atlanta, Ga.
 Associated Farmers' Exchanges, Inc., 278 Main St., Greenfield, Mass.
 E. W. Bailey & Co., Montpelier, Vt.
 G. N. Bartemus Co., Concord, N. H.
 Beacon Milling Co., Inc., Cayuga, N. Y.
 Berkshire Coal & Grain Co. Inc., North Adams, Mass.
 Bisbee Linseed Co., Bankers' Trust Bldg., Philadelphia, Penn.
 Black Rock Milling Corp., 356 Hertel Ave., Buffalo, N. Y.
 Blish Milling Co., Seymour, Ind.
 Bolduc & Sons, New Bedford, Mass.
 Borden Grain Co., Taunton, Mass.
 Borden Sales Co., Inc., 350 Madison Ave., New York, N. Y.
 C. W. Brister & Son, Auburn, N. Y.
 A. H. Brown & Bros., Boston, Mass. (Registered by Mellin's Food Company of North America.)
 Geo. B. Brown, Ipswich, Mass.
 Buckeye Cotton Oil Co., Cincinnati, Ohio.
 C. E. Buell, Inc., 131 State St., Boston, Mass.
 C. W. Burckhalter, Inc., 119 Broad St., New York, N. Y.
 Butchers Rendering Co., Fall River, Mass.
 Butman Grain & Feed Co., Lynn, Mass.
 Cairo Meal and Cake Co., Cairo, Ill.
 Caledonia Mills, Inc., St. Johnsbury, Vt.
 Canada Linseed Oil Mills, Ltd., Montreal, Que., Canada.
 Cannon Valley Milling Co., Minneapolis, Minn.
 A. B. Caple Co., Sta. A, Box 27, Toledo, Ohio.
 Center Milk Products Co., Middlebury Center, Penn.
 Chapin & Co., Hammond, Ind.
 Clinton Corn Syrup Refining Co., Clinton, Iowa.
 Coles Co., Middletown, Conn.
 Collis Products Co., 201 Custer St., St. Paul, Minn.
 Commander-Larabee Corp., Minneapolis, Minn.
 Community Feed Stores, Inc., East Longmeadow, Mass.
 G. E. Conkey Co., Cleveland, Ohio.
 Consolidated Feed & Grain Co., Inc., 912-916 Chamber of Commerce, Buffalo, N. Y.
 Consolidated Rendering Co., Boston, Mass.
 Consumers Import Co., Inc., 115 Broad St., New York, N. Y.
 Copeland Flour Mills, Ltd., Midland, Ont., Canada.
 Corn Products Refining Co., 17 Battery Place, New York, N. Y.
 Nicolas Courcy, 11 Waverly St., Taunton, Mass.
 Cover & Palm Co., 150 Middle St., Lowell, Mass.
 E. A. Cowee Co., Fitchburg, Mass.
 Chas. M. Cox Co., Boston, Mass. (Registered for Lake-of-the-Woods Milling Co., Ltd., Sherwin-Williams Co. of Canada, Ltd., and Western Canada Flour Mills, Ltd.)
 Crosby Milling Co., Brattleboro, Vt.
 Curley Brothers, Wakefield, Mass.
 J. Cushing Co., Fitchburg, Mass.
 Cutler Co., North Wilbraham, Mass. (Registered by St. Albans Grain Co.)
 Dairymen's League Co-Operative Association, Inc., 11 West 42nd St., New York, N. Y.
 Decatur Milling Co., Inc., Decatur, Ill.
 Dehydrating Process Co., 60 Mt. Washington Ave., Boston, Mass.
 Delaware Mills, Inc., Deposit, N. Y.
 Denver Alfalfa Milling & Products Co., Lamar, Col.
 Dewey Bros. Co., Blanchester, Ohio.
 Frank Diauto, Randolph, Mass.
 F. Diehl & Son, Inc., Wellesley, Mass.
 Dietrich & Gambrill, Inc., Frederick, Md.
 Dixie Mills Co., East St. Louis, Ill.
 Donahue Stratton Co., 414 Mitchell Bldg., Milwaukee, Wis.
 John C. Dow Co., Inc., 200 Broadway, Cambridge, Mass.
 Dreyer Commission Co., 300 Merchants Exchange Bldg., St. Louis, Mo.
 Dry Milk Co., Inc., 205 East 42nd St., New York, N. Y.
 Duluth-Superior Milling Co., Duluth, Minn.
 Eagle Roller Mill Co., New Ulm, Minn.
 East Bridgewater Farmers Cooperative Exchange, Inc., East Bridgewater, Mass.
 Eastern Grain Co., Bridgewater, Mass.
 Eastern States Farmers' Exchange, Springfield, Mass.
 B. A. Eckhart Milling Co., 1300 Carroll Ave., Chicago, Ill.
 Eddy Milling & Drying Co., Pennsuco, Fla.
 Michael W. Ellis, 19 Walnut St., Peabody, Mass.
 Elm City Creamery, Inc., 3 Pleasant St., Fairhaven, Mass.
 Elmore Milling Co., Inc., Oneonta, N. Y.
 John W. Eshelman & Sons, Lancaster, Penn.
 Evans Milling Co., Indianapolis, Ind.
 Everett, Aughenbaugh & Co., Minneapolis, Minn.

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1932 by 106 firms, covering 537 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	329
Ammoniated superphosphates	1
Superphosphates with potash	3
Dry ground fish, tankage and ground bone	58
Fertilizer simples, including organic nitrogen compounds	105
Tobacco stems	2
Pulverized manures	23
Cotton hull ashes and wood ashes	4
Peat products	10
Stone meal	2
Total	537

Representative samples of the following brands were not drawn as they were not found on display by our sampling agents.

¹Assisted by H. Robert DeRose, Albert F. Spelman, J. W. Kuzmeski, Ralph F. Nickerson, Chemists; James T. Howard, C. L. Whiting, A. G. Brigham, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

Brands of Fertilizer Registered but Not Sampled.

MANUFACTURER AND BRAND.	GRADE.	MANUFACTURER AND BRAND.	GRADE.
American Agricultural Chemical Co.		Old Deerfield Fertilizer Co., Inc.	
A A Country Club Fertilizer	8-6-4	Old Deerfield 4-8-10, High Potash	4-8-10
Breck's Market Garden Manure	4-8-7		
Blood Tankage	9.87-5.49-0	Pawtucket Rendering Co.	
Ground Tankage	7.40-9.15-0	Special Burnley Mixture	4.10-8-7

Sulphate of Ammonia	20-0-0		
Miller Fertilizer Co.			
Miller's Superphosphate	0-16-0		

Drawing of Samples.

Between April 1 and June 15, four sampling agents working independently made a thorough canvass of the state by means of automobile. Counties assigned to each agent were as follows: James T. Howard, Hampshire, Hampden, Franklin and Berkshire; A. G. Brigham, Worcester; G. E. Taylor,

Norfolk, Bristol, Plymouth, Barnstable and Dukes; C. L. Whiting, Essex, Middlesex and Suffolk.

Sampling statistics for the year are as follows: 22,895 sacks were sampled, representing 7,718 tons of fertilizer, thus about one ton to every eight that was sold in the state was sampled; 196 towns were visited; 1,956 samples, representing 489 distinct brands, were drawn from stock in the possession of 610 agents or owners; 209 other agents were called upon, but no samples were taken for the following reasons—agency discontinued, stocks all sold out, stocks included only those brands of which a sufficient number of samples had already been drawn in that territory.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS.

The following table gives average quotations taken from the Oil, Paint and Drug Reporter and Chemical Markets.

Wholesale Quotations on Chemicals and Unmixed Materials.

NATURE OF MATERIAL.	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1.		Price Per Ton Sept. 26, 1932.	Difference Between Sept. 26 Price and Six Months' Average: Sept. 1, 1931—Mar. 1, 1932.
	1931.	1932.		
Ammonium sulfate (20.5% N), 200 lb. bags, northern ports	\$37.95	\$25.41	\$22.00	-\$3.41
Ammonium sulfate-nitrate (26% N), bags, northern ports	48.57	34.80	No price	-
Nitrate of soda (15.5% N), bags, natural or synthetic, ex vessel	40.54	36.58	24.40	-12.18
Nitrate of lime (15% N), bags, northern ports, ex vessel	41.04	36.24	34.00	-2.24
Nitrate of potash (13% N, 45% K ₂ O), bags, c.i.f. ports	-	56.79	56.50	-.29
Urea (46% N), car lots, bags, c.i.f. northern ports	104.08	82.60	82.60	none
Dried blood (12.34% N) ground, bulk, New York	47.60	27.13	25.88	-1.25
Animal tankage (8.23% N, 6.86% P ₂ O ₅), bulk, New York	34.82	16.81	18.50	+1.69
Dry ground fish (9.02% N, 6.86% P ₂ O ₅), bags, Baltimore	59.42	43.06	30.00	-13.06
Cottonseed meal (5.76% N), bags, at mill	24.81	14.71	15.25	+ .54
Castor pomace (4.52% N), bags, f.o.b. works, car lots	-	-	12.00	-
Ground bone (2.47% N, 22.88% P ₂ O ₅), bags, f.o.b. Chicago	26.92	21.00	21.00	none
Superphosphate (16% avail. P ₂ O ₅), bulk, f.o.b. Baltimore	8.75	8.00	7.50	-.50
Muriate of potash (50.54% K ₂ O), bags	37.15	37.15	37.15	none
High grade sulfate of potash (48.65% K ₂ O), bags	48.25	48.25	47.50	-.75
Potash-magnesia sulfate (25.94% K ₂ O), bags	27.80	27.80	27.80	none

The mineral forms of nitrogen have continued to decline in cost during the past season, the outstanding feature being the great drop in price of nitrate of soda, which amounts to \$12.18 per ton, thus making the unit cost of nitrogen from this source more comparable to that of ammonium sulfate. Even so, the unit cost of nitrogen from the latter salt is still 50 cents under that for the nitrate salt.

Superphosphate has declined \$1.25 per ton from the average price for six months ending March 1, 1931, and 50 cents per ton from the average price for the same period for 1932.

Some of the organic ammoniates have declined still further in price from the low figures recorded in 1931, and more recent quotations indicate that a further decline in price is not unexpected. Dry ground fish has led in the price decline, being quoted Sept. 26 for \$13 under the average quotation for six months ending March 1, 1932, while dried blood has shown a further decline of \$1.25 for the same period. Animal tankage and cottonseed meal

have recently shown a small increase in cost, the former being quoted on Sept. 26 \$1.69 and the latter 54 cents higher per ton than for the six months ending March 1, 1932.

High grade sulfate of potash has shown a decline in price of 75 cents per ton, this being the only change recorded for this element.

From the above, it would seem that no material increase in the cost of mixed fertilizers for 1933 can be anticipated, and it is not unlikely that somewhat lower prices may prevail.

The following fertilizer trade values are based on average wholesale quotations taken from trade journals for six months ending March 1, 1932, to which 20 per cent has been added for overhead, proper allowance having also been made for bags, labor, and freight when appropriate.

Fertilizer Trade Values.

FORM OF PLANT FOOD.	Value per Pound.	Unit Value.
Nitrogen.		
In ammonia salts	\$0.075	\$1.50
In nitrates14	2.80
Organic nitrogen in fish285	5.70
Organic nitrogen in blood, meat and hoof meal135	2.70
Organic nitrogen in fine ¹ bone and tankage1375	2.75
Organic nitrogen in coarse ¹ bone and tankage and in pulverized manures0925	1.85
Organic nitrogen in mixed fertilizers145	2.90
Organic nitrogen in cottonseed meal, castor pomace, etc.175	3.50
Organic nitrogen in calurea and urea11	2.20
Organic nitrogen in cyanamid095	1.90
Phosphoric Acid.		
Soluble in water and neutral citrate of ammonia (available)04875	.975
In fine ¹ bone and tankage and in fish045	.90
In coarse ¹ bone and tankage04	.80
In pulverized manures, seed residues, and ashes04	.80
Insoluble in mixed fertilizers02	.40
Potash.		
As sulfate059	1.18
As muriate044	.88
As nitrate04	.80
As carbonate075	1.50
In pulverized manures, seed residues, and the water insoluble portion in ashes04	.80

¹Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1-50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

FERTILIZER TONNAGE.

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts.

	July 1, 1929, to July 1, 1930	July 1, 1930, to July 1, 1931.	July 1, 1931, to July 1, 1932.
Mixed fertilizers	42,881	43,463	39,689
Fertilizer chemicals and materials unmixed	21,249	19,174	20,325
Pulverized natural manures	2,491	2,426	1,939
Totals	66,621	65,063	61,953

There were 3,110 tons less fertilizer sold in the state in 1932 than during the previous year. The tonnage of mixed fertilizers was 3,774 less, while that of the fertilizer chemicals and unmixed materials was 1,151 more than in 1931. Pulverized manures showed a decrease of 487 tons.

Of the total tonnage sold, 64.1 per cent was mixed fertilizer, 32.8 per cent was unmixed materials, and 3.1 per cent was pulverized natural manures.

Plant Food Tonnage.

	Nitrogen.		Phosphoric Acid.		Potash.	
	1931.	1932.	1931.	1932.	1931.	1932.
Mixed fertilizers	1,916	1,957	3,473	3,386	2,827	2,725
Fertilizer chemicals and materials unmixed	1,084	1,350	1,630	1,476	561	534
Pulverized natural manures	42	40	30	27	87	53
Totals	3,042	3,347	5,133	4,889	3,475	3,312

There were only 102 tons less of plant food sold in the state than during 1931, although the actual tonnage of fertilizer sold was 3,110 less. Three hundred and five tons more of nitrogen, 244 tons less of available phosphoric acid, and 163 tons less of potash were used in the state than during the previous year.

There were 11,548 tons of plant food sold, of which 28.98 per cent was nitrogen, 42.34 per cent available phosphoric acid, and 28.68 per cent potash. Of the 11,548 tons of plant food sold, 69.86 per cent was furnished in mixed fertilizers, 29.10 per cent from chemicals and unmixed materials, and 1.04 per cent from pulverized manures.

The mixed fertilizers and unmixed materials, including the pulverized manures, furnished the three plant food elements in the following proportions: nitrogen, 58.47 per cent from mixed and 41.53 per cent from unmixed; phosphoric acid, 69.26 per cent from mixed and 30.74 per cent from unmixed; potash, 82.28 per cent from mixed and 17.72 per cent from unmixed fertilizers.

In the tabulation of the tonnage of mixed fertilizers the fertilizer grade is expressed in round numbers and in the order of nitrogen, available phosphoric acid, and potash. This represents the plant food guarantee of each fertilizer grade. In those few cases where fractional numbers are given, the tonnage accompanying the grade was sold during the six months ending January 1, 1932, before the ruling requiring whole numbers in expressing grade became effective. The tonnage tables show sales for one year, from July 1, 1931.

Of the 33,359 tons of complete fertilizer guaranteed to contain 14 per cent or more of available plant food, 77.4 per cent was furnished by 10 grades and 170 brands. Double and multiple strength grades totalled 1,004 tons and 22 brands — 203 tons less than during the previous year.

Of the mixed fertilizer sold, 96.75 per cent contained 14 per cent or over of available plant food, compared with 90.75 per cent in 1931. The tonnage of superphosphates with potash sold during the year was negligible, being only one-tenth of 1 per cent of the total tonnage of mixed goods.

There were 2,613 tons less of low-analysis (less than 14 per cent of available plant food) complete fertilizers sold than in 1931. The 5-3-5 grade, comprising 10 brands, furnished about 67 per cent of the tonnage of these low-analysis goods. About 92 per cent was furnished by 3 grades, comprising 12 brands.

The tonnage of unmixed materials was distributed as follows: nitrogen products, 47.61 per cent; phosphoric acid products, 18.99 per cent; potash products, 4.32 per cent; tankage, fish, bone, tobacco stems, wood ashes, and nitrate of potash, 20.01 per cent; and miscellaneous, 9.07 per cent.

Ten of the most popular grades are listed in the following table in the order of largest tonnage and in comparison with a similar list for 1931.

1931.		1932.	
GRADE.	Tonnage.	GRADE.	Tonnage.
4.11 (5)-8-7	11,921	5-8-7	9,806
3.29 (4)-8-4	8,267	4-8-4	7,337
3.29 (4)-6-10	1,936	4-8-7	4,475
2.47 (3)-8-4	1,633	4-8-10	1,791
4.11 (5)-3-5	1,614	3-10-4	1,428
5.76 (7)-3-7	1,461	7-6-6	1,286
6.58 (8)-6-6	1,018	4-10-5	1,271
4 (4.86)-12-4	1,010	3-8-4	972
4.11 (5)-10-5	963	4-12-4	908
4.94 (6)-3-6	896	5-3-5	862

The adoption of whole numbers in expressing fertilizer grade no doubt made it somewhat more difficult for many users to make their final selection in 1932, thus requiring greater effort on the part of the fertilizer salesman. This may be illustrated by a study of the 5-8-7 grade.

In 1931, 5-8-7 meant 5 per cent ammonia (4.11 per cent nitrogen), 8 per cent available phosphoric acid, and 7 per cent potash; while in 1932, it meant 5 per cent nitrogen, 8 per cent available phosphoric acid, and 7 per cent potash. The tonnage of 5-8-7 was 2,115 less in 1932 than in 1931, many users selecting the 4-8-7 grade, which is more nearly like the 5-8-7 grade of 1931 in analysis, and of which 4,475 tons were sold. However, the tonnage of 5-8-7 sold in 1932 would indicate that many users are convinced that the higher percentage of nitrogen (.89%) is good economy. The combined tonnage of 5-8-7 and 4-8-7 for 1932 was 14,281 which was 2,360 tons more than the tonnage of 5-8-7 in 1931.

Similarly, while the 1932 tonnage of the 4-8-4 grade was less than the tonnage of this grade in 1931, the combined tonnage of 4-8-4 and 3-8-4 in 1932 was 42 tons greater than that of the 4-8-4 grade in the previous year.

It would seem to the writer that with continued low cost of nitrogen, the tonnage of the higher nitrogen grade in each case will gradually increase. It is doubtful economy to maintain indefinitely two fertilizer grades, the limit of variation of which is only 1 per cent of nitrogen when this difference is not measurable or justifiable in terms of crop response.

The 3.29 (4)-6-10 grade, which had the third largest tonnage in 1931, has been replaced by the 4-8-10, which had the fourth largest tonnage in 1932. The 2.47 (3)-8-4 grade, with the fourth largest tonnage in 1931, has been largely replaced by the 3-10-4, which had the fifth largest tonnage in 1932. The 4-10-5 grade, which in 1931 was expressed 4.11 (5)-10-5, was advanced from the ninth to the seventh place in the tonnage sold. The 7-6-6 grade, which in 1931 was expressed 6.58 (8)-6-6, advanced from the seventh to the sixth place, with a tonnage increase of 268. The 5-3-5 grade, 4.11 (5)-3-5 the previous year, occupies the tenth place in 1932, with a tonnage decrease from the previous year of 752. Two other grades of tobacco fertilizer, 5.76 (7)-3-7 and 4.94 (6)-3-6, which occupied sixth and tenth place in the tonnage sold in 1931, now occupy the fourth-ninth and eleventh place, respectively.

“New England Standard Nine” Grades.

No changes have been made in this list since those recorded in 1931. The tonnage accompanying each grade in the following table shows to what extent the farmers have followed the recommendations of the agronomists, manufacturers and chemists with reference to the selection of fertilizers for the needs of crops grown in New England.

NEW ENGLAND STANDARD NINE GRADES.	Tonnage.	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods.	Total.
5-8-7	9,806 ^a	5,376	15,182
4-8-4	7,337 ^b	1,268	8,605
4-8-10	1,791	914	2,705
7-6-6	1,286 ^c	137	1,423
6-3-6	847 ^d	1,342	2,189
3-10-4	1,428	1,283	2,711
2-12-4	191	-	191
5-8-10	889 ^e	1,791	2,680
2-8-10	136 ^f	-	136
	23,711	12,111	35,822

a Including 8 tons of 10-16-14.

b Including 137 tons of 15-30-15.

c Including 17 tons of 14-12-12.

d Including 11 tons of 10-5-10.

e Including 98 tons of 10-16-20.

f Including 10 tons of 4-16-20.

Of the total tonnage of mixed fertilizers, 59.75 per cent was from grades recommended for New England conditions, and an additional 30.5 per cent was from grades varying but one per cent in one or more plant food elements from the grades advocated: over 90 per cent, therefore, of the total tonnage conformed to the group recommended, or varied from it by one per cent in one or more elements. Of the ten grades, including the multiple strength mixtures, that have the highest tonnage (30,136 tons), only five, totalling 21,648 tons, were among the New England Standard Nine.

About 22 per cent of the total tonnage of mixed fertilizers was from six grades not among the number known as the New England Standard Nine. They are 4-8-7, third largest tonnage sold; 4-10-5, sixth largest; 3-8-4, eighth largest; 4-12-4, ninth largest; 5-3-5, tenth largest; 4-8-8, twelfth largest.

a Several analyses of the same brand have been averaged and recorded in the table as one analysis.

Summary of Deficiencies in Mixed Fertilizers

	1930.	1931.	1932.
Brands deficient in one element	94	99	59
Brands deficient in two elements	14	15	9
Brands deficient in three elements	1	0	0
Brands deficient in nitrogen	38	23	18
Brands deficient in available phosphoric acid	46	57	27
Brands deficient in potash	41	49	32

Serious Commercial Shortages in Mixed Fertilizers

AMOUNT OF SHORTAGE PER TON.	NUMBER OF BRANDS ACCORDING TO YEARS.			
	1929.	1930.	1931.	1932.
More than \$5	3	1	2	none
Between \$4 and \$5	1	1	none	none
Between \$3 and \$4	1	1	1	2
Between \$2 and \$3	2	none	none	none
Between \$1 and \$2	6	1	3	2

Of the 303 brands analyzed, 235, or 77.5 per cent, showed no deficiencies. Out of 906 plant food guarantees made, 92 per cent were fully maintained. The deficiency table shows the following statistics:

- Deficiencies not exceeding $\frac{1}{4}$ of 1 per cent, 40.
- Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of 1 per cent, 20.
- Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of 1 per cent, 8.
- Deficiencies more than $\frac{3}{4}$ of 1 per cent, 9.

Of the total number of guarantees of each element made, 6 per cent of the nitrogen, 8.9 per cent of the available phosphoric acid, and 10.6 per cent of the potash were not met. Ten of the 18 nitrogen deficiencies, 9 of the 27 available phosphoric acid deficiencies, and 21 of the 32 potash deficiencies, did not exceed $\frac{1}{4}$ of 1 per cent.

There were 5 less shortages in nitrogen, 30 less in available phosphoric acid, and 17 less in potash, than in 1931.

Each of 20 different firms registered five or more brands of mixed fertilizer. The mixing efficiency table lists these manufacturers and shows to what extent provision was made to guard against accidental deficiencies in plant food due to the variation in composition of the unmixed materials or to other details of the process that may not always be absolutely uniform. These data were based upon tonnage as well as composition of the different brands of each manufacturer. It is gratifying to note that all of the twenty firms listed showed an overrun in all three plant food elements. It will be noted, however, that two firms showed an overrun of less than one-tenth of 1 per cent in nitrogen, and four other firms showed an overrun of less than one-tenth of 1 per cent in potash, an amount which is usually considered too small to safely care for accidental variations in the composition of the crude stock materials which go into the mixtures. In available phosphoric acid the overruns were more liberal and were sufficiently high to be safe in all instances.

Adoption of Simplified Guarantees on Mixed Fertilizers.

The past year has marked the adoption of a new and simplified method of expressing the plant food guarantees on mixed fertilizers. In all mixed fertilizers the grade has been made a part of the brand or trade name, and has been expressed in terms and order of nitrogen, available phosphoric acid, and water soluble potash. This has been accompanied in all cases by a formal statement of the minimum guarantee only of these three plant food elements. Exceptions to this rule are but few, and are confined to bone-base mixtures where all of the phosphoric acid is derived from unacidulated bone. In these cases, the total as well as the available or citrate soluble phosphoric acid has been stated. Chemicals, unmixed fertilizer materials, and pulverized animal manures have not been included in this change, and may be guaranteed in fractional percentages as in the past.

It should be very encouraging to the individual manufacturers, as it is to the control officials, that there exists the splendid spirit of cooperation necessary to institute so readily the improvement in grades only recently recommended. That the user will welcome the change can be reasonably anticipated.

Explanation of Tables of Analyses.

Guarantee. This column gives the manufacturer's claim or guarantee for the three elements of plant food, nitrogen, available phosphoric acid and potash, in the order stated. The grade of each fertilizer is made a part of the trade name and is expressed as nitrogen, available phosphoric acid and water soluble potash, and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1932, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

Mixtures Substantially Complying with Guarantees.

Number of Samples.	NAME OF MANUFACTURER AND BRAND.	Guarantee: Nitrogen—Available Phosphoric Acid—Potash.	NITROGEN FOUND.				Available Phosphoric Acid Found.	POTASH (K ₂ O) FOUND.

Poultry manure and peat (h) . . .	6	1	2.91	2.64	-	1.25 _b	79.14	8.49	-
Sheep manure and wool waste (h) . . .	5	2	2.25	.53	-	5.12 _b	17.88	8.68	-

a Average chlorine, 1.71%.

b Total potash.

c Average magnesium oxide, 9.21%.

d Average calcium oxide, 12.62%; magnesium oxide, 5.13%; chlorine, 1.35%; water, 7.35%, insoluble matter, 11.68%.

e Average tankage finer than 1-50 inch diameter, 44.63%; coarser than 1-50 inch, 55.37%

f Average bone finer than 1-50 inch diameter, 69.35%; coarser than 1-50 inch, 30.65%.

g Average calcium oxide, 31.83%; magnesium oxide, 3.59%; insoluble matter, 14.40%; water, 15.16%.

h Average organic matter: sheep manure, 45.26%; sheep and goat manure, 37.63%; goat manure, 35.07%; cattle manure, 78.18%; poultry manure, 69.38%; poultry manure and peat, 67.18%; sheep manure and wool waste, 47.75%.

Nitrogen Compounds.

The chemicals and unmixed materials under this heading are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element: the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton follow the appropriate table, but are listed by themselves, serious deficiencies therein being emphasized by boldface type.

Warning. Dealers and distributors of cottonseed meal sold as a fertilizer in Massachusetts should, before making contracts or purchases for resale, make inquiry at the fertilizer control laboratory as to whether or not the southern shipper has complied with the Massachusetts fertilizer law by registration of his brands. Registration and tonnage fees, if not paid by the shipper, must be collected from the local distributor.

BRANDS SHOWING A COMMERCIAL SHORTAGE OF \$1 OR MORE PER TON.

Associated Chemical Co.	1d	6.88	7.00	5.68	4.50	54.41	45.59
Standard Wholesale Phosphate & Acid Works, Inc.	1e	6.70	7.00	3.57	7.15	33.24	66.76

(a) Fat 9.92%, (b) fat 14.25%, (c) fat 12.63%. Apparently these samples were meat scraps diverted from feeding channels.

d The product analyzed 4.53% available phosphoric acid, of which .77% was soluble in water, indicating the presence of superphosphate. It also analyzed 1.54% ammoniacal nitrogen and 4.94% SO₃, which indicates that ammonium sulfate was added at the rate of 150 pounds per ton. Microscopical examination revealed the presence of fragments of coconut shells, watermelon, apple, tomato and cucumber seeds, apple skins, bran coats from wheat, and glass, indicating that the product was a mixture of garbage tankage, animal tankage, ammonium sulfate and superphosphate. There was 1.94% of potassium oxide present, which evidently originated in the organic vegetable matter in the garbage tankage. The product showed a commercial shortage of \$3.00 per ton, and a rebate of \$4.30 per ton was promptly paid by the manufacturer. Only one-half ton of the product was sold in the state. The manufacturer was advised that such a mixture could not legally be sold in Massachusetts as animal tankage.

e There was a commercial shortage of \$3.64 per ton. Only three sacks were sold, and this apparently was stock carried over from the previous season. Both chemical and microscopical examination indicated that the product was a mixture of animal tankage and processed tankage. The manufacturer was advised that such a product, although of fairly good quality, should not be sold as animal tankage but as a mixture of animal and processed tankage.

Note: Dealers and consumers of this product are urged to purchase only from those importers or dealers who have duly registered their material in Massachusetts. Sales of unregistered goods in Massachusetts are illegal and subject to fine. Failure of registration on the part of any importer throws this responsibility upon the local agent, who must arrange to assume both the cost of registration and the tonnage fees provided by the state fertilizer law.

		Soluble in Dilute Hydrochloric Acid.	By Fusion Method.		Soluble in Dilute Hydrochloric Acid.	By Fusion Method.
Potassium oxide . . .	3.33	1.25	2.75	3.00	.06	.95
Calcium oxide . . .	3.48	1.81	2.34	.56	2.31	4.09
Magnesium oxide . . .	6.48	1.72	2.30	2.00	2.55	3.59
Phosphoric acid13	.19	.19	.25	.08	.08

No water soluble potash was found or guaranteed in either product.

Based on the above analyses, the commercial plant food value in one ton of McCrillis Stone Meal would be 69 cents; of Menderth, \$1.57. The former was selling for \$30.00 per ton: the latter was quoted in 5-lb. carton, 50 cents; 100-lb. bags, \$3.50; and in 500-lb. lots, \$12.50; larger amounts quoted upon request. The two products do not possess any economic agricultural value and it is inconceivable that anyone after noting their composition could be induced to purchase the products either as a source of plant food or as an insect repellent.

DECEMBER, 1932

Inspection of Agricultural
Lime Products

By H. D. Haskins

This is the twenty-first report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold, supplemented by comparative costs of units of effective oxides present. Supplementary definitions and interpretations are given for lime products used in agriculture.

Massachusetts State College
Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1932.

By H. D. Haskins, Official Chemist.¹

Manufacturers and Brands.

During 1932, twenty-two firms registered for sale in Massachusetts thirty-six brands of agricultural lime and two of gypsum or land plaster. The products are grouped as follows:

Hydrated or slaked lime	17
Ground limestone	17
Lime kiln ashes	1
Oyster shell lime	1
	<hr/>
	36
Gypsum	2

With the exception of two brands of hydrated lime registered by the Eastern States Farmers' Exchange, and one of lime kiln ashes registered by H. D. Brewer, all of the brands registered were sampled and analyzed. The samples were drawn largely during the spring months from every section of the state by the same sampling agents who drew the fertilizer samples for the inspection of that commodity. A total of 71 samples was drawn from stock found in the possession of 65 agents or owners.

Variations and Deficiencies in the Composition of Lime Products.

In the hydrated lime products, Table I, only one serious deficiency was noted. The Allyndale Burned Lime, manufactured by Allyn and Allyn, East Canaan, Ct., showed a deficiency of 10.6 per cent of calcium oxide and 2.55 per cent of magnesium oxide. Four other brands showed small deficiencies either in magnesium or calcium, but these were more than made up by overruns in the other ingredient, so that no commercial shortage was noted.

In Table II, Fine Ground Limestone, only two small deficiencies were noted and both were found on the same brand put out by Hazen Brothers.

The efficiency of some of the brands in this group could be materially improved by finer grinding. Between 70 and 80 per cent passing through a 100-mesh sieve shows a satisfactory degree of fineness, and it should be the endeavor of all producers to achieve this tentative standard.

No deficiencies were found in the gypsum products.

Purchase of Lime Products

The principal factors which determine the most economical purchase of lime are: composition of product, effective oxides (calcium oxide equivalent) in one ton of lime, cost of lime at plant, freight charges to destination, hauling cost from R. R. station to farm, and, in case of limestone, the mechanical fineness. As regards the choice between hydrated lime and fine ground limestone, if the limestone is ground so that 100 per cent will pass an 80-mesh sieve and is used in amounts to furnish the same quantity of calcium oxide equivalent as the hydrated product, it will usually be found to be quite as effective.

¹Assisted by H. Robert DeRose, Albert F. Spelman, J. W. Kuzmeski, Chemists; James T. Howard, C. L. Whiting, A. G. Brigham and G. E. Taylor, Sampling Agents; Harry L. Allen Laboratory Assistant.

Oftentimes personal preference determines the selection of the form of lime to be purchased. When the haul from the depot to the farm is a long one, the unit cost of calcium oxide equivalent would be more favorable for the hydrated lime, and the same may be said with reference to its distribution in the field. On the other hand, the ground limestone may be applied in the field with much less discomfort.

It is usually good practice to buy collectively; that is, by several farmers ordering together, thus securing the advantage of much cheaper freight by car lot shipments. When located sufficiently near a lime plant to permit economical truck delivery, oftentimes a considerable saving can be made by this system of shipment. If shipment by rail is deemed more economical, it is usually desirable to write to several firms asking for quotations on 20- or 25-ton car lots delivered at the consumer's R. R. station. An example follows where it is assumed that two groups of farmers, one located in Whately and the other in Leominster, are in the market for a 25-ton car of lime and want to know whether fine ground limestone or hydrated lime is the more economical product to buy. The Whately group wants the high magnesium product, while the Leominster group prefers the high calcium product. They secure quotations f. o. b. at destination, and by reference to the lime bulletin obtain data as to the composition of each product. The table which follows illustrates the mode of calculating and assembling the data from which a choice of lime product may be intelligently and economically made.

	HIGH MAGNESIUM LIME WHATELY				HIGH CALCIUM LIME LEOMINSTER			
	GROUND LIMESTONE		HYDRATED LIME		GROUND LIMESTONE		HYDRATED LIME	
	A	B	C	D	E	F	G	H
Calcium oxide, per cent	30.81	30.60	46.50	44.73	51.70	53.90	62.23	65.97
Magnesium oxide, per cent	21.08	20.50	33.26	30.06	2.10	.91	.58	.65
Calcium oxide equivalent: ¹ Per cent	60.11	59.10	92.73	86.51	54.62	55.17	63.04	66.87
Pounds in one ton	1,202	1,182	1,855	1,730	1,092	1,103	1,261	1,337
Ton quotation, plus 50 cents for cartage to farm	\$6.06	\$6.56	\$11.30	\$10.30	\$7.50	\$6.31	\$10.50	\$10.40
Cost of 100 pounds of calcium oxide equivalent	\$0.50	\$0.55	\$0.61	\$0.60	\$0.69	\$0.57	\$0.83	\$0.78

¹Magnesium oxide x 1.39 + calcium oxide.

NOTE: The ton cost of the product delivered at the farm, divided by the pounds of calcium oxide equivalent in one ton, and multiplied by 100, gives the cost of 100 pounds of calcium oxide equivalent.

Lime Definitions and Interpretations.

The following definition and interpretation of lime products used in agriculture were adopted as official by the Association of Official Agricultural Chemists at their meeting in November, 1932.

Net Weights. The weights appearing on packages of fertilizer, agricultural lime and liming material shall always mean net weights.

Agricultural Liming Materials are any substances that contain calcium and magnesium in condition and quantity suitable for use in neutralizing soil acidity.

Explanation of Tables of Analyses.

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO_2). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked) or as burned lime (caustic or unslaked). It should be understood that all of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

"Calcium oxide equivalent" represents the acid neutralizing value of both the magnesium and calcium, expressed in terms of calcium oxide. The figures in the "per cent" column are obtained by multiplying the magnesium oxide by the factor 1.39 and adding the calcium oxide; or they may be obtained by a direct titration with standard acid. All samples are checked by both methods in this laboratory. The "pounds in one ton" are secured by multiplying the figures in the "per cent" column by 20. The "cost of 100 pounds" is based on prices furnished by the producers.

Table II, "Calcium oxide equivalent: pounds in one ton." In securing these data the degree of fineness to which the limestone has been ground is taken into consideration. On those products which are finely ground so that all of the material will pass through a 20-mesh sieve, it is assumed that all of the calcium and magnesium oxides will become available in the soil within a five-year period. On those products which will not wholly pass a 20-mesh sieve, it is assumed that the oxides in that portion which is coarser than 20-mesh will be only 50 per cent effective during the same period.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

In both tables the figures in parenthesis following the brand name show the number of samples collected and analyzed.

NOTE: The small amount of calcium and magnesium carbonates present in gypsum would, to a slight extent, neutralize sour soils: the calcium sulfate would not be effective for this purpose.

MASSACHUSETTS AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN No. 67

FEBRUARY, 1933

Seed Inspection

By F. A. McLaughlin and Margaret E. Nagle

This Report, the fifth in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1932 by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274).

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

FOREWORD

The seed law in Massachusetts, which has been in operation for five years, is enforced by the State Department of Agriculture. It has been the policy to acquaint seed dealers with the provisions of the law, which has a two-fold purpose.

1. The true labeling of seeds will enable purchasers to know what they are buying.
2. A uniform compliance with the provisions of the seed law relating to the testing, analyzing, and sale of agricultural seeds should do away with much unfair competition among seed dealers.

For the most part, satisfactory cooperation has been received from dealers handling agricultural seeds in this State, and it is felt that the operation of the seed law has been instrumental in bringing about a more healthy condition regarding the sale of quality seeds in Massachusetts. It is the policy of the Department of Agriculture to give special attention to those dealers and distributors who have not shown any indication of cooperating, and to use the police power of the Department if necessary to bring about a full compliance with the provisions of the Massachusetts seed law. Hearings will be held in cases where the tests and analyses made by the Seed Laboratory in Amherst show that the label being used by the seed dealer indicates a much higher quality of seed than the official tests. Further regulatory action will be taken in cases where methods now being used to obtain a substantial compliance with the seed law fail to bring about the desired results.

SEED INSPECTION

By F. A. McLaughlin and Margaret E. Nagle¹

This bulletin contains the results of the inspection of agricultural seeds from October 1, 1931 to October 1, 1932. The Seed Laboratory analyzed 1,516 samples of seed, 463 of which are termed official samples and were collected by inspectors of the State Department of Agriculture in 59 towns of the State, 36 of which had not been included in previous inspections. Of the remaining samples, 304 came from dealers and farmers; 194 were received from the Rhode Island Department of Agriculture; 354 were purchased from wholesalers for field tests; and 201, ingredients of lawn seed, were germinated to determine viability of such seed in mixtures.

Field tests to determine trueness to type were again conducted in cooperation with the Department of Agronomy which tested 11 samples of alfalfa, 23 samples of red clover, and 3 samples of sweet clover; and the Department of Vegetable Gardening which tested 339 samples of sweet corn and 115 samples of peas.

Summary of Results

In the following tables which record laboratory analyses of official samples of seed together with copies of the label under which the seeds were sold, it will be observed that the most common violation is the lack of certain information required by law.

Alfalfa to Vetch

In the first table, including seeds from Alfalfa to Vetch, the analyses of 161 samples are recorded. Only 44 of these were wholly and correctly labeled. In other words, only 27 per cent of the seed in this group of samples was legally offered for sale. Of the remaining 117 samples, 95 failed to state the percentage of purity, percentage by weight of weed seed, percentage of germination, date of germination, or all four.

In 47 samples the purity was found less than the tolerance allowance, germination less than tolerance allowance, or the weed seed greater than tolerance allowance. Three samples of South German Mixed Bent were sold under the name of Creeping Bent, an old trade name which is no longer allowable because it is misleading, implying that the seed thus named is pure creeping bent. Sample A-82, which was labeled Spring Barley, was found to be Rye.

In most instances the absence of information on the sales label of seed was found to be due to carelessness on the part of the retailer who had destroyed or lost the tag attached by the wholesaler. For the most part, the wholesaler should be absolved from blame in this particular.

Mixtures of Not More Than Two Sorts of Seed

No samples declared as such were taken by inspectors. Three samples declared under the previous section as single seed were, however, found to be mixtures as defined by law. Analysis showed them not only illegally declared in this respect, but otherwise deficient.

Special Mixtures

The laboratory analyzed 41 samples of lawn and pasture mixtures. The tables show that only 15 of these were legally offered for sale. Of the remaining 26 samples, 8 failed to name ingredients at all and 6 failed to designate the variety, as for instance "Ryegrass" for "Domestic Ryegrass." Samples C-18 and C-23 were found to be entirely different mixtures than indicated. Correspondence with the wholesaler in each instance indicates that the retailer mixed his labels. C-40 failed to declare noxious weeds. Only 5 samples were found to have excessive weed seed, and 8 excessive inert material. In this

¹ Miss Jessie L. Anderson served as seed analyst for a period of three months.

group, as with the previous two, violations were largely the product of carelessness in not retaining the wholesaler's tag or imperfectly copying it.

Although the law does not require a stated germination for each of the kinds of seeds in a mixture of more than two ingredients, the laboratory tested each mixture for germination of each agricultural seed contained. The tables do not show this record. As a whole the performance was satisfactory. Low germination was mostly confined to seed like Chewings New Zealand Fescue which loses a great part of its viability in a few months' time. Low germination of all the ingredients in a given sample occurred infrequently, indicating that the mixture was not made during the current year

Vegetable Seed

All of the 258 samples of seed in this group were found to be sold in compliance with the law which requires that the kind and variety of the seed be stated with the name and address of the vendor. Seeds from each sample were germinated and the records included here indicate that 122 samples showed germination below the standards required by law in several of the states. A table averaging the standards of several states is shown on page 4, Control Series Bulletin No. 56, 1930. If the quality of vegetable seed sold in Massachusetts can be measured by the germination records, there is clearly a need of revision in the Vegetable Seed Law.

Explanation of Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Vetch, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F," what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, or excessive inert material, depending upon the column in which it is found.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance," the sample is considered as made up of two component parts: (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus twenty per cent (20%) of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination (%)</i>	<i>Allowable Variation (%)</i>
90 or over.....	6
80 or over, but less than 90.....	7
70 or over, but less than 80.....	8
60 or over, but less than 70.....	9
Less than 60.....	10

Type and Variety Studies of Sweet Corn

Conducted in Conjunction with the Department of Vegetable Gardening
Prof. Grant B. Snyder

The field trials of sweet corn for 1932 included 69 varieties from 29 sources, or 211 lots. The seed was purchased in all cases from the seed firm or grower. In conducting the trials every effort was made to maintain uniform cultural conditions and fair evaluation of plant and ear characters.

Detailed records were taken of each lot as to maturity, yield, and plant, ear and kernel characters. Sugar readings were also taken of each lot during the maturity period. These records are available to anyone interested but they will not be presented in this report except in those cases where the lot was variable to a degree sufficient to influence its commercial value for the name under which it was sold.

In general the sorts included were fairly true in type for the variety designated by the seedsman. In the older, standard varieties, very few variations were noted in the various strains of a given sort. There was, however, considerable variation in strains of the more recently introduced varieties in season of maturity and plant characters. The lots which showed decided variation in one or more factors are listed below.

Golden Gem, Farmers Seed Co.: 40 per cent of plants tall and late in maturity.

Golden Gem, S. D. Woodruff: lot was Spanish Gold and not Golden Gem.

Spanish Gold, F. H. Woodruff: lot variable in growth and maturity.

Spanish Gold, Alex. Forbes Seed Co.: 5 per cent of plants tall and late, off type.

Earliest Yellow, W. Schell Seed Co.: two distinct types in lot, one tall and late, the other short and early.

Early Yellow Sensation and Extra Early Yellow, F. H. Woodruff: practically identical in maturity and in plant, ear and kernel characters.

Extra Early Golden, Comstock, Ferre Co.: two distinct types in lot.

Early Surprise, Hart Seed Co.: 50 per cent of lot later and taller than typical for Early Surprise.

Early Crosby, Ross Seed Co.: 5 per cent of plants decidedly off type.

Early Mayflower, Ross Seed Co.: 5 per cent of plants dwarf with 8-rowed ears.

In certain varieties considerable variation in number of rows of kernels per ear was noted as the only variable factor. Especially was this true of Golden Bantam where many strains ran from 10 to 12 and even 14 rows.

Laboratory and Field Germination Tests of Sweet Corn

Seed Laboratory, Depts. of Vegetable Gardening and Botany Cooperating

Laboratory and field germination tests were made from the seed of each sample of sweet corn used for variety studies. Lots of two hundred seed were used both in laboratory and in field, not only to arrive at final figures but to record the presence of seed-borne organisms on the seed as received and the seedlings under laboratory test, also their relative importance upon field sown seed and resultant crop. Dr. O. C. Boyd of the Department of Botany identified and cultured organisms from both laboratory and field sown seed. Records of this work are on file at the Seed Laboratory which plans to continue the study for two more years before drawing conclusions and publishing results.

Laboratory and Field Germination Tests of Garden Peas

Seed Laboratory, Depts. of Vegetable Gardening and Botany Cooperating

The pea germination trials as conducted in 1931 were repeated this year for the purpose of making further observations on seed viability and seed-borne diseases, using the same series of seed samples. Although a second planting was not made in the field, in addition to the field germination test, for the purpose of taking yield records, the plants in the germination plot were allowed to grow to maturity in order that observations might be made on the occurrence of seed-borne diseases. One hundred and twelve lots of seed were used, with one hundred seeds in each sample.

While there is little to be added to or changed in the summary remarks for the 1931 report, yet it might well be stressed that the following factors appear to have a definite bearing upon the germinating properties of pea seeds in the laboratory and upon the stand and vigor of plants in the field.

1. Presence of entirely dead or non-viable seeds, due at least in part to immature seeds, severely injured or broken seeds, and failure of the intake pore to open for water absorption.
2. Weak, incomplete, or abnormal germination, resulting in either non-emergence in the field, or weak, unproductive plants, due primarily to low vitality or to injured seed coat, cotyledons or embryo.
3. Heavy contamination of seed by common molds, which are able not only to cause decay of cotyledons during germination, but also to infect the seedling in the field at the first node and at root injuries.
4. Seed contamination or infection by field disease organisms, each of which may cause one or more of the following conditions: Decay of seed before germination; death of seedling due to root or stem rot before or shortly after emergence; stunting and weakening of the plant throughout the season due to root infection, resulting in low or no yields; wilting and subsequent death of the plant any time after early blossom, due to vascular infection of root and stem, resulting in reduction of stand, vigor of plants, and yield.

It has been found advisable to discontinue field experiments because of soil conditions not adapted to satisfactory culture of this crop.

Type and Variety Tests of Legumes

Conducted in Conjunction with the Department of Agronomy
Prof. M. H. Cubbon

Plantings in twelve foot rows were made August 7, 1931, the entire area having previously received a broadcast application of nitrophoska. Growth was exceptionally good. Observations were made at three stages of growth during the 1932 season, results of these being shown below.

SWEET CLOVER

A-62	No description	White biennial Sweet Clover
B-7	White biennial sweet clover	White biennial Sweet Clover
B-143	White biennial sweet clover	White biennial Sweet Clover

These results are of interest because of the apparent tendency of the seed trade to supply the variegated types of alfalfa, which are best suited to Massachusetts conditions. Also, it should be remembered that Mammoth Red Clover matures somewhat later than Medium Red Clover, and probably gives a larger first cutting, but produces practically no second crop. There are evidently no samples of seed in the above lots that are willfully mislabeled.

MASSACHUSETTS
AGRICULTURAL EXPERIMENT STATION

Control Series

Bulletin No. 68

August, 1933

**Thirteenth Annual Report on
Eradication of Pullorum Disease
in Massachusetts**

By the Poultry Disease Control Laboratory

The results of testing for pullorum disease during the season of 1932-33 are reported in this bulletin. The consequences of failure to observe certain fundamental disease eradication principles have been pointed out to flock owners, and emphasis given to the measures necessary for the establishment and maintenance of pullorum disease-free flocks.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

THIRTEENTH ANNUAL REPORT ON ERADICATION OF PULLORUM DISEASE IN MASSACHUSETTS

1932—33

By The Poultry Disease Control Laboratory¹

Introduction

The testing data for the 1932-33 season show a marked decrease in the volume of work. Service was rendered to 338 flock owners, for whom 301,000 samples were tested. These figures show a decrease of 124 flocks and 120,895 samples from the previous season. Thirty-six flock owners cancelled their applications before the close of the season.

Necropsy service was given to 40 poultrymen whose flocks contained doubtful reacting birds. This service is regarded as a very helpful diagnostic aid in determining the status of a flock. Unfortunately, some poultrymen do not appreciate this fact because they fail to submit the requested birds to the laboratory. In such cases the flock is classified in this report as infected.

The number of samples from fowl other than chickens was less than during the previous season. While such fowl may not appear to be very susceptible to pullorum disease, yet it is reported from time to time that various species are infected with this disease. In order to determine the possible role that fowl other than chickens play in the establishment and maintenance of pullorum disease-free flocks, all poultrymen who maintain such birds are asked to cooperate with this laboratory in having them tested.

As in past years, the percentage of reactors was less among males than females. A total of 274,097 females was tested which revealed 1,342 (0.49 per cent) reactors; and 26,617 males which showed 78 (0.29 per cent) reactors.

A summary of the service rendered during the past year follows:

Applications received.....	374
Applications cancelled.....	36
Flocks tested.....	338*
Tests made.....	301,000
Chickens:—	
Routine.....	300,065
Experimental.....	649
Fowl other than chickens:—	
Routine.....	56
Experimental.....	230
Owners receiving necropsy service.....	40
Necropsies of reacting birds.....	70

*Includes three flocks of poultry other than chickens.

¹Poultry Disease Control Laboratory Staff: — H. Van Roekel, Chief of Laboratory; K. L. Bullis and D. M. Yegian, Assistant Veterinary Pathologists; O. S. Flint, Assistant Research Professor; Miriam K. Clarke and Felicia Zimnoski, Laboratory Assistants.

Appreciation is extended to all who have aided in the work, particularly to Dr. J. B. Lentz, Head of the Department of Veterinary Science; the County Extension Services; the Department of Poultry Husbandry, Massachusetts State College; and the Massachusetts Department of Agriculture.

TABLE 1 — DISTRIBUTION OF TESTS AND REACTORS, BY COUNTIES AND BY BREEDS

Distribution of Tests and Reactors

In Table 1 is given the distribution of tests and reactors by counties and by breeds. Norfolk, Middlesex, and Plymouth Counties lead in the number of tests. Only two counties had an increase in tests over the previous season, while the remaining counties showed a decrease.

Among the different breeds tested, the Rhode Island Red, Barred and White Plymouth Rock, and White Leghorn represent the leading breeds. It is of interest to note that while the Rhode Island Red breed represents the bulk of the tests, the average percentage of positive tests is below that (0.47) for all breeds. This table also shows that pullorum disease-free stock may be obtained among all the leading breeds in this State.

The outstanding encouraging result is that the average percentage of positive tests has decreased from 0.90 of the previous season to 0.47. Whether this low percentage of positive tests can be maintained depends upon how carefully and conscientiously poultrymen observe measures necessary for establishing and maintaining pullorum disease-free flocks.

Annual Testing versus Single and Intermittent Testing

As the testing work progresses from year to year, the fact becomes more and more evident that annual testing of flocks will retain more flocks in the negative column than single or intermittent testing. Table 2 shows that flocks tested for the first time revealed the highest percentage of positive tests among the four groups. The intermittent group, while small in number of flocks, also exceeded the two annual tested groups in percentage of positive tests. In the group that was tested for three or more consecutive years there are 219 flocks, representing 243,385 birds, which revealed 0.21 per cent reactors. It is hoped that the owners of these flocks will continue to follow the annual testing program. No one can appreciate the progress that has been made in testing without a close study of the reports for the last six years. In spite of the fact that less flocks were tested this year than in the previous year, the number of negative flocks has not decreased in proportion in the groups tested annually. The poultrymen who own negative flocks and practice annual testing realize more profit than a poultryman who adopts any haphazard system of testing. Stock from the latter should be regarded by the buyer as questionable concerning its pullorum disease status.

TABLE 2. ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Per Cent	100% Tested	Partially Tested	100% Tested	Partially Tested

Tested for two consecutive years....	46	24,673	25,759	122	0.47	21	19	4	2
Tested for three or more consecutive years.....	219	243,385	245,617	504	0.21	107	87	16	9
Totals.....	335	296,093	300,714	1,420	0.47	145	131	31	28

Non-Reacting and Positive Flocks Classified by Counties

Table 3 shows that 276 flocks were classified as non-reacting. This is approximately 82 per cent of the total flocks tested, while in the previous season 78 per cent of the tested flocks were non-reacting. In two counties (Suffolk and Hampden) all the tested flocks were classified as non-reacting. The remaining counties had decreases in the number of non-reacting flocks.

TABLE 3—NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

County	100% Tested		Partially Tested		Total

Bristol.....	8	5,067	6	4,131	14	9,198
Dukes.....	1	960	1	960
Essex.....	2	2,431	1	344	3	2,775
Franklin.....	1	599	1	599
Hampshire.....	1	345	4	1,755	5	2,100
Middlesex.....	8	5,796	2	1,850	10	7,646
Norfolk.....	3	22,738	2	440	5	23,178
Plymouth.....	2	1,796	3	1,310	5	3,106
Worcester.....	2	951	8	4,032	10	4,983
Totals.....	31	43,630	28	14,389	59	58,019

The number of positive flocks was 59, representing approximately 17 per cent of the total flocks tested. The total number of birds in these flocks was 58,019, or approximately 20 per cent of the total tested birds. The previous season 100 positive flocks were reported, or approximately 22 per cent of the total tested flocks. Barnstable, Berkshire, and Hampshire Counties have increases in positive flocks over the previous season.

While the percentage of positive flocks has been steadily decreasing, the results show that ample infection still exists without mentioning the untested flocks in this State. Considering this fact, one should appreciate that pullorum disease is more prevalent in Massachusetts than other diseases, such as tuberculosis, fowl cholera, fowl typhoid, and infectious laryngotracheitis. Some poultrymen are inclined to divert their eradication efforts from pullorum disease to other diseases, especially

infectious laryngotracheitis. The latter can be eradicated by measures recommended by the Department of Veterinary Science, Amherst, Mass. While such measures are in principle basic for the eradication of most infectious diseases, some poultrymen do not appreciate that for pullorum disease a diagnostic means is available that aids in the establishment and maintenance of flocks free of this disease. Massachusetts poultrymen at present are not in position to adopt a system of testing different from annual testing, because there are too many sources of infection in this State. In order to reduce the number of infected flocks and to prevent the spread of infection, every effective means should be retained in our eradication program, which includes, above all, annual testing.

The total number of partially tested flocks was 159, representing 107,043 birds, or approximately 36 per cent of the total birds tested.

TABLE 4—COMPARISON OF 1931-32 AND 1932-33 TESTING

County	Flocks	Birds	Tests	Positive	
				Tests Per Cent	Non-Reacting Flocks

Comparison of the Past Two Testing Seasons

In comparing the past two testing seasons, one is greatly impressed by the decrease in tested flocks, birds, tests, and non-reacting flocks. Table 4 shows that Berkshire, Dukes, and Suffolk Counties had increases in tested birds and

tests, and Norfolk County had an increase in tested birds only. Plymouth County shows approximately a 50 per cent decrease in the number of tests. The remaining counties show decreases in tested flocks, birds, and tests. This is true also for non-reacting flocks with one exception: namely, that Hampden County shows an increase.

While the decreases in some counties were slight, in other counties they were more marked. Such circumstances may lead to a situation where some counties may not be able to meet the demand for pullorum disease-free stock, due to a lack of disease-free flocks in the county.

The fact that four counties show an increase in percentage of positive tests and the remaining counties a decrease demonstrates that persistent testing is the only effective means of establishing and maintaining disease-free flocks. The average percentage (0.47) of positive tests is the lowest attained in the testing history. Whether such a low percentage can be maintained depends largely upon the economic condition and attitude of the poultrymen.

Suggestions

Since the most outstanding feature of the season is the decrease in volume of testing, it is essential that everyone concerned with pullorum disease eradication revive interest in establishing and maintaining pullorum disease-free flocks. It should be recognized that economic conditions have had a disappointing influence upon the testing work; but economic conditions are not responsible for all of the decrease in testing. Some flock owners entertain the idea that annual testing is not necessary to maintain a disease-free flock. It is accepted that the agglutination test is not a disease preventive but a diagnostic means which is used to determine the disease standing of a flock. This test is timed to detect infected individuals in the flock early enough so that economic losses and disappointment may be avoided during the hatching season. The flock owner who adopts the intermittent system of testing may sooner or later find himself in trouble. This has been observed frequently during the testing history of this State; and in some of these cases the livelihood of the poultryman has suffered because of disease troubles which could have been avoided if annual testing had been practiced. Assurance of disease-free flocks is made possible by annual testing and strict observance of eradication measures.

Frequently poultrymen report that chicks can be purchased more cheaply out of the State than in Massachusetts. This may be true when one compares only quoted prices, but not the quality of the stock. Pullorum diseased chicks submitted to our diagnostic laboratory can usually be traced to out-of-state flocks or to untested flocks in this State. Poultrymen who buy new stock are advised to buy as near home as possible, so that disease hazards may be reduced to a minimum. They should obtain the latest testing information concerning the source before the purchase is made. Such information may be obtained from the local county agent or from testing officials in other States.

While Massachusetts has made great progress in pullorum disease eradication, there is still much to be accomplished. It is hoped that the trend to omit testing, which was evident this past year, will be only temporary. One who is vitally interested in the pullorum disease standing of Massachusetts flocks for the future will agree that the following measures should be observed by flock owners at all times in order to progress in the right direction:—

1. All the birds on the premises should be tested each year.
2. If infection is present, the entire flock should be retested within four to six weeks until a negative report is obtained, provided the value of the birds justifies the expenditure.
3. Every reactor, regardless of its value, should be removed from the premises and sold for slaughter immediately upon receipt of the report.
4. Offal from all birds dressed for market or home consumption as well as dead birds that are not fit for consumption should be burned.
5. The poultry houses, runs, and equipment should be thoroughly cleaned and disinfected immediately after removal of reactors. Provide an empty pen to each house to facilitate cleaning and disinfection during the winter months. Use disinfectants approved by the United States Department of Agriculture.
6. Birds removed from the premises to egg-laying contests, exhibitions, etc., should be held in quarantine and determined free of disease before they are re-admitted into the flock.
7. Purchase of stock in the form of adults, chicks, and eggs should be from known pullorum disease-free flocks. Consult your county agent regarding additions or replacements in your flock.
8. Eggs should not be saved for hatching until after a flock has been tested and all the infected birds removed. Early pullet testing will permit early hatching.
9. Fresh and infertile eggs from unknown or infected sources should not be fed to chickens or exposed to animals such as crows, sparrows, and skunks that may carry or spread the infection.
10. Poultrymen should not custom hatch for untested or infected flocks.
11. Owners of pullorum disease-free flocks should not have hatching done where infected eggs or stock may be found.
12. Poultrymen should not buy feed in bags that have been used or exposed to infection. (Such bags if properly disinfected will be safe for further use.)

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1933 by 106 firms, covering 495 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	301
Ammoniated superphosphates	5
Superphosphates with potash	2
Dry ground fish, tankage and ground bone	53
Fertilizer simples, including organic nitrogen compounds	83
Tobacco stems	2
Pulverized manures	31
Cotton hull ashes and wood ashes	3
Peat products	7
Stone meal	2
Nitrate of potash	4
Garbage tankage	2
 Total	 495

Representative samples of the following brands were not drawn as they were not found on display by our sampling agents.

¹ Assisted by H. Robert DeRose, Albert F. Spelman, J. W. Kuzmeski, F. Civile Pray, Chemists; James T. Howard, C. L. Whiting, A. G. Brigham, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

Drawing of Samples.

Between April 1 and June 15, four sampling agents working independently made a thorough canvass of the state by means of automobile. Counties assigned to each agent were as follows: James T. Howard, Hampshire, Hampden, Franklin and Berkshire; A. G. Brigham, Worcester; G. E. Taylor, Norfolk, Bristol, Plymouth, Barnstable and Dukes; C. L. Whiting, Essex, Middlesex and Suffolk.

Following are the sampling statistics for the year: 18,276 sacks were sampled, representing 7,285 tons of fertilizer. One ton was sampled to every seven and one-half tons sold in the state. One hundred and eighty-nine towns were visited: 1,686 samples, representing 495 distinct brands, were drawn from stock in the possession of 580 agents or owners; 230 other agents were called upon but no samples were drawn as the agency had been discontinued, stocks all sold out, or already sampled in sufficient amounts at other agencies in the territory.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS.

The following table gives average quotations taken from the Oil, Paint and Drug Reporter and Chemical Markets.

Wholesale Quotations on Chemicals and Unmixed Materials.

NATURE OF MATERIAL.	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1.		Price Per Ton Sept. 25, 1933.	Difference Between Sept. 25 Price and Six Months' Average: Sept. 1, 1932—Mar. 1, 1933.
	1932.	1933.		
Ammonium sulfate (20.5% N), 200 lb. bags, northern ports	\$25.41	\$22.58	\$24.00	+\$1.42
Nitrate of soda (15.5% N), bags, natural or synthetic, ex vessel	36.58	25.68	25.20	-.48
Nitrate of lime (15% N), bags, northern ports, ex vessel	36.24	26.33	25.00	-1.33
Nitrate of potash (13% N, 44% K ₂ O), bags, c.i.f. ports	56.79	56.65	53.50	-3.15
Urea (46% N), car lots, bags, ex vessel	82.60	82.60	82.60	none
Dried blood (12.34% N), ground, bulk, New York	27.13	24.66	40.00	+15.34
Hoof meal (14.15% N), f.o.b. Chicago	22.95	15.12	23.83	+8.71

Cotton hull ashes (25% K ₂ O), bulk, delivered, car lots	-	33.75	33.75	none

The mineral forms of nitrogen have registered a decline in price during 1933 as compared with the previous year, and up to October 1 the only partial recovery noted in this class of ammoniates was confined to ammonium sulfate which had advanced \$1.42 over the six months' average ending March 1. The nitrate forms have continued to decline as will be noted from the above tabulated data; on October 30, however, a slight increase in price was noted over the low prices previously recorded for this form of nitrogen salt.

The cost of most of the organic ammoniates for the six months ending March 1, 1933, was less than for the corresponding period in 1932. The price recovery of most of these products, however, has been quite marked during the early fall (September 25), ranging from 0 in case of synthetic urea to \$8.70 in case of animal tankage and hoof meal. During the month of October, however, a decline in price is noted for most of these products as compared with quotations listed as of September 25; these price declines vary with the different commodities; for blood it was \$1.60 per ton, for hoof meal \$3.32, for animal tankage 50 cents, for cottonseed meal \$2.50, while for fish and castor pomace no change was noted. Synthetic urea was advanced in price during October to \$90 per ton, registering an advance of \$7.40 over September 25.

Superphosphate showed an advance of 21 cents per ton over the six months' average and during October advanced another 50 cents to \$8 per ton, making an actual gain over the six months' average of 71 cents.

Judging from this review of the market, any increase in the cost of mixed fertilizers for 1934 should be due largely to the normal increase in cost of manufacture through the adoption of the N. R. A. code.

The following fertilizer trade values are based on average wholesale quotations of fertilizer chemicals and unmixed materials, as taken from trade journals for six months ending March 1, 1933, to which 20 per cent has been added for overhead. When appropriate, an additional allowance has also been made for bags, labor and transportation.

Fertilizer Trade Values.

FORM OF PLANT FOOD.	Value per Pound.	Unit Value.
Nitrogen.		
In ammonia salts	\$0.065	\$1.30
In nitrates10	2.00
Organic nitrogen in fish20	4.00
Organic nitrogen in blood, meat and hoof meal13	2.60
Organic nitrogen in fine ¹ bone and tankage135	2.70
Organic nitrogen in coarse ¹ bone and tankage and in pulverized manures09	1.80
Organic nitrogen in mixed fertilizers14	2.80
Organic nitrogen in cottonseed meal, castor pomace, linseed meal, etc.17	3.40
Organic nitrogen in urea and calurea1075	2.15
Organic nitrogen in cyanamid06	1.20
Phosphoric Acid.		
Soluble in water and neutral citrate of ammonia (available)045	.90
In fine ¹ bone and tankage and fish045	.90
In coarse ¹ bone and tankage04	.80
In pulverized manures, seed residues, and ashes04	.80
Insoluble in mixed fertilizers02	.40
Potash.		
As sulfate059	1.18
As muriate044	.88
As nitrate04	.80
As carbonate075	1.50
In pulverized manures, seed residues, and the water insoluble portion in ashes04	.80

¹ Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1-50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

FERTILIZER TONNAGE.

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts.

	July 1, 1930, to July 1, 1931.	July 1, 1931, to July 1, 1932.	July 1, 1932, to July 1, 1933.
Mixed fertilizers	43,463	39,689	37,076
Fertilizer chemicals and materials unmixed	19,174	20,325	16,451
Pulverized natural manures	2,426	1,939	1,443
Totals	65,063	61,953	54,970

There were 6,983 tons less fertilizer sold in the state in 1933 than during the previous year. The tonnage of mixed fertilizers was 2,613 less, and that of the fertilizer chemicals and unmixed materials was 3,874 less than for 1932. Pulverized manures showed a decrease of 496 tons.

Of the total tonnage sold, 67.45 per cent was mixed fertilizer, 29.93 per cent was unmixed materials, and 2.62 per cent was dried and pulverized natural manures.

Plant Food Tonnage.

	Nitrogen.		Phosphoric Acid.		Potash.	
	1932.	1933.	1932.	1933.	1932.	1933.
Mixed fertilizers	1,957	1,845	3,386	3,078	2,725	2,408
Fertilizer chemicals and materials unmixed	1,350	1,187	1,476	1,343	534	400
Pulverized natural manures	40	31	27	21	53	40
Totals	3,347	3,063	4,889	4,442	3,312	2,848

There were 1,193 tons less of plant food sold in the state than during 1932, of which 283 tons were nitrogen, 446 tons available phosphoric acid, and 464 tons potash.

There were 10,355 tons of plant food sold, of which 29.59 per cent was nitrogen, 42.91 per cent available phosphoric acid, and 27.50 per cent potash. Mixed fertilizers furnished 70.80 per cent of the plant food, chemicals and unmixed materials 28.31 per cent, and pulverized manures 0.89 per cent.

The three plant food elements were furnished in the following proportions by the mixed fertilizers and the unmixed materials including the pulverized manures: nitrogen, 60.22 per cent from mixed and 39.78 from unmixed; phosphoric acid, 69.28 per cent from mixed and 30.72 from unmixed; potash, 84.55 per cent from mixed and 15.45 per cent from unmixed.

The following table presents tonnage figures for the period from July 1, 1932, to July 1, 1933, for both mixed fertilizers and unmixed fertilizer materials. The fertilizer grades are expressed in round numbers and in the order of nitrogen, available phosphoric acid and potash, which represent the plant food guarantee of each fertilizer grade.

0-14-6	17	-	4-10-0	3	-
10-7-0	10	-	Totals	65	5

Of the 35,997 tons of complete fertilizer guaranteed to contain 14 per cent or more of available plant food, 75.2 per cent was furnished by 7 grades and 140 brands. Double- and multiple-strength grades totalled 969 tons and 20 brands, which was 35 tons less than during the previous year.

Of the mixed fertilizer sold, 97.1 per cent contained 14 per cent or over of available plant food, compared with 96.75 per cent in 1932.

There were 275 tons less of low-analysis (less than 14 per cent available plant food) complete fertilizers sold than in 1932. The 5-3-5 grade, comprising 8 brands, furnished about 78 per cent of the tonnage of these low-analysis goods. About 96 per cent was furnished by 3 grades, comprising 10 brands.

(b) Tonnage of Unmixed Fertilizing Materials.

MATERIAL.	Tonnage.	Brands.	MATERIAL.	Tonnage.	Brands.
Superphosphate . . .	4,205	17	Nitrate of potash . . .	107	-
Nitrate of soda . . .	2,597	8	Sulfate of potash . . .	84	-

Ground tobacco stems . . .	150	-			
			Totals	17,894	193

The tonnage of unmixed materials was distributed as follows: nitrogen products, 39.26 per cent; phosphoric acid products, 24.75 per cent; potash products, 4.03 per cent; tankage, fish, bone, tobacco stems, wood ashes and nitrate of potash, 20.12 per cent; and miscellaneous, 11.85 per cent.

Ten of the most popular grades are listed in the following table in comparison with a similar list for 1932.

1932.		1933.	
GRADE.	Tonnage.	GRADE.	Tonnage.
5-8-7	9,806	5-8-7	10,817
4-8-4	7,337	4-8-4	8,287
4-8-7	4,475	4-8-7	2,858
4-8-10	1,791	4-8-10	1,557
3-10-4	1,428	7-6-6	1,361
7-6-6	1,286	3-10-4	1,162
4-10-5	1,271	6-3-6	1,040
3-8-4	972	5-3-5	786
4-12-4	908	5-8-10	602
5-3-5	862	4-12-4	577

During both 1932 and 1933 the four fertilizer grades bought by the Massachusetts farmers in the largest tonnage were 5-8-7, 4-8-4, 4-8-7, and 4-8-10. The 3-10-4 and 7-6-6 grades, which occupied the fifth and sixth places respectively in 1932, changed places this year. The 4-10-5 grade, which had the seventh largest tonnage in 1932, dropped to the eleventh place in 1933, while the seventh place was taken by the 6-3-6 grade. The 3-8-4 grade, which had the eighth largest tonnage in 1932, occupied eighteenth place this season with a decrease of 687 tons sold; and 5-3-5 occupied eighth place. The 4-12-4 grade with ninth largest tonnage in 1932 dropped to tenth place this year, with a decrease of 331 tons. The 5-8-10 grade, which was in the eleventh place in 1932, took the ninth place this season, but with a decrease of 189 tons over the previous year.

"New England Standard Nine" Grades.

This subject has taken on added interest with the adoption of Article VII, Section 1, of the National Recovery Act Code of Fair Competition of the Fertilizer Industry, in force November 10, 1933. This provides that the number of grades of mixed fertilizer may be materially reduced in any state by the selection, through cooperation of the fertilizer manufacturer with agronomists and Federal and state agricultural officials, of a list of grades suitable to meet the agricultural needs of that particular zone or state. The following table shows how the actual tonnage sold in 1933 corresponded with the nine grades selected by New England agronomists in 1931 to care for the average fertilizer needs of New England.

NEW ENGLAND STANDARD NINE GRADES.	Tonnage.	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods.	Total.
5-8-7	10,817	3,722	14,539
4-8-4	8,378 ^a	486	8,864
4-8-10	1,557	123	1,680
7-6-6	1,361	120	1,481
6-3-6	1,041 ^b	1,494	2,535
3-10-4	1,162	814	1,976
2-12-4	101	-	101
5-8-10	676 ^c	-	676
2-8-10	98 ^d	-	98
	25,191	6,759	31,950

^a Including 89.62 tons of 15-30-15 and 1.5 tons of 8-16-8.

^b Including 1 ton of 10-5-10.

^c Including 74 tons of 10-16-20.

^d Including 5 tons of 4-16-20.

Of the total tonnage of mixed fertilizers sold, 67.94 per cent was from grades recommended in 1931 by New England agronomists to meet New England conditions, and an additional 18.23 per cent was from grades varying but one per cent in one or more plant food elements from the grades thus recommended. Of the ten grades, including the multiple strength mixtures, that have the highest tonnage (29,337 tons), all but three were among the New England Standard Nine. These seven grades showed a total tonnage of 24,992.

Over 14 per cent of the total tonnage of mixed fertilizers was from five grades not included in the New England Standard Nine. They are 4-8-7, third largest tonnage sold; 5-3-5, eighth largest; 4-12-4, tenth largest; 4-8-8, eleventh largest; and 4-10-5, the twelfth largest.

Summary of Deficiencies in Mixed Fertilizers

	1931.	1932.	1933.
Brands deficient in one element	99	59	86
Brands deficient in two elements	15	9	6
Brands deficient in three elements	0	0	1
Brands deficient in nitrogen	23	18	16
Brands deficient in available phosphoric acid	57	27	41
Brands deficient in potash	49	32	44

Serious Commercial Shortages in Mixed Fertilizers

AMOUNT OF SHORTAGE PER TON.	NUMBER OF BRANDS ACCORDING TO YEARS.			
	1930.	1931.	1932.	1933.
More than \$5	1	2	none	1
Between \$4 and \$5	1	none	none	none
Between \$3 and \$4	1	1	2	none
Between \$2 and \$3	none	none	none	2
Between \$1 and \$2	1	3	2	1

Of the 287 brands analyzed, 191, or 66.55 per cent, showed no deficiencies. Out of 851 plant food guarantees made, 88.13 per cent were fully maintained. The deficiency table shows the following statistics:

Deficiencies not exceeding $\frac{1}{4}$ of one per cent, 53.

Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of one per cent, 24.

Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of one per cent, 12.

Deficiencies more than $\frac{3}{4}$ of one per cent, 12.

Of the total number of guarantees of each element made, 6 per cent of the nitrogen, 14.4 per cent of the available phosphoric acid, and 15.5 per cent of the potash were not met. Six of the 16 nitrogen deficiencies, 19 of the 41 available phosphoric acid deficiencies, and 28 of the 44 potash deficiencies, did not exceed $\frac{1}{4}$ of one per cent.

There were 2 less shortages in nitrogen, 14 more in available phosphoric acid, and 12 more in potash, than in 1932.

Nineteen different firms registered five or more brands of mixed fertilizer. Based upon composition found as well as upon tonnage sold, the above table shows to what extent each manufacturer was successful in guarding against deficiencies in plant food guarantee in his assembled mixtures. All of the 19 firms provided for a fair margin of overruns in nitrogen; three firms failed to supply enough available phosphoric acid, and four firms failed to supply sufficient potash to meet the average guarantees. In four other cases the overruns were too small to safely care for accidental variations in the composition of the unmixed materials used in assembling the mixtures.

Explanation of Tables of Analyses.

Guarantee. This column gives the manufacturer's claim or guarantee for the three elements of plant food, nitrogen, available phosphoric acid and potash, in the order stated. The grade of each fertilizer is made a part of the trade name and is expressed as nitrogen, available phosphoric acid and water soluble potash, and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1933, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

Mixtures Showing a Commercial Shortage of \$1 or More Per Ton.

^a One other sample showed a commercial shortage of 25 cents; two other samples were found well up to the guarantee in all three plant food elements.

^b Only five bags were shipped in this lot; none of them were sold at retail. The fertilizer was returned to the factory and satisfactory settlement was made with the agent. This was the only sample of this brand drawn by our inspectors. The manufacturer states that lots of this brand shipped into Connecticut and Vermont were found well above the guarantee in all three elements.

Mixtures Substantially Complying with Guarantees.

Number of Samples.	NAME OF MANUFACTURER AND BRAND.	Guarantee: Nitrogen—Available Phosphoric Acid—Potash	NITROGEN FOUND.			Available Phosphoric Acid Found.	POTASH (K ₂ O) FOUND.

^k Magnesium oxide guaranteed, 2%; found in composite of 4 samples, 2.10%.

^m The water insoluble nitrogen was of inferior quality.

ⁿ The presence of small amounts of chlorine may be due to impurities in the fertilizer chemicals and not to the direct use of muriate of potash.

CHEMICALS AND RAW PRODUCTS

Summary of Results of the Inspection of Fertilizer Simples and Raw Products.

MATERIAL.	Number of Samples Collected.	Number of Analyses Made.	Average Percentage of Nitrogen.	Average Percentage of Total Phosphoric Acid.	Average Percentage of Available Phosphoric Acid.	Average Percentage of Water Soluble Potash.	Average Selling Price Per Ton.	Average Commercial Valuation per Ton.	Cost of One Pound of Plant Food (Cents).
Nitrate of soda	54	13	16.22	-	-	-	\$34.63	\$32.44	10.7 (nitrogen)
Nitrate of potash	8	5	13.24	-	-	44.24	74.00	61.87	14.6 (nitrogen) 4.0 (potash)
Nitrate of lime	4	1	14.82	-	-	-	35.00	29.64	11.8 (nitrogen)
Cal-Nitro	3	1	16.24	-	-	-	33.60	26.80	10.34 (nitrogen)
Ammonium sulfate	53	18	20.77	-	-	-	32.73	27.00	7.9 (nitrogen)
Synthetic urea	4	2	46.24	-	-	-	100.60	99.42	10.9 (nitrogen)
Cyanamid (a)	10	2	22.23	-	-	-	36.43	26.68	8.2 (nitrogen)
Ammo-Phos A	3	1	11.26	48.48	48.16	-	59.77	58.11	6.5 (nitrogen) 4.7 (available phosphoric acid)
Ammo-Phos B	1	1	16.74	21.69	21.12	-	-	41.00	-
Cottonseed meal	50	50	6.79	2.58	-	1.81 ^b	23.77	23.09	17.5 (nitrogen)
Linseed meal	1	1	5.61	1.91	-	1.24 ^b	-	19.07	-
Castor pomace	12	12	5.30	1.77	-	1.02 ^b	28.34	18.02	26.7 (nitrogen)
Dried blood	5	4	11.37	1.65	-	-	40.69	30.96	17.3 (nitrogen)
Milorganite	5	1	5.70	2.68 ^c	-	.48 ^b	26.16	15.49	21.0 (nitrogen)
Superphosphate 16%	84	22	-	17.52	16.61	-	17.83	15.31	5.37 (available phosphoric acid)
Double Superphosphate	4	1	-	32.53	32.53	-	32.20	29.28	4.95 (available phosphoric acid)
Precipitated bone	3	3	-	41.73	40.76	-	41.32	37.07	5.1 (available phosphoric acid)
Basic slag phosphate	2	1	-	17.86	14.61	-	23.47	14.45	8.0 (available phosphoric acid)
Muriate of potash	40	9	-	-	-	51.70	48.29	45.50	4.7 (potash)
High grade sulfate of potash	15	6	-	-	-	49.78 ^d	55.43	58.74	5.6 (potash)
Potash-magnesia sulfate	2	2	-	-	-	28.10 ^e	30.00	33.16	5.3 (potash)
Dry ground fish	25	11	9.52	7.43 ^f	-	-	51.11	44.77	23.3 (nitrogen)
Animal tankage	40	15	9.90	7.97 ^g	-	-	35.12	28.91	14.3 (nitrogen)
Garbage tankage	3	3	2.68	2.81	-	2.10 ^b	-	8.25	-
Ground bone	83	33	3.04	24.17 ^h	-	-	40.22	28.42	-
Wood ashes	3	3	-	1.74 ⁱ	-	4.24 ^b	-	9.27	-
Ground tobacco stems	2	2	1.77	.59 ^j	-	3.92 ^b	19.00	10.25	-
Pulverized sheep manure (k)	47	14	1.72	1.26	-	3.20 ^b	41.69	6.67	-
Pulverized goat manure (k)	2	2	1.15	.77	-	3.74 ^b	-	5.68	-
Pulverized cattle manure (k)	10	6	1.85	1.10	-	1.82 ^b	47.96	5.67	-
Pulverized poultry manure (k)	5	1	5.27	2.39	-	1.05 ^b	50.00	12.24	-
Pulverized manure and peat (k)	4	1	3.05	3.29	-	1.50 ^b	50.00	9.36	-
Pulverized manure and peanut shells (k)	1	1	1.95	1.66	-	2.37 ^b	-	6.74	-
Sheep manure and wool waste (k)	4	2	2.11	.59	-	5.29 ^l	17.48	8.50	-
Pulverized sheep and goat manure (k)	24	9	1.50	1.11	-	3.47 ^b	42.23	6.37	-

a Also contains 50.77% calcium oxide.

b Total potash.

c Iron and aluminum oxides 9.28%, calcium oxide 1.89%, magnesium oxide 1.38%, insoluble matter 11.36%.

d Chlorine 2.10%.

e Magnesium oxide 9.71%, chlorine 1.54%.

f Chlorine .35%.

g Average tankage finer than 1/50 inch, 48.65%; coarser than 1/50 inch, 51.35%.

h Average bone finer than 1/50 inch, 70.18%; coarser than 1/50 inch, 29.82%.

i Average calcium oxide 33.32%, magnesium oxide 4.08%, insoluble matter 14.55%.

j Average organic matter 55.34%, calcium oxide 10.49%, magnesium oxide 1.59%, chlorine 1.52%.

k Average organic matter: sheep manure, 48.45%; cow manure and peanut hulls, 78.15%; goat manure, 34.00%; poultry manure, 68.62%; peat-poultry manure, 68.15%; sheep manure-wool waste, 43.10%; cattle manure, 73.57%; pulverized sheep and goat manure, 37.72%.

Nitrogen Compounds.

The chemicals and unmixed materials under this heading are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element: the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton follow the appropriate table, but are listed by themselves, serious deficiencies therein being emphasized by boldface type.

Nitrate of Soda and Sulfate of Ammonia.

No water soluble potash was found or guaranteed in either product.

Occasional inquiries come to us regarding the value, both commercial and agricultural, of these two Stone Meals. Obviously, both the commercial and agricultural value of any material as a fertilizer must depend largely upon the amount of available plant food which the product supplies. The chemical analysis of metamorphic rocks shows the presence of several substances which make up the greater bulk of such rocks but which can have only a very limited intrinsic or agricultural value; in fact, soils themselves are made up largely of

these constituents. The only elements which the Stone Meals furnish which may have a slight fertilizing value on Massachusetts soils are potash, calcium oxide, magnesium oxide, and phosphoric acid; but the agricultural value of even these four constituents from this source is open to the gravest doubts for the reason that they are present largely as silicates and therefore but very slowly soluble in soil solution. Wolling finds that the average soil at a depth of 1.5 meters (4.92 feet) contains from 3.84 to 14.6% of carbon dioxide; yet even the larger amount would have much less dissolving effect than strong hydrochloric acid diluted with an equal volume of water (this gives a strength of 22.86% hydrochloric acid), which was used in continuous digestion for ten hours at a temperature of boiling water in making a part of the analyses reported above. Assuming, therefore, that the amounts of the four plant food constituents dissolved by the 1-1 hydrochloric acid represent the maximum that would become of value during a reasonable length of time (say five to ten years), the highest value that could be given to these Stone Meals would be \$1.72 per ton for Menderth and 90 cents per ton for McCrillis Stone Meal.

Bulletin No. 70

December, 1933

Inspection of Commercial
Feedstuffs

By Philip H. Smith

This is the thirty-ninth report of feeding stuffs inspection and presents the results of the chemical and microscopic analyses on 1649 samples of feeding stuffs intended for live stock and poultry consumption, collected during the year ending September 1, 1933.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

During the past year 1,044 brands of feed have been registered for sale by 219 manufacturers and dealers; 1,649 samples of feeding stuffs have been collected and subjected to analysis; 200 dealers located in 107 towns and cities have been visited by the feed inspector at least once.

The intent of the Feeding Stuff Act is primarily to prevent deception and misrepresentation in the sale of commercial feeding stuffs. This it does to the extent of information required on the label. The law when enacted was consistent with the scientific knowledge of feeding stuffs of the time. It was written for a period now past, and in order to check properly claims for vitamin potency and other data resulting from more recent scientific discoveries, the Control Service is in urgent need of a biological laboratory. As a matter of justice to the trade and to the consuming public, laboratory facilities should be enlarged. Much could be done with the funds already coming into the State Treasury through feed registrations, of which less than one-half is appropriated for the work for which it is intended.

Of the 1,647 samples of feeding stuffs collected, only 38, or 2.3 per cent, were found to be one per cent or more below their protein and fat guarantee, or more than one per cent over the guarantee for fiber, and in no case to such an extent as to materially affect their feeding value.

¹The following staff members assisted in the inspection: Albert F. Spelman and John W. Kuzmeski, Chemists; Frederick A. McLaughlin, Microscopist; James T. Howard, Inspector; Cora B. Grover, Clerk.

Complete Average Analyses of Feeds Collected (Per Cent).

Certified Ingredients

Allied Mills, inc.

Amco 24% Dairy Ration

Corn gluten feed, corn gluten meal, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, ground oats, dried malt grains, soy bean oil meal, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Amco 20% Dairy Ration

Corn gluten feed, corn gluten meal, cottonseed oil meal, old process linseed oil meal, wheat standard bran, corn meal, ground oats, dried malt grains, soy bean oil meal, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Red Feather Egg Mash

Meat scraps, wheat standard middlings, corn meal, soy bean oil meal, fine ground alfalfa meal, fine ground oats, wheat standard bran, corn gluten feed, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne All Mash Chick Starter with Cod Liver Oil and Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soy bean oil meal, wheat standard bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt, cod liver oil and sardine oil.

Wayne All Mash Grower

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soy bean oil meal, wheat standard bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne All Mash Grower with Cod Liver Oil and Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soy bean oil meal, wheat standard bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt, cod liver oil and sardine oil.

Wayne Broiler Ration

Dried buttermilk, dried skim milk, meat scraps, fish meal, ground yellow corn, fine ground oats, wheat standard middlings, wheat standard bran, soy bean oil meal, choice alfalfa meal, 1.5% ground limestone, 0.04% iron oxide, 0.0005% potassium iodide, 0.25% salt, cod liver oil and sardine oil.

Wayne Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat standard bran, corn meal, fine ground oat meal, corn gluten feed, old process linseed oil meal, choice alfalfa meal, soy bean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Egg Mash with Cod Liver Oil and Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat standard bran, corn meal, fine ground oat meal, corn gluten feed, old process linseed oil meal, choice alfalfa meal, soy bean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt, cod liver oil and sardine oil.

Wayne Mash Concentrate

Dried buttermilk, dried skim milk, fish meal, meat scraps, soy bean oil meal, old process linseed oil meal, corn gluten meal, corn gluten feed, choice alfalfa meal, 4% ground limestone, 0.15% iron oxide, 0.002% potassium iodide and 0.5% salt.

Wayne Poultry Fattener

Ground yellow corn, corn germ oil meal, white hominy feed, rolled oats, oat flour, fine ground oats, wheat standard middlings, wheat red dog flour, old process linseed oil meal and 1% salt.

Wayne Turkey Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, old process linseed oil meal, fine ground oats, choice alfalfa meal, soy bean oil meal, wheat standard bran, 3% charcoal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

A. P. Ames Co.

Ames Egg Mash, with or without Cod Liver Oil

Dried milk, corn meal, wheat bran, wheat middlings, ground oat groats, meat scraps, fish meal, alfalfa meal, calcium carbonate and salt.

Ames Growing Mash, with or without Cod Liver Oil

Oat meal, corn meal, wheat bran, wheat middlings, meat scraps, fish meal, alfalfa meal, calcium carbonate, salt.

Ames Starter and Broiler Ration

Cod liver oil, dried milk, ground oat groats, corn meal, wheat bran, wheat middlings, alfalfa meal, meat scraps, fish meal, calcium carbonate and salt.

20% Balanced Ration

Corn meal, wheat bran, wheat middlings, ground oats, gluten feed, gluten meal, linseed meal, cotton seed meal, calcium carbonate, salt and bone meal.

24% Milk Maker

Corn meal or hominy, wheat bran, wheat middlings, ground oats, gluten feed, gluten meal, linseed meal, cotton seed meal, calcium carbonate, salt, bone meal.

Arcady Farms Milling Co.

Advanced Registry Dairy Feed

Hominy feed, corn gluten meal, soy bean meal, o. p. linseed oil meal, corn gluten feed, dried grains from barley, malt and corn, wheat bran, wheat middlings, cottonseed meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady Besbet Growing Mash

Fish meal, meat scraps, animal liver meal, dried buttermilk, o. p. linseed oil meal, corn gluten feed, corn meal, wheat bran, wheat middlings, alfalfa meal, cod liver oil, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady Besbet Laying Mash

Fish meal, meat scraps, animal liver meal, corn gluten meal, dried buttermilk, o. p. linseed oil meal, oat meal, corn meal, corn gluten feed, alfalfa meal, fine ground oats, wheat bran, wheat middlings, cod liver oil, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady Besbet Starting Mash

Fish meal, meat scraps, animal liver meal, dried buttermilk, o. p. linseed oil meal, corn meal, ground oat groats, wheat middlings, flour middlings, alfalfa meal, bone meal, ground oats, dried yeast, cod liver oil, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady Open Formula Production Ration

Wheat bran, yellow hominy, o. p. linseed oil meal, ground white oats, corn gluten feed, cottonseed meal, corn gluten meal, cane molasses, salt, calcium carbonate from limestone, bone meal.

Old Colony Feed

Cottonseed meal, soy bean meal, hominy feed, corn gluten feed, o. p. linseed oil meal, dried beet pulp, wheat bran, wheat middlings, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady 24% Open Formula Production Ration

Wheat bran, hominy feed, o. p. linseed oil meal, ground oats, gluten feed, cottonseed meal, gluten meal, molasses, salt, calcium carbonate from limestone, bone meal.

Peerless Milk Ration

Cottonseed meal, soy bean meal, corn gluten meal, o. p. linseed oil meal, corn gluten feed, wheat bran, dried grains from barley, malt and corn, cleaned ground and bolted wheat screenings, ground and bolted clipped oat by-product, molasses, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

University all Mash Ration

Fish meal, ground corn, wheat middlings, wheat bran, oat meal, alfalfa meal, meat scraps, animal liver meal, dried buttermilk, cod liver oil, steamed bone meal, 1% calcium carbonate from limestone, 1% salt.

Wonder Complete Broiler Ration

Fish meal, corn meal, ground oat groats, alfalfa leaf meal, pulverized oats, wheat middlings, wheat bran, meat scraps, animal liver meal, dried buttermilk, cod liver oil, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Wonderfat Station Feed

Rolled oat groats, ground white corn, oat meal, corn oil cake meal, o. p. linseed oil meal, wheat flour, meat scraps, $\frac{1}{2}$ of 1% salt.

E. W. Bailey & Co.

Capital Dairy Ration

Corn gluten feed, linseed oil meal, hominy feed, 43% cottonseed meal, ground oats, wheat bran, corn meal, edible bone meal, calcium carbonate and fine salt.

Our 20% Special Dairy Ration

Gluten feed, wheat middlings, oat-meal mill by-products (oat middlings, oat hulls, oat shorts), corn meal, wheat, cottonseed meal, molasses, salt, edible bone meal, calcium carbonate.

Beacon Milling Co., Inc.

Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soy bean oil meal, ground oats, corn meal, ground grain screenings, cottonseed meal, wheat bran, ground barley, brewers' dried grains, molasses, 1% salt, 1% calcium carbonate, 1% calcium phosphate.

Beacon Breeders Mash with Buttermilk

Dried skim milk, dried buttermilk, fish meal, meat scrap, alfalfa leaf meal, corn meal, pulverized heavy oats, pulverized barley, corn gluten meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), soy bean oil meal, old process linseed oil meal, fortified cod liver oil, $\frac{1}{2}$ % fine salt, 3% calcium carbonate, 1% calcium phosphate, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon's Cayuga Growing Mash

Dried skim milk, fish meal, meat scrap, old process linseed oil meal, pulverized heavy oats, corn meal, pulverized barley, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), alfalfa leaf meal, fortified cod liver oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt.

Beacon's Cayuga Laying Mash with Buttermilk

Dried buttermilk, dried skim milk, fish meal, meat scrap, corn meal, alfalfa leaf meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), soy bean oil meal, pulverized barley, corn gluten meal, pulverized heavy oats, fortified cod liver oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt.

Beacon Complete Starting Ration

Dried skim milk, meat scrap, fish meal, ground corn, ground hulled oats, pulverized heavy clipped oats, pulverized heavy barley, wheat bran (may contain mill run screenings), old process linseed oil meal, wheat red dog flour, alfalfa leaf meal, fortified cod liver oil, $2\frac{1}{2}$ % calcium carbonate, $\frac{3}{4}$ % calcium phosphate, $\frac{1}{2}$ % salt.

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, alfalfa meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), 1% calcium carbonate, 1% calcium phosphate, 1% salt.

Beacon Egg Mash with Buttermilk

Dried buttermilk, dried skim milk, meat scrap, fish meal, corn gluten meal, soy bean oil meal, old process linseed oil meal, pulverized barley, pulverized heavy oats, corn meal, alfalfa leaf meal, wheat bran (may contain mill run screenings), wheat middlings (may contain mill run screenings), fortified cod liver oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % fine salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Fleshing Mash and Crate Fattener

Dried skim milk, pulverized oats, ground oat groats, pulverized barley, wheat low grade flour, corn meal, corn oil meal, rolled oats, old process linseed oil meal, fortified cod liver oil, $1\frac{1}{2}$ % calcium carbonate, $\frac{1}{2}$ % calcium phosphate, 1% salt.

Beacon Special Coccidiosis Mash

Dried skim milk, ground yellow corn, pulverized barley, wheat bran (may contain mill run screenings), fortified cod liver oil.

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewers' dried grains, corn distillers' dried grains, wheat bran (may contain mill run screenings), ground oats, ground barley, molasses, 1% salt, 1% calcium carbonate.

Berkshire Coal & Grain Co.**Green Mountain Laying Mash**

Wheat bran, wheat middlings, linseed oil meal, corn meal, fine ground oats, alfalfa meal, meat scraps, bone meal, fish meal, dried skim milk, calcium carbonate, salt, tested cod liver oil.

Green Mountain Dairy Ration

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats and barley, calcium carbonate, salt.

Black Rock Milling Corp.**Bidwell 24% Dairy Ration**

Wheat bran, linseed oil meal, ground barley, cottonseed meal, corn gluten feed, fine ground grain screenings, malt sprouts, corn gluten meal, molasses, calcium carbonate and salt.

Bidwell 20% Dairy Ration

Wheat bran, linseed oil meal, malt sprouts, gluten feed, gluten meal, ground barley, cottonseed meal, fine ground grain screenings, molasses, calcium carbonate and salt.

Bidwell Dry-Mash

Dried buttermilk, alfalfa meal, corn meal, standard wheat bran and wheat middlings, fish meal, meat, bone, linseed oil meal, gluten meal, soy bean meal, calcium carbonate, salt, and ground: wheat, barley, kaffir corn and buckwheat.

Borden Grain Co.**Borden's Dairy Feed**

Wheat bran, wheat middlings, corn meal or hominy, gluten meal, cotton seed meal, gluten feed, linseed oil meal, calcium carbonate, bonemeal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oatmeal, dried milk, alfalfa leaf meal, fish meal, meat scrap, calcium carbonate, salt.

Community Feed Stores, Inc.**Community Chick Mash (starter-grower-broiler)**

Yellow hominy or corn meal, pulverized oats, bran, middlings, red dog flour, meat scraps, alfalfa meal, dried milk, bone meal, cod liver meal, fish meal, salt, cod liver oil.

Community-20 Dairy Ration

41% cottonseed meal, 34% linseed meal, gluten feed, hominy feed, ground oats, middlings, molasses, calcium carbonate, salt, bran.

Community Milk Laying Mash

Yellow hominy or corn meal, ground oats, bran, gluten feed, middlings, meat scraps, dried milk, alfalfa meal, salt, calcium carbonate, cod liver meal, cod liver oil.

Hilltop-20 Dairy Ration

Cottonseed meal 41%, linseed meal 34%, gluten feed, hominy feed, Vim feed, bran, middlings, calcium carbonate, salt, molasses.

Nicolas Courcy

Courcy's Dalry Feed

Bran, middlings, Buffalo gluten, Diamond gluten, 41% cottonseed, 34% linseed, meal or hominy, salt, calcite flour.

Courcy's Eastern Laying Mash

Meal, wheat bran, wheat middlings, feeding oat meal, alfalfa leaf meal, dry skim milk, 50% beef scraps, fish meal, fine salt, calcite flour; with 1% cod liver oil or without.

Courcy's Growing Feed

Wheat bran, middlings, yellow corn meal, feeding oat meal, 50% scraps, linseed oil meal, bone meal, fish meal, calcite flour, leaf meal, milk, salt.

Eastern Starting Feed

Wheat bran, wheat middlings, yellow corn meal, feeding oat meal, bone meal, dry skim milk, leaf meal, fish meal, 60% beef scraps, cracked wheat, hulled oats, fine salt, calcite flour, with 1% cod liver oil or without.

Cover & Palm Co.

The Perfect Dry Mash

Alfalfa meal, hominy feed, corn meal, wheat mixed feed, animal meal, gluten feed, linseed oil meal, beef scraps, oats and oat feed, kafir corn meal, dried buttermilk.

E. A. Cowee Co.

Coweco Growing Mash

Wheat bran, wheat middlings, corn meal, oat meal, soya bean meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Laying Mash

Wheat bran, wheat middlings, oat meal, gluten feed, soya bean meal, linseed oil meal, meat scraps, fish meal, corn meal, dried milk, alfalfa leaf meal, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Lo-Price 20% Dairy Ration

Bran, middlings, ground oats, cottonseed meal, corn meal, gluten meal, linseed meal, ground barley, soya bean meal, cane molasses, bone meal, calcium carbonate and salt.

Coweco 1925 Ration

Wheat bran and middlings, corn meal, cottonseed meal, gluten feed, linseed oil meal, hominy, ground oats, distillers' grains, brewers' grains, soya bean meal, edible bone meal, salt, calcium carbonate and molasses.

Coweco 20% Ration

Wheat bran and middlings, gluten feed, corn meal, distillers' grains, linseed meal, soya bean meal, ground oats, cottonseed meal, brewers' grains, molasses, edible bone meal, calcium carbonate and salt.

Curley Brothers

Crystal All Grain Startling Food

Pure dry buttermilk, cod liver oil, yellow corn meal, ground oat groats, red dog flour, bran, alfalfa leaf meal, cracked wheat, fine cracked corn, steelcut oatmeal, steamed edible bone meal, powdered charcoal, salt, calcium carbonate, white fish meal.

Crystal Egg Mash

Yellow hominy feed, yellow corn meal, bran and middlings, with mill run of screenings, feeding oatmeal, red dog, alfalfa poultry greens, beef scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash

Cod Liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran and middlings with mill run of screenings, feeding oatmeal, yellow hominy feed, yellow corn meal, calcium carbonate, salt.

Crystal 24% Dairy Ration

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers' grains, hominy feed, ground barley, ground oats, bran and middlings with mill run of screenings, edible bone meal, salt, calcium carbonate.

Crystal 20% Ration

Corn gluten feed, yellow corn meal, hominy feed, bran and middlings with mill run of screenings, cottonseed meal, linseed oil meal, beet pulp, steamed edible bone meal, calcium carbonate, salt.

Crystal Starting Food for Broilers

Yellow hominy feed, yellow corn meal, ground oat groats, bran, middlings, red dog flour, alfalfa poultry greens, meat scraps, white fish meal, dried skim milk, pure dry buttermilk, fine cracked corn, steelcut oatmeal, cracked wheat, calcium carbonate, steamed edible bone meal, salt, cod liver oil.

Cutler Co.

King All Purpose Chick and Broiler Ration

Fortified cod liver oil, yellow corn meal, wheat bran, wheat middlings, ground oat groats, high grade meat scraps, fish meal, alfalfa leaf meal, o.p. linseed meal, dried skim milk, edible bone meal, calcium carbonate, salt and pure cod liver meal.

King Baby Chick Starter

Fortified cod liver oil, cod liver meal, pure dried buttermilk, dried skim milk, alfalfa leaf meal, fish meal, fine ground beef scraps, edible bone meal, pure wheat bran, pure wheat middlings, ground hulled oats, ground wheat, yellow corn meal, corn germ meal, calcium carbonate and salt.

King Dairy Feed with Beet Pulp Sweetened

Dried beet pulp, cottonseed meal, old process linseed meal, wheat bran, wheat middlings, corn gluten feed, yellow corn meal, pure ground oats, edible bone meal, pure cane molasses and dairy salt.

King Growing Feed Containing Buttermilk

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, edible bone meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, milo maize wheat bran, wheat middlings, wheat reddog flour, calcium carbonate and salt.

King Mash Feed Containing Buttermilk

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, linseed meal, corn gluten feed, wheat bran, wheat middlings, ground rolled oats, oats, barley, buckwheat, milo maize, calcium carbonate and salt.

King Mash Feed Containing Cod Liver Oil — Buttermilk

Fortified cod liver oil, pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, linseed meal, corn gluten feed, wheat bran, wheat middlings, ground rolled oats, oats, barley, buckwheat, milo maize, calcium carbonate and salt.

King 22 Milk Ration Sweetened

Old process linseed meal, cottonseed meal, corn gluten meal, corn gluten feed, wheat bran, wheat middlings, yellow corn meal, ground barley, ground oats, alfalfa meal, bone meal, calcium carbonate, pure cane molasses and dairy salt.

Delaware Mills, Inc.**Delaware All Mash Laying Food**

Cod liver oil, dried skim milk, meat scrap, bone meal, fish meal, linseed oil meal, corn gluten feed, corn meal, ground wheat, wheat bran, wheat middlings, wheat red dog flour, oat meal, ground barley, alfalfa leaf meal, calcium phosphate, salt.

Delaware Growing Mash (with Dried Skim Milk)

Dried skim milk, alfalfa leaf meal, meat scrap, fish meal, bone meal, linseed oil meal, corn gluten feed, corn meal, wheat bran, wheat middlings, wheat flour middlings, oat meal, wheat meal, calcium phosphate, $\frac{1}{2}$ of 1% salt.

Delco 24% Dairy Feed

Linseed oil meal, corn gluten feed, corn gluten meal, peanut oil meal, cottonseed meal, wheat bran (which may contain mill run screenings), wheat middlings, corn meal, calcium phosphate, salt.

Delco 20% Dairy Feed

Dried beet pulp, linseed oil meal, corn gluten feed, corn gluten meal, peanut oil meal, cottonseed meal, wheat bran, wheat middlings, hominy feed, ground oats, salt, calcium phosphate.

Indian Laying Mash (with Dried Skim Milk)

Dried skim milk, meat scrap, fish meal, bone meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, soya bean oil meal, calcium phosphate and salt.

Indian Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, cottonseed meal, soy bean meal, coconut oil meal, peanut oil meal, wheat bran, wheat middlings, corn meal, ground oats, ground barley, ground wheat screenings, calcium phosphate and salt.

Frank Diauto**Diauto's Dairy Feed**

Gluten feed, corn meal, bran, ground oats, linseed meal, cotton seed meal, salt.

Diauto's Special Egg Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps, dried skimmed milk, fish meal, alfalfa leaf meal, ground oyster shells, common salt.

Albert Dickinson Co.**Dickinson's Globe Egg Mash**

Dried buttermilk, fine ground meat scraps, fish meal, corn gluten feed, linseed oil meal, ground oat groats, wheat bran, wheat standard middlings, corn feed meal, fine ground alfalfa meal, cod liver oil, bone meal, 2% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Dickinson's Globe Growing Ration

Dried buttermilk, sifted meat scraps, fish meal, yellow corn meal, ground oat groats, soy bean oil meal, wheat standard middlings, ground barley, alfalfa leaf meal, corn oil cake meal, cod liver oil, bone meal, 2% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Dickinson's Globe Starting Ration

Dried buttermilk, sifted meat scraps, fish meal, yellow corn meal, ground oat groats, wheat standard middlings, alfalfa leaf meal, bone meal, cod liver oil, 2% calcium carbonate, $\frac{1}{2}$ of 1% salt.

F. Diehl & Son, Inc.**Diehl's Dairy Feed**

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products, ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, Banner Feed, bone, buttermilk, charcoal, fish scraps, gluten meal, linseed meal, meat scraps, middlings and red dog.

Dietrich & Gambrill, Inc.

All Mash Starter & Grower

Corn meal, oat meal, wheat middlings, alfalfa leaf meal, malt flour, peanut meal, fish meal, dried buttermilk, cod liver oil, bone meal, 1% calcium carbonate, 1% salt.

D. & G. Dairy Feed

Cottonseed meal, peanut meal, linseed meal, gluten feed, corn feed meal, wheat bran, ground grain screenings, clipped oat by-products, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt.

D. & G. Turkey Mash

Wheat bran, wheat middlings, corn meal, rolled oats, meat scrap, alfalfa leaf meal, charcoal, bone meal, 1% salt.

Frederick Growing Mash

Wheat middlings, wheat bran, pulverized oats, corn feed meal, gluten feed, meat scrap, dried buttermilk, alfalfa leaf meal, bone meal, 1% calcium carbonate, 1% salt.

Frederick Laying Mash

Wheat bran, wheat middlings, corn feed meal, pulverized oats, gluten meal, meat scrap, fish meal, alfalfa meal, cottonseed meal, bone meal, 1% calcium carbonate, 1% salt, dried buttermilk.

Gambrill's Chick Starter

Oat meal, corn meal, malt flour, alfalfa leaf meal, wheat flour middlings, peanut meal, fish meal, meat scrap, dried buttermilk, cod liver oil, bone meal, 1% calcium carbonate, 1% salt.

Gambrill's 16% Dairy Feed

Cottonseed meal, peanut meal, gluten feed, wheat bran, corn feed meal, ground grain screenings from wheat, clipped oat by-products, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt.

Gambrill's A. I. Dairy Feed

Gluten feed, cottonseed meal, linseed meal, peanut meal, dried brewers grains, wheat bran, corn feed meal, wheat middlings, ground oats, molasses, 1% calcium carbonate, 1% bone meal, 1% salt.

Gambrill's Fattening Mash

Red dog flour, corn meal, oat meal, linseed meal, meat scrap, bone meal, wheat bran, wheat middlings, malt flour, 1% salt.

Gambrill's Laying Mash

Wheat bran, wheat middlings, corn feed meal, linseed meal, pulverized oats, alfalfa leaf meal, gluten meal, malt flour, meat scrap, fish meal, dried buttermilk, bone meal, 1% calcium carbonate, 1% salt.

Pen Mar Dairy Feed

Gluten feed, cottonseed meal, linseed meal, peanut meal, dried brewers grains, ground oats, corn feed meal, wheat bran, wheat middlings, molasses, 1% calcium carbonate, 1% bone meal, 1% salt.

J. L. Dunnell & Son

XL Dairy Ration 24%

Corn meal, gluten feed, wheat bran, cottonseed meal, ground oats, oil meal, salt, bone meal, calcium carbonate.

Excel 20% Dairy Ration

Corn meal, gluten feed, cottonseed meal, wheat bran, ground oats, salt, bone meal, calcium carbonate.

Excel Mash

Corn meal, gluten feed, wheat bran, ground oats, red dog, fish scraps, dried milk, lime, salt and beef scraps.

East Bridgewater Farmers Co-Operative Exchange, Inc.

Special Dairy Feed

Brewers grains, wheat middlings, wheat bran, corn meal or hominy, ground oats, gluten meal, linseed meal, cottonseed meal, beet pulp, molasses, salt.

Special Growing Feed

Yellow corn meal, ground barley, ground heavy oats, wheat bran, wheat middlings, red dog flour, alfalfa leaf meal, beef scrap, dried skim milk, calcite flour, cod liver meal, cod liver oil, salt.

Special Mash Feed

Yellow corn meal, wheat bran, red dog flour, ground heavy oats, alfalfa leaf meal, beef scrap, dried skim milk, cod liver meal, salt.

Eastern Grain Co.

Eastern All Purpose Dairy Feed

Bran, middlings, corn meal, ground barley, oat meal mill by-products (oat middlings, oat shorts, oat hulls), linseed meal, gluten feed, gluten meal, soy bean meal, pure cane molasses, high grade edible bone meal, dairy salt.

Eastern 24% Dairy Sweetened

Bran, middlings, cottonseed, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten meal, ground barley, corn meal, cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Eastern 20% Dairy Feed Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers grains, ground oats, gluten feed, gluten meal, ground barley, corn meal, cane molasses, soy bean meal, high grade bone meal, calcium carbonate, salt.

Eastern States Farmers' Exchange**Eastern States Developer Mash with Oil**

E. S. yellow corn meal—attrition, standard wheat bran, wheat flour middlings, E. S. pure ground barley, E. S. pure ground oats, dry skim milk, soy bean oil meal, alfalfa leaf meal, E. S. meat scraps 50%, pure fish meal 55%, dicalcium phosphate, oyster shell meal, sardine oil, salt.

Eastern States Fulpail Dairy Ration

Standard wheat bran, choice yellow hominy, E. S. pure ground oats, corn gluten feed, E. S. choice cottonseed meal, soy bean oil meal, old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Highland 20

E. S. choice cottonseed meal, oat shorts, oat middlings, oat hulls, choice yellow hominy, dried brewers' grains, standard wheat bran, molasses, soy bean oil meal, corn gluten meal, dicalcium phosphate, salt.

Eastern States Highland 16

Choice yellow hominy, oat shorts, oat middlings, oat hulls, standard wheat bran, dried brewers' grains, E. S. choice cottonseed meal, molasses, corn gluten meal, soy bean oil meal, dicalcium phosphate, salt.

Eastern States Milkmore Dairy Ration

E. S. choice cottonseed meal, choice yellow hominy, corn gluten feed, soy bean oil meal, standard wheat bran, E. S. pure ground oats, old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Producer Mash

E. S. yellow corn meal—attrition, wheat flour middlings, standard wheat bran, E. S. pure ground oats, E. S. meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, dry skim milk, oyster shell meal, dicalcium phosphate, salt.

Eastern States Producer Mash with Oil

E. S. yellow corn meal—attrition, standard wheat bran, wheat flour middlings, E. S. pure ground oats, E. S. meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, dry skim milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Sixteen Dairy Ration

Choice yellow hominy, standard wheat bran, E. S. pure ground oats, E. S. choice cottonseed meal, corn gluten feed, old process linseed oil meal—pure, corn distillers' dried grains, molasses, dicalcium phosphate, salt.

Eastern States Starting and Broiler Ration with Oil

E. S. yellow corn meal—attrition, standard wheat bran, wheat flour middlings, ground oat groats, dry skim milk, alfalfa leaf meal, E. S. meat scraps 50%, pure fish meal 55%, oyster shell meal, salt, sardine oil, dicalcium phosphate.

Eastern States 32% Supplement Feed

E. S. choice cottonseed meal, soy bean oil meal, corn gluten meal, old process linseed oil meal—pure, molasses, standard wheat bran, corn distillers' dried grains, dried brewers' grains, dicalcium phosphate, salt.

Eastern States Turkey-Fat

E. S. yellow corn meal—attrition, standard wheat bran, wheat flour middlings, ground oat groats, dry skim milk, E. S. meat scraps 50%, alfalfa leaf meal, oyster shell meal, dicalcium phosphate, salt.

Eastern States Turkey-Grow

E. S. No. 2 yellow corn meal—attrition, standard wheat bran, wheat flour middlings, ground oat groats, E. S. meat scraps 50%, dry skim milk, alfalfa leaf meal, pure fish meal 55%, sardine oil, oyster shell meal, dicalcium phosphate, salt.

Eastern States Turkey Starter

E. S. yellow corn meal—attrition, E. S. meat scraps 50%, standard wheat bran, dry skim milk, wheat flour middlings, ground oat groats, pure fish meal 55%, alfalfa leaf meal, sardine oil, oyster shell meal, dicalcium phosphate, salt.

Michael W. Ellis**The Ellis Dairy Feed**

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers' grains, cottonseed meal, oil meal, ground oats, calcite flour, salt and edible bone meal. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten, corn meal, rolled oats or feeding oatmeal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal and calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.**Elmore Chixsaver**

Dried milk, wheat flour midds, wheat bran, corn meal, alfalfa leaf meal, oat flour, meat and bone meal, fish meal, cod liver oil, fine table salt.

Elmore Complete Broiler Ration

Yellow corn meal, wheat bran, wheat middlings, oat meal flour, meat meal, edible bone meal, dried buttermilk, alfalfa leaf meal, cod liver oil, salt.

Elmore Eggmaker

Dried buttermilk, meat and bone meal, wheat bran, wheat red dog midds, corn meal, fish meal, ground oats, calcium carbonate, salt.

Elmore Egg Mash

20% dried buttermilk and meat scraps, 2nd clear wheat flour, pure ground oats, wheat middlings, alfalfa leaf meal, corn meal or hominy feed, wheat bran, cod liver oil, not more than 1% calcium carbonate, salt.

Elmore Growing Mash

Dried buttermilk, meat meal, bone meal, wheat midds, wheat bran, low grade wheat flour, alfalfa leaf meal, corn meal, oat flake, gluten feed, salt, cod liver oil.

Elmore Milk Grains

Corn distillers' grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cottonseed meal, dried brewers' grains, calcium carbonate, salt, soy bean oil meal.

Elmore Milk Grains Junior

Corn distillers' grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cottonseed meal, dried brewers' grains, calcium carbonate, salt, soy bean oil meal.

Elmore 16% Pasture Ration

Pure ground oats, corn meal or hominy feed, wheat bran, wheat middlings, cottonseed meal cane molasses, corn gluten feed, calcium carbonate, salt. (Wheat bran may contain ground screenings not exceeding mill run.)

Elmore 32% Supplemental Dairy Ration

Corn gluten feed, corn gluten meal, choice cottonseed meal, linseed oil meal, wheat bran, soy bean oil meal, cane molasses, calcium carbonate, salt.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cottonseed meal, wheat bran, coconut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Elmore Turkey Growing Mash

Dried buttermilk, oat flour, meat meal and bone meal, corn meal, alfalfa leaf meal, wheat bran, wheat midds, second clear wheat flour, cod liver oil, salt.

Emco Feed

Wheat bran, wheat midds, linseed oil meal, beet pulp, corn gluten feed, corn meal or hominy feed, cottonseed meal, calcium carbonate, salt.

Granger 20% Dairy Ration

Wheat bran, wheat midds, ground barley, cottonseed meal, corn gluten feed, corn meal or hominy feed, soy bean meal, cane molasses, reground wheat screenings, calcium carbonate, salt.

R-Own Egg Mash

Wheat bran, wheat midds, meat and bone meal, corn meal, ground oats, corn gluten feed, dried buttermilk, red dog wheat flour, calcium carbonate, salt.

John W. Eshelman & Sons**Eshelman Challenge Dairy Feed**

Wheat bran, cottonseed meal, corn gluten feed, wheat middlings, soy bean oil meal, cane molasses, dried brewers' grains, ground oats, corn feed meal, o.p. oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Conestoga 20 Dairy Feed

Wheat bran, corn gluten feed, dried brewers' grains, cottonseed meal, cane molasses, wheat middlings, soy bean oil meal, o.p. oil meal, oat meal mill by-product (oat midds, oat hulls, oat shorts), reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Golden Rod 25 Dairy Feed

Wheat bran, wheat middlings, corn gluten feed, dried brewers' grains, cottonseed meal, soy bean oil meal, o.p. oil meal, corn feed meal, ground oats, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, corn gluten feed, wheat middlings, dried brewers' grains, cane molasses, cottonseed meal, soy bean oil meal, corn feed meal, ground oats, o.p. oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Open Formula 20 Dairy Feed

Wheat bran, ground oats, corn meal, o.p. oil meal, corn gluten feed, 41% cottonseed meal, soy bean oil meal, cane molasses, bone meal, calcium carbonate, salt.

Eshelman Red Rose 24 Dairy Feed

Wheat bran, wheat middlings, corn gluten feed, dried brewers' grains, cottonseed meal, o.p. oil meal, soy bean oil meal, cane molasses, corn feed meal, ground oats, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Growing Mash with Cod Liver Oil

Wheat middlings, corn meal, wheat bran, meat scrap, pulverized oats, corn gluten feed, pure oat meal, hominy feed, o.p. oil meal, fish meal, 3% dried buttermilk, 2% fine alfalfa meal, ½% salt, ¼% fortified cod liver oil.

Eshelman Red Rose Laying Mash

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o.p. oil meal, fish meal, hominy feed, 3% fine alfalfa meal, 3% dried buttermilk, ½% salt.

Eshelman Red Rose Laying Mash with Cod Liver Oil

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o.p. oil meal, fish meal, hominy feed, 3% fine alfalfa meal, 3% dried buttermilk, ½% salt, ¼% fortified cod liver oil.

Eshelman Red Rose Turkey Mash

Corn meal, rolled oats, wheat bran, wheat middlings, meat scrap, alfalfa leaf meal, dried buttermilk, fish meal, 3% charcoal, ½% salt, ¼% fortified cod liver oil.

Farm Service Stores, Inc.**Big C Growing Mash**

Corn feed meal, wheat feed, ground oats, scraps, dried skim (or dried buttermilk), fish scraps, fine ground alfalfa, calcium carbonate, ½% salt, cod liver oil.

Big C Mash

Corn feed meal (or yellow hominy), heavy mixed feed, gluten feed, old process oil meal, 45% meat scraps, fine ground alfalfa, ground oats, bone meal, calcium carbonate, ½% salt.

Big C Special Dairy Feed

Cottonseed meal, old process oil meal, hominy (or corn meal), corn gluten feed, wheat bran, wheat midds, ground oats, 1% salt, 1% steamed bone meal, calcium carbonate.

Diamond A Dairy Feed

Corn feed meal (or yellow hominy), old process oil meal, corn gluten feed, wheat bran, dried brewers' grains, corn gluten meal, cottonseed meal, stock feed, 1% salt, 1% calcium carbonate.

Diamond C Dairy Feed

Wheat bran, wheat midds, corn meal (or yellow hominy), cottonseed meal, old process oil meal, beet pulp, gluten feed, gluten meal, salt.

Narragansett Indian Egg Mash

Dried skim milk or buttermilk, meat scraps, wheat middlings, yellow corn meal or yellow hominy, wheat bran, corn gluten feed, ground oats, hulled barley, ground oat blowings, old process oil meal, ground alfalfa meal, fish meal, ground calcite, salt.

Narragansett Indian Growing Mash

Dried skim milk or buttermilk, 45% meat scraps, fish meal, wheat middlings, second clear flour, corn feed meal or hominy, wheat bran, corn gluten feed, ground oats, ground barley, hulled barley, old process oil meal, alfalfa meal, salt, bone meal, calcite flour, fine charcoal.

New England Dairy Ration

Diamond gluten meal, Buffalo gluten feed, wheat bran, yellow corn meal or yellow hominy, old process oil meal, cottonseed meal, Sugared Vim Feed, ground limestone, salt.

Quality Growing Mash

With or without cod liver oil. Corn feed meal or yellow hominy, pulverized or ground oats, fine alfalfa meal, wheat midds, wheat bran, gluten feed, old process oil meal, calcium carbonate, 45% meat scraps, bone meal, fish meal, 1% salt, dried skim or dried buttermilk.

Quality Laying Mash

With or without cod liver oil. Corn feed meal (or yellow hominy), ground or pulverized oats, fine alfalfa meal, wheat midds, wheat bran, gluten feed, old process oil meal, calcium carbonate, 45% meat scraps, 1% bone meal, fish meal, dried buttermilk (or dried skim milk), ½% salt.

Vigor 15% Dairy

Soy bean meal, brewers' grains, corn and oat feed, wheat bran, gluten feed, cottonseed meal, old process oil meal, oat feed, cane molasses, calcium carbonate 1%, bone meal 1%, salt 1%, wheat midds, barley flour.

Flory Milling Co., Inc.**Flory's "All-Mash" Chick Starter**

Dried buttermilk, ground oat groats, dried tomato pulp, milk sugar feed (dried whey), yellow corn meal, wheat bran, wheat middlings, meat meal, fish meal, crab meal, linseed oil meal, pulverized barley, reinforced cod liver oil, alfalfa leaf meal, ground wheat, charcoal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's "All-Mash" Growing Ration — with Cod Liver Oil

Yellow corn meal, dried buttermilk, dried tomato pulp, ground white oats, ground barley, wheat middlings, wheat bran, corn gluten meal, meat meal, fish meal, crab meal, soy bean meal, linseed oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), pure cod liver oil.

Flory's Dairy Feed

Cottonseed meal, o.p. oil meal, soya bean meal, corn gluten feed, corn gluten meal, dried brewers' grains, corn meal, alfalfa meal, standard wheat bran, standard wheat middlings, ground oats, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Egg Mash with Cod Liver Oil

Ground oat groats, dried buttermilk, milk sugar feed (dried whey), wheat flour middlings, yellow corn meal, corn gluten meal, wheat bran, dried tomato pulp, fine ground barley, meat meal, fish meal, crab meal, alfalfa leaf meal, linseed oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), pure cod liver oil.

Golden Egg Laying Mash

Dried buttermilk, meat meal, fish meal, crab meal, dried tomato pulp, linseed oil meal, soya bean meal, yellow corn meal, wheat flour middlings, ground barley, wheat bran, ground white oats, choice alfalfa meal, corn gluten meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Golden Egg Laying Mash with Cod Liver Oil

Dried buttermilk, meat meal, fish meal, crab meal, dried tomato pulp, linseed oil meal, soy bean meal, yellow corn meal, wheat flour middlings, ground barley, wheat bran, ground white oats, choice alfalfa meal, corn gluten meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), pure cod liver oil.

Record Dairy Feed

Cottonseed meal, soya bean meal, corn gluten feed, corn gluten meal, standard wheat middlings, standard wheat bran, o.p. oil meal, dried brewers' grains, corn meal, ground oats, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Sunray Dairy Feed

Corn gluten feed, standard wheat bran, cottonseed meal, yellow corn meal, pure cane molasses, hominy feed, linseed oil meal, ground oats, standard wheat middlings, 1% calcium carbonate, 1% steamed bone, 1% salt, soy bean meal, dried malt grains.

Sunray Laying Mash

Wheat bran, wheat middlings, yellow corn meal, soya bean meal, meat meal, fish meal, crab meal, corn gluten meal, choice alfalfa meal, cottonseed meal, ground barley, ground white oats, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Fred A. Fountain**Fountain's Buttermilk Growing Feed**

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, table salt.

Fountain's Buttermilk Laying Mash

Dry buttermilk or dry skim milk, beef scrap, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, fish meal, table salt.

Fountain's Buttermilk Starting Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, calcium carbonate, table salt.

Dean S. French**Special Mash or Poultry Feed**

Wheat feed, corn meal, gluten feed, alfalfa meal, linseed meal, meat scraps, ground oats, ground bone, charcoal, dried milk, salt, cod liver oil.

J. B. Garland & Son**Garland's Economy 20% Dairy Ration**

Bran, middlings, cottonseed meal, gluten meal, linseed meal, ground barley, dried brewers' grains, distillers' grains, soy bean meal, cane molasses, bone meal, calcium carbonate and salt.

Garland's Growing Mash

Corn meal, wheat bran and middlings, red dog flour, calf meal, oat meal, alfalfa leaf meal, soy bean meal, dried milk, meat scraps, fish meal, calcium carbonate, salt and bone meal. (With or without cod liver oil.) (With or without cane molasses.)

Garland's Poultry Mash

Wheat bran and middlings, corn meal, gluten meal, oat meal, alfalfa, soy bean meal, meat scraps, fish meal, dried milk, calcium carbonate, salt, bone meal. (With or without cod liver oil.) (With or without cane molasses.)

Garland's 24% Ration

Wheat bran, middlings, corn meal, hominy, gluten feed, linseed meal, cottonseed meal, soy bean meal, ground oats, brewers' grains, distillers' grains, bone meal, calcium carbonate, salt and cane molasses.

Royal Worcester Complete Ration

Gluten feed, linseed, ground oats, wheat bran, middlings, corn meal, cottonseed meal, soy bean meal, beet pulp, salt, calcium carbonate, bone meal and cane molasses.

General Mills, Inc.**Eventually Gold Medal Chick Ration**

Yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), wheat germ, fine ground oat groats, alfalfa meal, sifted meat scraps, dried buttermilk, cod liver oil, vitamin extract, ground limestone 2½%, salt ¼%.

Eventually Gold Medal Dairy Ration

Wheat bran, wheat germ, standard wheat middlings (with ground grain screenings not exceeding mill run), pulverized oats, yellow corn meal, corn gluten feed, cottonseed meal, linseed oil meal, ground limestone 2 $\frac{3}{4}$ %, salt $\frac{3}{4}$ %.

Eventually Gold Medal Egg Mash for Breeding and Laying with Dried Buttermilk

Yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), corn gluten feed, wheat red dog, fine ground oat groats, alfalfa meal, wheat germ, linseed oil meal, sifted meat scraps, dried buttermilk, ground limestone 1%, salt $\frac{1}{2}$ %.

Eventually Gold Medal Growing Mash with Dried Buttermilk

Corn oil meal, yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), fine ground oat groats, alfalfa meal, sifted meat scraps, dried buttermilk, wheat germ, ground limestone 2 $\frac{3}{4}$ %, salt $\frac{3}{4}$ %.

W. K. Gilmore & Sons, Inc.

Neponset Poultry Mash

Wheat bran, wheat middlings, corn meal, ground oats, alfalfa, beef scraps, fish scraps, linseed oil meal, corn gluten feed, ground rolled oats, calcite flour, dried skim milk, fine salt.

Frank A. Goode

New England Conference Starting & Growing Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats or oat groats, meat scraps 50% protein, fish meal 50% protein, dried skim or dried buttermilk, alfalfa leaf meal, ground oyster shells, salt. With or without 1% cod liver oil.

Storrs Worlds Record Laying Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps 50% protein, fish meal 50% protein, alfalfa leaf meal, dried skim milk, calcium carbonate or ground oyster shells, salt.

D. H. Grandin Milling Co.

Grandin's Baby Chick Starter with Buttermilk — Cod Liver Oil

Dried buttermilk, fine ground hulled oats, ground wheat, corn meal, hominy feed, wheat middlings, alfalfa leaf meal, calcium carbonate, bone meal, one-half of one per cent salt and cod liver oil.

Grandin's 24% Balanced Dairy Ration

Distillers dried grains, cottonseed meal, cocoanut oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Complete Starting Ration with Buttermilk — Cod Liver Oil

Dried buttermilk, cod liver oil, ground meat and bone, fish meal, wheat bran, wheat middlings, alfalfa leaf meal, hominy feed, ground yellow corn, pulverized oats, ground wheat, ground hulled oats, ground barley, calcium carbonate and salt.

Grandin's Growing Mash with Buttermilk — Cod Liver Oil

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate, salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate and a small percentage of salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Milk Maker

Linseed oil meal, cottonseed meal, cocoanut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, beet pulp, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Poultry Green Food

Alfalfa meal, dried beet pulp and cane molasses.

Grandin's Sweetened 24% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 16% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground barley, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 12 Twin Six 12 Dairy Feed

Linseed oil meal, cottonseed meal, cocoanut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, alfalfa meal, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

M-S (Money Saver) 20% Sweet Dairy Feed

Cottonseed meal, corn gluten feed, linseed oil meal, wheat bran, wheat middlings, ground barley, corn meal, corn feed meal, hominy feed, ground grain screenings, oat meal mill by-products (oat middlings, oat hulls, oat shorts), cane molasses, steamed bone meal, calcium carbonate and salt.

Great Atlantic & Pacific Tea Co.

Daily Egg Mash Feed

Ground oats, ground barley, soy bean oil meal, old process linseed oil meal, corn gluten meal, wheat standard middlings, wheat bran, alfalfa meal, corn feed meal, dried buttermilk, dried skimmed milk, meat and bone scrap, fish meal, flour middlings, cod liver oil, cod liver meal, calcium carbonate from limestone 2.5%, steamed bone meal 1½%, salt ½%, red iron oxide 1-10%, and .0015% potassium iodide.

Hales & Hunter Co.

Red Comb Broiler Mash with Dried Buttermilk

Whole ground corn, fine ground feeding oat meal, pulverized oats, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean meal, dried buttermilk and not over 3% minerals, (calcium carbonate, sodium chloride, steamed bone meal, granulated charcoal, iron sulphate, sulphur).

Red Comb Chick Starter with Dried Buttermilk

Whole ground corn, ground oat groats, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa leaf meal, soy bean meal, dried buttermilk and not over 5% minerals, (calcium carbonate, sodium chloride, steamed bone meal, granulated charcoal, iron sulphate, sulphur).

Red Comb Crate Fattener with Rolled Oats

Bolted corn meal, ground oat groats, pulverized oats, corn oil cake meal, linseed oil meal, wheat middlings, low grade wheat flour, rolled oats, steamed bone meal, salt.

Red Comb Egg Mash with Dried Buttermilk

Corn feed meal, feeding oat meal, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean meal, dried buttermilk, and not over 5% minerals, (calcium carbonate, sodium chloride, steamed bone meal, granulated charcoal, iron sulphate, sulphur).

Red Horn 20% Dairy Feed

Corn hominy feed, crimped oat, dried brewers' grains, wheat bran, linseed oil meal, corn gluten feed, corn gluten meal, cottonseed meal, soy bean meal, molasses, calcium carbonate, salt.

J. B. Ham Co.

Farmer Boy 24% Dairy Ration with Molasses

Wheat standard bran, cottonseed meal, bone meal, linseed meal, corn gluten meal, corn meal, corn gluten feed, molasses, salt 1%, calcium carbonate 1%.

Farmer Boy 20% Dairy Ration with Molasses

Wheat standard bran, linseed meal, cottonseed meal, bone meal, corn meal, ground oats, corn gluten feed, molasses, salt 1%, calcium carbonate 1%.

Farmer Boy 18% Dairy Ration with Molasses

Corn gluten feed, cottonseed meal, wheat standard bran, wheat standard middlings, linseed meal, oat middlings, oat shorts, oat hulls, corn meal, molasses, calcium carbonate 1%, salt 1%.

Farmer Boy Egg Mash with Dried Skim Milk and Cod Liver Oil

Wheat standard bran, wheat standard middlings, wheat flour middlings, meat scraps, linseed meal, soy bean meal, sardine meal, dried skim milk, alfalfa leaf meal, corn meal, pulverized oats, iodized salt 1%, calcium carbonate 2%, cod liver oil.

Hamco Egg Mash with Dried Skim Milk and Cod Liver Oil

Wheat standard bran, wheat standard middlings, wheat flour middlings, meat scraps, linseed meal, dried skim milk, alfalfa leaf meal, corn meal, pulverized oats, iodized salt 1%, calcium carbonate 1%, cod liver oil.

D. Harbeck

Welcome Dairy Feed

Bran, beet pulp, cottonseed meal, corn gluten meal, ground oats, hominy or corn feed meal, oil meal, middlings, steamed bone meal 1%, salt 1%.

Horvitz Grain Co.

Make-M-Lay Laying Mash

Wheat bran, corn meal, gluten feed and gluten meal, ground oats, ground barley, red dog, wheat middlings, linseed meal, meat scraps, calcium carbonate, charcoal.

Wantmore Dairy Ration

Hominy feed or corn meal, wheat bran, ground oats, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, calcium carbonate, salt.

Open Formula Mash

Coarse corn meal, wheat bran, white middlings, ground oats 40-42, meat scraps 55% protein, alfalfa leaf meal, steamed bone meal, dried milk, common salt.

Wantmore 24% Dairy Ration Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers ground oats, Buffalo gluten, Diamond gluten, ground barley, corn meal, pure cane molasses, high grade edible bone meal, salt, calcium carbonate, soy bean meal.

Wantmore 20% Dairy Ration Sweetened

Bran, middlings, 43% cottonseed meal, linseed meal, distillers' grains, ground oats, Buffalo gluten, cane molasses, high grade edible bone meal, calcium carbonate, salt, soy bean meal, Diamond gluten, ground barley, corn meal.

Wantmore Dairy with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed & gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, calcium carbonate.

Jersee Co.

Just Right Egg Mash

Standard middlings, standard bran, corn meal, corn gluten feed, fine ground oats, meat scraps, fish meal, charcoal, calcium carbonate (limestone), alfalfa meal, powdered whole and skim milk, St. John's bread (locust bean meal), starch, milk sugar, wheat red dog, oxide iron, di-calcium phosphate, anise, dried blood, iodized salt, yeast, cod liver oil.

Larrowe Milling Co.

Larro — The Ready Ration for Dairy Cows

Yellow corn meal, cottonseed meal, standard wheat middlings (with ground grain screenings not exceeding mill run), o. p. linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, $\frac{3}{4}$ % salt.

Larro Broiler Feed

Yellow corn meal, oatmeal, standard wheat middlings (with ground grain screenings not exceeding mill run), meat and bone scraps, alfalfa meal, wheat bran, dried buttermilk, dried skim milk, cod liver oil vitamin extract, $\frac{1}{2}$ % salt, 2% ground limestone.

Larro Chick Starter

Oatmeal, yellow corn meal, standard wheat middlings (with ground grain screenings not exceeding mill run), dried skim milk, dried buttermilk, meat and bone scraps, wheat bran, alfalfa meal, cod liver oil vitamin extract, $\frac{1}{2}$ % salt, $1\frac{1}{2}$ % ground limestone.

Larro Egg Mash

Oatmeal, standard wheat middlings (with ground grain screenings not exceeding mill run), yellow corn meal, alfalfa meal, wheat bran, meat and bone scraps, dried buttermilk, dried skim milk, cod liver oil vitamin extract, $2\frac{1}{2}$ % ground limestone, $\frac{3}{4}$ % salt.

Larro Growing Mash

Yellow corn meal, oatmeal, wheat bran, standard wheat middlings (with ground grain screenings not exceeding mill run), meat and bone scraps, dried buttermilk, dried skim milk, alfalfa meal, cod liver oil vitamin extract, 2% ground limestone, $\frac{1}{2}$ % salt.

Mansfield Milling Co.

"Mansfield" Dry-Poultry-Mash

Wheat bran, wheat middlings, red dog flour, corn meal, gluten feed, dried milk and meat scraps.

"Mansfield" Cow-Ration

Wheat bran, corn meal, ground oats, ground barley, cotton seed meal, linseed meal, gluten feed, gluten meal and salt.

"Mansfield" Chick-Growing-Feed

Wheat bran, red dog flour, corn meal, oat meal, fish scraps, meat scraps, dried milk and charcoal.

Maritime Milling Co., Inc.

B B Bull Brand All Mash Broiler Growing Ration

Cod liver oil, milk sugar feed, dried buttermilk, alfalfa leaf meal, wheat bran, wheat middlings, ground wheat, corn meal, ground oat meal, pulverized oats, soya bean oil meal, meat meal, fish meal, steamed bone meal, calcium carbonate and salt.

B B Bull Brand All Mash Chick Starter Ration Vitamized with Cod Liver Oil, Milk Sugar Feed, Dried Buttermilk

Cod liver oil, milk sugar feed, dried buttermilk, alfalfa leaf meal, wheat middlings, corn meal, soya bean oil meal, ground oat meal, meat meal, fish meal, ground wheat, steamed bone meal, calcium carbonate and salt.

B B Bull Brand Dairy Ration

Dried brewers grains, o. p. linseed oil meal, cottonseed meal, corn gluten feed, soya bean oil meal, hominy feed, corn meal, wheat bran, wheat middlings, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Sweetened B B Bull Brand "24" Dairy Ration

Dried brewers grains, o. p. linseed oil meal, cottonseed meal, corn gluten feed, soya bean oil meal, hominy feed, corn meal, wheat bran, wheat middlings, molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

B-B Daisy All Mash Starter and Growing Feed Vitamized with Cod Liver Oil, Milk Sugar Feed, Dried Buttermilk

Cod liver oil, milk sugar feed, dried buttermilk, alfalfa leaf meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, ground cat meal, meat meal, fish meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain mill run of ground screenings.)

B-B Daisy Egg Mash with Dried Buttermilk

Dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, fish meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain mill run of ground screenings.)

B-B Hi-Test Dairy Feed 20% Pro. Sweetened

Dried brewers' grains, o. p. linseed oil meal, cottonseed meal, corn gluten feed, soya bean oil meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B-B Marmico 16% Protein Dairy Feed with Molasses

Dried brewers' grains, soya bean oil meal, cottonseed meal, corn gluten feed, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, oat hulls, oat shorts, oat midds, molasses, steamed bone meal, calcium carbonate and salt.

B-B Red-E-Mixt Egg Mash Vitamized with Cod Liver Oil and Dried Buttermilk

Cod liver oil, dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, fish meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain mill run of ground screenings.)

Sweetened Dollar Maker Dairy Feed 24% Pro.

Dried brewers' grains, soya bean oil meal, corn gluten feed, o. p. linseed oil meal, cottonseed meal, corn meal, hominy feed, wheat bran, ground oats, molasses, calcium carbonate, salt and steamed bone meal. (Wheat bran may contain ground screenings not exceeding mill run.)

Sweetened Dollar Maker 20% Pro. Dairy Feed

Dried brewers' grains, soya bean oil meal, corn gluten feed, o. p. linseed oil meal, cottonseed meal, corn meal, hominy feed, wheat bran, ground oats, molasses, calcium carbonate, salt and steamed bone meal. (Wheat bran may contain ground screenings not exceeding mill run.)

Dollar Maker Egg Mash Vitamized with Cod Liver Oil

Cod liver oil, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Dollar Maker Growing Mash Vitamized with Cod Liver Oil

Cod liver oil, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Matheson Vail Co.

Mavco Laying Mash

Coarse corn meal, wheat bran, wheat middlings, ground oats, meat scraps 50%, fish meal 50%, dried skim milk, salt, alfalfa leaf meal, ground oyster shells, cod liver oil.

Geo. Q. Moon & Co., Inc.

Moon's Baby Chick Starter Mash

Roller corn meal, wheat middlings, our make white wheat middlings, fine ground alfalfa meal, meat scrap, bone meal, dried buttermilk, calcium carbonate, calcium phosphate, cod liver oil, $\frac{1}{2}$ of 1% salt, wheat bran, dried skim milk.

Moon's 24% Dairy Ration

Corn distillers grains, o. p. oil meal, corn gluten meal, cottonseed meal, corn gluten feed, wheat middlings and wheat bran (with ground screenings not to exceed mill run), dried brewers' grains, calcium carbonate, $\frac{3}{4}$ of 1% salt, corn meal, soy bean meal, molasses.

Moon's Special A Laying Mash with Dried Buttermilk

Meat scrap, alfalfa meal, standard wheat middlings (with ground screenings not to exceed mill run), corn meal, ground barley, ground oats, ground buckwheat, calcium carbonate, calcium phosphate, $\frac{1}{2}$ of 1% salt, dried buttermilk.

Ontario Milling Co., Inc.

Aunt Mary's Laying Mash with Cod Liver Oil

Dried skim milk, Nopco XX cod liver oil, meat meal, white fish meal, steamed bone meal, heavy poultry pulverized oats, calcium carbonate, soy bean oil meal, old process linseed oil meal, hominy feed or corn meal, corn gluten meal, wheat bran, wheat middlings, alfalfa meal, 1% salt. (Wheat feeds may contain ground screenings not to exceed mill run.)

Big Value 20% Dairy Feed with Molasses

Cottonseed meal, soy bean oil meal, wheat bran, wheat middlings, coconut oil meal, old process linseed oil meal, corn gluten feed, corn gluten meal, hominy feed or corn meal, ground oats, molasses, steamed bone meal, 1% calcium carbonate, 1% salt. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Butterfat Dairy Feed with Molasses

Old process linseed oil meal, wheat bran, corn gluten feed, corn gluten meal, hominy feed or corn meal, cottonseed meal, soy bean oil meal, coconut oil meal, ground barley, ground oats, molasses, steamed bone meal, 1% calcium carbonate, 1% salt. (Wheat bran may contain screenings not to exceed mill run.)

Oswego 24% Dairy Feed with Molasses

Cottonseed meal, soy bean oil meal, corn gluten feed, hominy feed or corn meal, wheat bran, malt grains, ground wheat screenings, molasses, steamed bone meal, calcium carbonate, salt. (Wheat bran may contain screenings not to exceed mill run.)

Oswego 20% Dairy Feed with Molasses

Cottonseed meal, soy bean oil meal, wheat bran, wheat middlings, corn gluten feed, hominy feed or corn meal, o. p. linseed oil meal, malt grains, ground wheat screenings, molasses, 1% steamed bone meal, alfalfa meal, 1% salt, 1% calcium carbonate, coconut oil meal. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Oswego Laying Mash

Dried skim milk, meat meal, white fish meal, heavy poultry pulverized oats, soy bean oil meal, old process linseed oil meal, hominy feed or corn meal, corn gluten feed, wheat bran, wheat middlings, wheat flour middlings, ground oats, alfalfa meal, steamed bone meal, calcium carbonate, 1% salt. (Wheat feeds may contain ground screenings not to exceed mill run.)

Park & Pollard Co.**All-In-One Starting Feed**

Dried buttermilk, vitamin tested cod liver oil, ground wheat, ground barley, corn meal, ground oat groats, alfalfa leaf meal, wheat bran, wheat middlings, Iodol fish meal, meat and bone meal, calcium carbonate and salt.

Bet-R-Milk 20% Ration

Corn gluten feed, linseed oil meal, cottonseed meal, malt sprouts, wheat bran, wheat middlings, hominy feed, Iodol fish meal, molasses, calcium carbonate and salt.

Growing Feed

Dried buttermilk, alfalfa leaf meal, Iodol fish meal, linseed oil meal, meat and bone meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Lay or Bust Dry-Mash with Cod Liver Oil

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soy bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Milk-Maid 24% Sweetened Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, brewers' dried grains, malt sprouts, corn gluten meal, copra oil meal, corn meal, Iodol fish meal, molasses, calcium carbonate and salt.

Overall 24% Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, wheat middlings, corn gluten meal, hominy feed, calcium carbonate and salt.

Park & Pollard Chick Starter

Dried buttermilk, vitamin tested cod liver oil, ground: corn, wheat, barley, oat meal, Iodol fish meal, meat and bone meal, wheat bran, wheat middlings, alfalfa leaf meal, rice, calcium carbonate and salt.

Park & Pollard Turkey Grower

Corn meal, ground: wheat, barley, oats, wheat bran, wheat middlings, alfalfa leaf meal, Iodol fish meal, meat and bone meal, buttermilk, calcium carbonate and salt.

George H. Parker Grain Co.**Parker's Egg Mash**

Yellow corn meal, wheat bran, wheat middlings, ground oats, feeding oat meal, dried skimmed milk, meat scrap, fish meal, alfalfa leaf meal, edible bone meal, calcium carbonate, charcoal and salt.

Parker's Special Dairy Ration

Wheat bran, yellow corn meal, hominy, old process linseed meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, steamed bone meal and salt.

W. N. Potter Grain Stores, Inc.**A. D. P. 24% Dairy Ration**

Ground corn, hominy, cotton seed meal, corn gluten meal, wheat bran, ground oats, oilmeal, calcium carbonate, bone meal, and salt.

Potter's Sweetened Dairy Ration

Gluten feed, hominy, linseed oilmeal, ground oats, wheat bran, standard wheat middlings, cotton seed meal, corn distillers grains, molasses, calcium carbonate, bone meal and salt.

H. C. Puffer Co.**Egg-Em-On Growing Feed**

Corn feed meal, corn gluten feed, ground barley, ground oats, wheat bran, wheat middlings, meat scraps, dried milk, alfalfa meal.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings (not exceeding mill run of screenings), corn feed meal, corn gluten feed, ground oats, linseed meal, alfalfa meal, small percentage salt and calcium carbonate.

Producer Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, corn gluten meal, ground oats, corn feed meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Quaker Oats Co.**Quaker Ful-O-Pep Chick Starter**

Oatmeal, yellow hominy feed, wheat bran, wheat middlings, fish meal, cod liver meal, meat scraps, cod liver oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, 2% steamed bone meal, $\frac{3}{4}$ of 1% salt.

Quaker Fui-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat middlings, barley meal, fish meal, cod liver meal, meat scraps, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Fui-O-Pep Growing Mash

Oatmeal, yellow hominy feed, wheat bran, wheat middlings, barley meal, fish meal, cod liver meal, meat scraps, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, 1% steamed bone meal, $\frac{3}{4}$ of 1% salt.

Quaker 16% Protein Dairy Ration

Hominy feed, yellow hominy feed, cottonseed meal, linseed meal, gluten feed, wheat bran, wheat middlings, ground grain screenings from wheat, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker 20% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley meal, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker 24% Protein Dairy Ration

Hominy feed, yellow hominy feed, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Ralston Purina Co.**Protena 24% Dairy Feed (Buffalo Mill)**

Cottonseed meal, corn gluten feed, wheat middlings (standard), wheat bran, oat mill feed (oat shorts, oat hulls, oat middlings), ground grain screenings (from wheat, flax, corn, oats, barley, kafir), molasses, 1% iodized salt.

Protena 20% Dairy Feed

Cottonseed meal, corn gluten feed, wheat middlings (standard), wheat bran, molasses, 1% iodized salt.

Purina All Mash Egg Chowder

Dried buttermilk, cod liver oil, meat scrap, soy bean oil meal, alfalfa meal, wheat middlings, wheat bran, corn meal, $\frac{1}{2}$ % iodized salt, 4% calcium carbonate (limestone).

Purina All Mash Startena Chow

Dried buttermilk, cod liver oil, meat scrap, fish meal, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, $1\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Breeder Egg Chowder

Dried buttermilk, cod liver oil, alfalfa meal, meat scrap, soy bean oil meal, linseed meal, corn germ meal, wheat middlings, wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Chicken Fatena Chow

Ground oats, ground corn, corn germ meal, wheat flour (second clear), grey wheat middlings, ground barley, linseed meal, rolled oats, $\frac{1}{2}$ % iodized salt, $1\frac{1}{2}$ % calcium carbonate (limestone).

Purina Chick Growena Chow

Dried buttermilk, meat scrap, fish meal, soy bean oil meal, wheat germ, corn germ meal, wheat middlings, wheat bran, alfalfa meal, corn meal, 3% calcium carbonate (limestone), 1% iodized salt.

Purina 34% Cow Chow

Linseed meal, soy bean oil meal, corn gluten meal, cottonseed meal, alfalfa meal, molasses, 1% iodized salt.

Purina 24% Cow Chow

Linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings (standard) wheat bran, alfalfa meal, molasses, 1% iodized salt.

Purina 20% Cow Chow

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat, middlings (standard), wheat bran, corn meal, alfalfa meal, molasses, 1% iodized salt.

Purina Lay Chow

Soy bean oil meal, meat scrap, molasses, alfalfa meal, corn meal, wheat middlings, wheat bran, 1% iodized salt, 4% calcium carbonate (limestone).

Purina Lay Chow (With Dried Buttermilk)

Dried buttermilk, soy bean oil meal, meat scrap, molasses, alfalfa meal, corn meal, wheat middlings, wheat bran, 1% iodized salt, 4% calcium carbonate (limestone).

Reuben W. Ropes**Ropes Balanced Ration**

Yellow meal, hominy, gluten feed, cottonseed meal, bran, oil meal, beet pulp, alfalfa meal, oat feed, ground wheat, rolled oats, gluten meal, molasses, edible bone meal, calcium carbonate, salt.

Ropes Poultry Hash

Corn meal, hominy, gluten feed, oil meal, oat feed, cottonseed meal, wheat meal, bran, alfalfa meal, bone meal, oat meal, dry milk, buttermilk dry, beef scraps, calcium carbonate, salt.

Ropes Sweet Ration

Hominy, bran, cottonseed meal, oat feed, gluten feed, rye meal, corn meal, gluten meal, alfalfa meal, molasses, calcium carbonate, salt.

Ryther & Warren**Blue Tag Dairy Ration**

41% Cottonseed meal, old process linseed oil meal, corn gluten feed, white hominy, standard bran, standard middlings, ground oats, dried beet pulp, calcium carbonate 1% and salt $\frac{1}{2}$ of 1%.

Minot Milk Egg Mash

Yellow corn meal, wheat bran, flour middlings, ground 40-lb. oats, meat scraps 50% pro., fish scraps 55% pro., alfalfa leaf meal, steamed bone meal, dried milk, salt.

Minot Poultry Mash

Wheat bran, wheat middlings, red dog, corn meal, gluten feed, alfalfa meal, ground oats, oat flour, fish and meat scraps, and $\frac{1}{2}$ of 1% of salt.

St. Albans Grain Co.**Hygrade 24 Sweetened Milk Ration**

Corn gluten meal, corn gluten feed, old process linseed meal, old process soy bean oil meal, cottonseed meal, brewers' dried grains, corn meal, ground oats, ground barley, wheat bran, wheat middlings, steamed bone meal, calcium carbonate, dairy salt and pure cane molasses.

Hygrade 20 Sweetened Milk Ration

Old process linseed meal, o. p. soy bean oil meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, steamed bone meal, calcium carbonate and dairy salt.

Hygrade 16 Sweetened Milk Ration

Old process linseed meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, steamed bone meal, calcium carbonate and dairy salt.

Utility Dairy Ration

Old process linseed meal, o. p. soy bean oil meal, corn gluten feed, cottonseed meal, corn meal, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, steamed bone meal, calcium carbonate, pure cane molasses and dairy salt.

Wirthmore All Purpose Chick and Broiler Ration

Fortified cod liver oil, yellow corn meal, wheat bran, wheat middlings, ground oat groats, high grade meat scraps, fish meal, alfalfa leaf meal, old process linseed oil meal, dried skim milk, calcium carbonate, salt and pure cod liver meal.

Wirthmore 25 Balanced Ration

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, pure ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore 25 Balanced Ration Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, pure ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Complete Ration for Layers

Fortified cod liver oil, dried skim milk, choice beef scraps, fish meal, whole oat groats, ground yellow corn, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore 20 Dairy Feed

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore 20 Dairy Feed Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore 16 Dairy Ration Sweetened

Corn gluten meal, corn distillers' dried grains, corn gluten feed, old process linseed meal, brewers' dried grains, yellow corn meal, pure ground oats, wheat bran, wheat middlings, cottonseed meal, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Dairy Feed with Beet Pulp Sweetened

Dried beet pulp, cottonseed meal, old process linseed meal, wheat bran, wheat middlings, corn gluten feed, yellow corn meal, pure ground oats, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Fleshing & Fattening Mash

Fortified cod liver oil, dried skim milk, choice beef scraps, feeding oatmeal, wheat red dog flour, wheat middlings, ground yellow corn, hominy feed, ground barley and pulverized oats.

Wirthmore Growing Mash

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, milo maize, wheat bran, wheat middlings, wheat red dog flour, calcium carbonate and salt.

Wirthmore Growing Mash (containing Fortified Cod Liver Oil)

Fortified cod liver oil, pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, milo maize, wheat bran, wheat middlings, wheat red dog flour, calcium carbonate and salt.

Wirthmore Laying Mash

Pure dried buttermilk, dried skim milk, choice beef scraps, fish meal, yellow corn meal, alfalfa leaf meal, linseed meal, corn gluten feed, wheat bran, wheat middlings, ground rolled oats, oats, barley, buckwheat, milo maize, calcium carbonate and salt.

Wirthmore Turkey Growing Ration

Dried skim milk, choice beef scraps, fish meal, alfalfa meal, yellow corn meal, fine ground oats, wheat bran, wheat middlings, wheat flour middlings, calcium carbonate and salt.

Syracuse Milling Co.**Syracuse Dairy Feed**

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, brewers' dried grains, calcium carbonate and salt.

Syracuse Dairy Feed, Sweetened

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, molasses, calcium carbonate and salt.

Tioga-Empire Feed Mills, Inc.**Egatine, With Cod Liver Oil Added**

Wheat middlings, corn meal, corn gluten meal, wheat bran, cod liver oil, meat and bone scrap, pulverized oats, fish meal, corn gluten feed, alfalfa leaf meal, soy bean oil meal, phosphate of lime, dried skim milk, calcium carbonate, salt. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

E-Gee Dairy Feed

Wheat bran, cane molasses, wheat middlings, hominy feed, corn gluten feed, cottonseed meal, salt, peanut oil meal, phosphate of lime, charcoal, iodine. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Red Brand Tioga Dairy Feed

Cottonseed meal, soy bean oil meal, coconut oil meal, wheat bran, wheat middlings, cane molasses, peanut oil meal, corn gluten feed, salt, phosphate of lime, charcoal, iodine. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Tioga Chick and Growing Mash

Corn meal, wheat middlings, wheat bran, soy bean oil meal, phosphate of lime, fish meal, meat and bone scrap, powdered buttermilk, calcium carbonate, linseed oil meal, alfalfa leaf meal, pulverized oats, corn gluten meal, salt.

Tioga Laying Food

Wheat middlings, corn meal, wheat bran, pulverized oats, fish meal, soy bean oil meal, corn gluten feed, meat and bone scrap, alfalfa leaf meal, calcium carbonate, salt, dried skim milk, phosphate of lime, linseed oil meal, hominy feed. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

United Cooperative Farmers, Inc.**United Farmers Milk Egg Mash**

No. 2 yellow corn meal — attrition, standard wheat bran, wheat flour middlings, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, pure dried buttermilk, steamed bone meal, salt.

United Farmers Milk Pep

Choice cottonseed meal, old pro. linseed meal, choice yellow hominy, corn gluten feed, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), soy bean oil meal, stand. wheat bran, corn dist. dried grains, molasses, steamed bone meal, calcium carbonate, salt.

United Farmers Milkmaker

Choice yel. hominy, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), stand. wheat bran, choice cottonseed meal, old pro. linseed oil meal, corn gluten feed, soy bean oil meal, molasses, corn dist. dried grains, steamed bone meal, calcium carbonate, salt.

C. P. Washburn Co.**"Made Right" Balanced Ration**

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewer's grain.

"Made Right" Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, ground oatmeal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dried skim milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

"Made Right" Starting and Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, ground wheat, soya bean meal, fish meal, dried skim milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

H. K. Webster Co.

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, and cod liver oil.

Blue Seal "20" Dairy Ration

Choice cottonseed meal, hominy feed, malt sprouts, gluten feed, wheat bran, ground oats, P. R. cane molasses, peanut skins, germs, and meal, o. p. oil meal, white fish meal, and salt.

Blue Seal Growing Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground oats, ground barley, h. g. meat scraps, dried skim milk, dried buttermilk, 55% fish meal, gluten meal, alfalfa leaf meal, calcium carbonate, and salt.

Blue Seal Improved All-Mash Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, pure wheat bran, wheat flour middlings, h. g. meat scraps, dried skim milk, dried buttermilk, alfalfa leaf meal, P. R. cane molasses, edible bone meal, salt, cod liver oil, and cod liver meal blend.

Blue Seal Improved Balanced Ration

Choice cottonseed meal, hominy feed, malt sprouts, gluten meal, wheat bran, ground oats, P. R. cane molasses, peanut skins, germs, and meal, o. p. oil meal, corn distillers grains, white fish meal, and salt.

Blue Seal Hom-Mix 24% Dairy Ration

Choice cottonseed meal, gluten meal, malt sprouts, wheat bran, P. R. cane molasses, oat feed, o. p. oil meal, peanut skins, germs, and meal, hominy feed, calcium carbonate, and salt.

Blue Seal Laying Mash

No. 2 yellow corn meal, pure wheat bran, fine ground heavy oats, h. g. meat scraps, corn gluten meal, wheat flour middlings, ground barley, ground fancy wheat, P. R. cane molasses, alfalfa leaf meal, dried skim milk, dried buttermilk, 55% codfish meal, salt, calcium carbonate, and cod liver meal blend.

Blue Seal Milk Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, dried skim milk, 55% fish meal, alfalfa leaf meal, salt, cod liver oil, and cod liver meal blend.

Blue Seal Special 20% Dairy Ration

Choice cottonseed meal, gluten feed, malt sprouts, wheat bran, P. R. cane molasses, oat feed, o. p. oil meal, peanut skins, germs, and meal, hominy feed, calcium carbonate, and salt.

Blue Seal Starting Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, pure wheat bran, wheat flour middlings, high grade meat scraps, dried skim milk, alfalfa leaf meal, calcium carbonate, salt, cod liver oil, 55% fish meal.

West-Nesbitt, Inc.

All Pure 20% Milk Ration

Choice cottonseed meal, corn gluten meal, old process linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Pure Feed Egg Maker

Dried skim milk, bone and meat meal, old process linseed oil meal, corn gluten feed, wheat middlings, wheat flour middlings, hominy or corn meal, steamed bone meal, 1% calcium carbonate, 1% salt.

Super Pure Feed Dairy Ration

Corn gluten feed, wheat middlings, wheat bran, dried yeast grains, hominy or corn meal, cottonseed meal, old process linseed oil meal, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Est. M. G. Williams

Williams' Balanced Ration

Corn meal or hominy, linseed oil meal, cottonseed meal, ground oats, gluten feed, wheat feed, bone meal, 1% salt, dried brewers' grains.

Williams' Chick Starter & Broiler Ration

Corn meal, cut oat groats, beef scraps, middlings, bran, alfalfa leaf meal, dried skim milk, linseed meal, bone meal, lime, granulated charcoal and fine salt.

Williams' Growing Feed

Corn meal, bran, middlings, oatmeal, dried skim milk, leaf meal, fish meal, beef scraps, dicalcium phosphate, calcium carbonate, salt, and cod liver oil.

Williams' Laying Mash

Corn meal, bran, middlings, ground oats, beef scraps, fish meal, leaf meal, dried skim milk, dicalcium phosphate, calcium carbonate, salt and cod liver oil.

Stanley Wood Grain Co.

Bliss Dairy Ration

Corn meal (or hominy), cottonseed meal, wheat bran, linseed meal, wheat middlings, gluten meal, gluten feed, table salt, edible bonemeal, calcium carbonate, (beet pulp).

Preferred Laying Mash

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, yellow corn meal, wheat bran, pulverized oats, wheat middlings, edible bonemeal, table salt, calcium carbonate.

Preferred Starting & Growing Feed

Pure dried skim milk, dried fish meal, yellow corn meal, wheat bran, wheat middlings, fine ground oatmeal, alfalfa leaf meal, beef scraps, edible bonemeal, table salt, calcium carbonate.

Wood's Dairy Ration

Wheat middlings, malt sprouts, linseed meal, corn meal (or hominy), wheat bran, cottonseed meal, gluten feed, ground oats, edible bonemeal, molasses, calcium carbonate, salt.

Water Soluble Protein in Meat Scraps and Fish Meal.

Experimental work at the Indiana Experiment Station¹ has indicated that the water insoluble protein of meat scraps is a more accurate index of their food value than the total protein, although rations containing scrap of high water soluble protein content can be so balanced by the addition of the proper supplementary feeds as to compensate for certain deficiencies.

As a result of this work in Indiana, all samples of meat scraps officially collected in Massachusetts during the season of 1932-33 were analyzed for water soluble protein. The amount of water soluble protein in meat scraps is dependent upon the character of the material rendered. Material high in connective tissue is also high in water soluble protein. Factory inspection has not been attempted; consequently we have no record of the kind of material used, and the results are appended simply to indicate the nature of the meat scraps sold in Massachusetts in relation to their water soluble and water insoluble protein.

In connection with obtaining data on the water soluble portion of the protein of meat scraps sold in the Massachusetts markets, analyses were also made of the fish products officially collected in 1933. It should be understood, however, that the experimental work in Indiana applied to meat products alone and may or may not apply to fish residues. The data are presented merely as a matter of record, and conclusions should not be drawn unless substantiated by experimental proof.

A wide range in the water soluble protein content of these products is shown, due no doubt to several causes, prominent among which would probably be the kind of fish from which the material was derived. It might also depend upon whether the whole fish or only a part was used. The fish meals containing the lowest amounts of water soluble protein are probably glue residues.

Investigation which parallels that on meat products in Indiana should prove advantageous, as the fish meals vary to a greater extent in water soluble protein than do meat scrap and meat tankage.

BULLETIN No. 71

DECEMBER, 1933

Inspection of Agricultural
Lime Products

By H. D. Haskins

This is the twenty-second report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold, supplemented by comparative costs of units of effective oxides present. The use of the analytical data in estimating the most economical product to purchase is also given.

Massachusetts State College
Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1933

By H. D. Haskins, Official Chemist.¹

Manufacturers and Brands.

During 1933, twenty-four firms registered for sale in Massachusetts thirty-nine brands of agricultural lime and one of gypsum or land plaster. The products are grouped as follows:

Hydrated or slaked lime	17
Ground limestone,	19
° Lime kiln ashes,	1
Oyster shell lime,	2
	<hr/>
	39
Gypsum	1

Every brand of agricultural lime registered has been analyzed and results appear in the appropriate table in this bulletin. The same inspectors sampled the lime products who were employed in drawing samples of fertilizers. In this manner the state is quite thoroughly covered and the results of inspection should give a fair picture of the quality of the lime products used as soil amendments. A total of 66 samples was drawn from stock found in the possession of 59 agents or owners.

Variations and Deficiencies in the Composition of Lime Products.

Two brands of hydrated lime were a little deficient in calcium oxide: the "Sweet-Arrow" hydrate manufactured by H. E. Millard, and R-R Land Lime manufactured by the Rockland & Rockport Lime Corp. In both cases, however, the neutralizing effect of the magnesium oxide overruns more than balanced the small deficiencies of calcium oxide so there was no commercial shortage.

The Red Top Hydrated Lime registered by the United States Gypsum Co. had a deficiency of 4.45 per cent calcium oxide and an overrun of 1.4 per cent of magnesium oxide; this, changed to calcium oxide equivalent (1.4×1.39), would give 1.95 per cent, leaving a deficiency of 2.5 per cent calcium oxide, or 50 pounds in one ton. It would appear that the calcium oxide guarantee on this brand (75%) was somewhat high, as pure hydrated lime can contain only 75.7 per cent calcium oxide. No other serious deficiencies were noted in this table.

No serious deficiencies occurred in the ground limestone products listed in Table II; small deficiencies noted either in calcium oxide or in magnesium oxide were more than made up by overruns in the other ingredient so that the neutralizing value of the brand was not lessened.

Purchase of Lime Products.

In using the tables of analyses for the selection of liming materials, quotations should be secured on the basis of delivered cost at the nearest railroad station or, in case of truck delivery, at the farm. This ton cost should then be divided by the number of hundred pounds of calcium oxide equivalent in one ton of the product as given in the analysis tables. This will give the cost of 100 pounds of effective oxides delivered. Example: A lime product is quoted at \$4.25

¹Assisted by H. Robert DeRose, and John W. Kuzmeski, Chemists; James T. Howard, C. L. Whiting, A. G. Brigham and G. E. Taylor, Sampling Agents.

per ton f.o.b. plant; the freight to point of destination is \$2.75; and the product contains about 1,100 pounds of effective oxides per ton, as shown by analysis. $\$4.25 + \$2.75 = \$7.00 \div 11.00 = 63.6$ cents, which is the cost of 100 pounds of effective oxides.

Explanation of Tables of Analyses.

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO_2). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked) or as burned lime (caustic or unslaked). It should be understood that all of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

"Calcium oxide equivalent" represents the acid neutralizing value of both the magnesium and calcium, expressed in terms of calcium oxide. The figures in the "per cent" column are obtained by multiplying the magnesium oxide by the factor 1.39 and adding the calcium oxide; or they may be obtained by a direct titration with standard acid. All samples are checked by both methods in this laboratory. The "pounds in one ton" are secured by multiplying the figures in the "per cent" column by 20. The "cost of 100 pounds" is based on prices furnished by the producers.

Table II, "Calcium oxide equivalent: per cent and pounds in one ton." In securing these data the degree of fineness to which the limestone has been ground is taken into consideration. On those products which are finely ground so that all of the material will pass through a 20-mesh sieve, it is assumed that all of the calcium and magnesium oxides will become available in the soil within a five-year period. On those products which will not wholly pass a 20-mesh sieve, it is assumed that the oxides in that portion which is coarser than 20-mesh will be only 50 per cent effective during the same period. The magnesium oxide found is multiplied by the factor 1.39 and added to the calcium oxide in estimating the calcium oxide equivalent.

In the column headed "Carbonates of calcium and magnesium" the calculation allows for the small amounts of calcium and magnesium combined as basic silicates; these are readily soluble in mineral acid solutions but obviously should not be classed as carbonates.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

In both tables the figures in parenthesis following the brand name show the number of samples collected and analyzed.

MASSACHUSETTS AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN No. 72

FEBRUARY, 1934

Seed Inspection

By F. A. McLaughlin and Margaret E. Nagle

This Report, the sixth in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1933 by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274).

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

ANNOUNCEMENT

The Seed Testing Laboratory will allow ten units of work free of charge, during any calendar year, to any resident firm or citizen of Massachusetts. Work in excess of ten units and all work for non-residents will be charged for according to existing schedule. (See Circular, "How the Massachusetts Seed Law Operates," Massachusetts Agricultural Experiment Station Seed Inspection Service, October, 1927.)

Units are rated as follows:

	Units
Purity analysis (red clover, timothy, etc.)	1
Purity analysis (bluegrass, orchard grass, etc.)	2
Purity analysis of a mixture of seeds (depending upon the number of kinds in the mixture)	4 - 10
Examination for noxious weeds (4 oz. or fraction thereof) of samples not mixtures	1
Examination for noxious weeds (4 oz. or fraction thereof) of mixtures	4 - 10
Identification of seed or plant	1
Cleaning tobacco seed (4 oz. or fraction thereof)	2
Germination tests (4 x 100 seeds, of any seed not chaffy or requiring a purity test)	1
Germination tests (soil, 2 x 100 seeds)	1
Germination tests (chaffy grasses or seeds requiring purity analysis)	2 - 4

SEED INSPECTION

By F. A. McLaughlin and Margaret E. Nagle¹

This bulletin gives the results of analysis of official seed samples, collected by the State Department of Agriculture during the year 1933 from the open markets in seventy-five towns and cities of Massachusetts, and analyzed at the Seed Testing Laboratory of the Massachusetts Agricultural Experiment Station at Amherst. Between October 1, 1932, and October 1, 1933, the Seed Laboratory analyzed 1188 samples, of which 507 were collected by the State Department of Agriculture, 180 submitted by dealers and farmers, and 191 by the Rhode Island Department of Agriculture; 266 were purchased from wholesalers for special tests; and the remaining 44 were accounted for in germination tests of ingredients of grass seed mixtures.

This bulletin also contains results of field tests for trueness to type of 280 samples of sweet corn, conducted by the Department of Vegetable Gardening, also notes on the relation of seed-borne diseases observed in laboratory germination of sweet corn to emergence in the field. Type and variety tests of legumes, conducted by the Department of Agronomy are recorded.

SUMMARY OF RESULTS

Alfalfa to Vetch

The following table of analysis covering the 145 samples of seed in this group shows that again, as in former years, the most common violation of the seed law is the lack of certain required information on the label. This information was lacking, wholly or in part, for 52 samples (35.86%). Other deficiencies shown are 33, or 22.80%, below in germination; 9, or 6.20%, with excessive weed seed; and 12, or 8.28%, below in purity. In all, 84 samples (57.93% of this group) either did not comply with the label requirements or were not up to guarantee, even when proper tolerance allowances were made.

Mixtures of Not More Than Two Lots of Seeds

No samples declared as such were taken by inspectors. Two samples, however, sold for pure seed of a single kind, were found to be mixtures of two sorts of seed. The table shows them otherwise deficient.

Special Mixtures

Thirty-eight samples were analyzed in this group. Twenty-one (52.63%) lacked the whole or part of the label. Eight samples (21.05%), though adequately labeled, were found to contain excessive weeds or inert material, or both. Certain other minor irregularities were found, but on the whole the quality of seed for this group appears to be fair to excellent.

Vegetable Seed

A larger number of samples of vegetable seed were taken than formerly. Each of the 320 samples tested met the label requirements of the law. On the whole the quality of seed as shown by germination is above that of any previous collection of official samples tested in this laboratory; yet 119, or 37% of the samples, show germination below the standards required by law in many states (Seed Control Bulletin 56, 1930, page 4) and 55 of them (17%) are below Virginia state standards. While averaging better than formerly in germination, the record shows much to be desired in quality of many vegetable seeds sold in Massachusetts. One cause

¹ Miss Jessie L. Anderson served as seed analyst for a period of three months.

of the poor showing is the practice among retailers of offering for sale seed which has been in their possession for one or more years. Seeds of certain varieties may retain satisfactory viability for several years if properly stored, but other kinds lose a large part of their viability in one year. Where old seed is noted in the tables, we believe the wholesaler should be for the most part absolved from blame.

Explanation of Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Vetch, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F" what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, or excessive inert material, depending upon the column in which it is found.

Other deficiencies are enumerated as follows:

- (1) Noxious weeds found.
- (2) Old seed.
- (3) Ingredient found in excess of 5%, but not declared.
- (4) Ingredient declared, but not found.
- (5) Does not appear to be Chewings Fescue as labeled.
- (6) Bluegrass and White Clover declared, but not found.

The letter "R" after the germination percentage in the table of vegetable seeds indicates that one or more retests were made.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance," the sample is considered as made up of two component parts: (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus twenty per cent (20%) of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination (%)</i>	<i>Allowable Variation (%)</i>
90 or over	6
80 or over, but less than 90	7
70 or over, but less than 80	8
60 or over, but less than 70	9
Less than 60	10

Laboratory and Field Germination Tests of Sweet Corn
Seed Laboratory, Departments of Botany and Vegetable Gardening Cooperating

The purpose of this project is two-fold: First, to compare germination results obtained in the seed testing laboratory with those obtained in the field, in order to evaluate the relation between field and laboratory testing of sweet corn, so that from careful observation of the laboratory germination test one may be able to predict the field performance of the same seed; and second, to determine the kinds of disease organisms that occur in commercial lots of sweet corn and their effects upon germination both in the laboratory and in the field. Official rules for seed testing were followed in making all tests.

In the laboratory the rag-doll method was used; that is, the seeds were placed between folds of moist paper toweling, rolled up, and wrapped in a sheet of oiled paper. Tests were alternated between germinators which are kept at constant temperatures of 20° and 30° C. They were allowed to remain in the 30° oven for a period of 8 hours and then placed in the 20° oven for 16 hours. Preliminary counts of the germinated seeds were made after tests had been in the ovens 3 days, a second record taken after 5 days, and a final one at the end of 8 days. Some varieties of sweet corn germinate much more quickly than others, but 8 days seems to be the maximum requirement for most varieties. During the 1933 season 200 seeds each of 253 samples were tested. Three divisions were considered in the germination readings: Normal sprouts, abnormal seedlings, and dead or otherwise non-viable seeds. To be called normal a seedling must have produced a strong plumule and a vigorous root system, it must be apparently disease-free, and the root and shoot must be of good measure, depending upon the variety of corn. Seedlings were classed as abnormal because of weakness as shown by slow development or effect of disease. All tests were critically examined and records kept of percentages of normal and abnormal seedlings, as well as of the kinds and percentages of disease present in each lot.

Field plantings were made in carefully prepared soil, 200 seeds of corn being planted from each sample that had been tested in the laboratory. The soil was rather moist and heavy, and the temperature was cool during the test period. Preliminary counts of plants were made at the end of 2 weeks. After 4 weeks the plants were removed from the soil and final observations recorded. Normal and abnormal plants were counted. All plants were inspected for disease and findings carefully tabulated.

The following is a summary of the results, with interpretations.

1. Number of seed lots germinated in the laboratory and in the field	253
2. Germination in the laboratory (average of all lots)	<i>Per Cent</i>
a. Abnormal due to diseased roots or shoots	8.9
b. Abnormal due to other causes	2.7
c. Dead or otherwise non-viable seeds	6.5
d. Normal germination	81.9
3. Total emergence in field (average of all lots)	71.3
a. Weak and diseased seedlings	0.7
b. Normal germination	70.6

The probable reasons why the laboratory germination was higher than the field germination are: First, laboratory conditions of moisture and temperature are nearer the optimum requirements for germination than field conditions; second,

a final reading was made 3 days after the usual 5-day count, thus allowing some slow seedlings to be included in normals; and third, conditions in the field test happened to favor the activity of molds and other seed-borne organisms which caused more kernel decay during and before germination in the field than occurred in the laboratory.

Summary of the Mold and Disease Readings

1. The most common molds that occurred in the laboratory germinations were species of *Rhizopus*, but *Mucor*, *Penicillium*, *Aspergillus*, and *Cladosporium* were also present.

2. Molds were observed in 92.7 per cent of the lots tested in the laboratory; and Scutellum Rot, caused largely by *Rhizopus* and other molds, in 96.5 per cent.

3. Molds (mostly *Rhizopus*) caused root infection in the laboratory trials in a larger number of lots than any other single fungus, such as *Fusarium*, *Gibberella*, *Diplodia*; and in nearly as many lots as those three types of fungi combined. Although injury to the seedlings appeared not necessary for infection by any of those organisms, yet *Penicillium* infection occurred mostly at breaks in both the roots and shoots.

4. There appeared to be no definite relation between the amount of molds in a rag-doll and the amount of seedling infection caused by molds. Some lots with heavy mold contaminations showed little or no seedling infection; while others with light molds may have shown marked infection. Perhaps the variety was an important factor.

5. In the laboratory the presence of molds in the germinator, together with prominent Scutellum Rot, appeared to have little effect upon germination. For example: 50 lots that were selected for light-to-very-light molds averaged only 3.6 per cent higher normal germination than 50 lots that showed heavy-to-very-heavy mold contamination. This difference might well be accounted for by the slightly greater amount of seedling infection in the heavy-mold series.

6. On the other hand, in the field emergence test, the same series of low-mold lots averaged 22.3 per cent higher normal germination than the heavy-mold lots. Furthermore, the low-mold series averaged almost as high germination in the field as in the laboratory, being only 3.5 per cent lower in the field; whereas, in the heavy mold series there was a difference of 21.3 per cent in favor of laboratory over field germination.

7. It is believed that the greater depressing effect of molds on normal germination in the field test was due to kernel decay before and during germination. In the laboratory, kernel decay by the molds had not progressed beyond the Scutellum Rot stage at the time the final readings were made.

8. In the laboratory test, kernel discolorations due to such seed-borne disease fungi as *Fusarium*, *Gibberella*, *Diplodia*, *Alternaria*, *Hormodendron*, *Cephalosporium*, and *Basisporium*, were attended by only slight reduction in normal germination, and the same was true in the field test. For example: 77.5 per cent of the lots germinated in the laboratory showed "pink" kernels, varying from 1 to 42 per cent of the kernels in a lot, and caused by species of *Fusarium*, *Cephalosporium*, and *Gibberella*; yet 50 lots which contained from none to 3 per cent

of "pinks" averaged only 3.3 per cent higher germination in the laboratory than another series of 50 lots with from 4 to 42 per cent "pinks."

9. The same may be said in part for kernel discolorations caused by *Diplodia*, *Hormodendron*, *Basisporium*, and *Alternaria*. In proportion to the number or percentage of discolored kernels in a given lot of seed, *Diplodia* appeared to have a greater depressing effect upon germination in both the laboratory and the field than any one of the other seed-borne disease organisms except *Rhizopus*. It appeared to infect the roots of seedlings more readily than *Fusarium* or *Gibberella*, and perhaps as readily as *Rhizopus*.

10. Although soil conditions might be considered ideal for growth of most of the seed-borne fungi which commonly cause seedling blight and root, stalk and ear rots of corn, yet they exerted no such depressive effect upon emergence in the field germination test as did the presence of moderate-to-heavy mold contaminations under the same field conditions.

11. Since the field-maturity planting was located in the same place where the corresponding test was grown last year, little dependence could be placed upon the disease readings that were made during the growing season, because most of the seed-borne disease organisms are able to winter over in refuse in the soil and attack the second-year crop. Exception might be made in the case of Bacterial Wilt or Stewart's Disease which is not definitely known to be carried over from one year to the next in the field.

12. Stewart's Disease was observed as primary infection in 25 lots, ranging from 1 to 6 per cent of the stalks. Seven lots showed primary infection of bacterial spot (*Bacterium holci*).

13. Other diseases that may have had their origin with the seed were black bundle (*Cephalosporium acremonium*); stalk and ear rot due to *Gibberella* sp. and *Fusarium* spp. and *Diplodia zeae*; also, a spotting or mottling of foliage which was perhaps virus in character.

In a season with copious rainfall during field germination, but not excessive wetting of the soil, and with rather a heavy type of soil for the emergence test, ample opportunity was afforded to ascertain the effects of molds and other disease organisms carried with the seed upon normal germination. Molds, particularly *Rhizopus* spp., reduced normal germination much more in the field than was suspected might occur. On the other hand, although there was evidence that all such seed-borne disease fungi as species of *Fusarium*, *Gibberella*, and *Diplodia* in particular, reduced emergence and normal germination in the field, yet the occurrence of abnormals from seedling infection by those fungi was not as extensive as might be expected judging from the amount of kernel discoloration and root infection found in the laboratory series. In many instances lots comparatively free from molds but showing considerable seedling infection in the laboratory from *Fusarium* or *Diplodia* gave higher normal germination in the field than in the laboratory, indicating that such organisms might not affect germination in the field as much as in the laboratory--even when there are few or no abnormals from other causes concerned.

Such germination tests as these conducted with sweet corn in 1933 should furnish valuable information not only to seedsmen and growers, but also to analysts and any others who are interested in the relation of laboratory germination tests to emergence and normal germination in the field, as well as in the effects of various seed-borne fungi upon germination in both the laboratory and the field.

Type and Variety Studies of Sweet Corn

Conducted in Conjunction with the Department of Vegetable Gardening
Prof. Grant B. Snyder

The field trials of sweet corn for 1933 included 280 lots consisting of 90 different named sorts from 29 sources. The seed was purchased in all cases from the seed firm or grower. In conducting the trials every effort was made to maintain as uniform cultural conditions as possible and to evaluate plant and ear characters on a fair basis.

Detailed records were taken of each lot as to plant, ear, and kernel characters and season of maturity. Refractive indices were taken of kernels for 29 of the more important sorts during their maturity periods. Kernel toughness was studied by use of a pressure tester for 15 varieties during their maturity periods and under varied conditions after harvesting. These records are available to anyone interested by communication with the Department of Vegetable Gardening.

In general, the sorts included were true in type for the variety designated by the seedsman. The more standard varieties exhibited very little variation, while the newer sorts such as Golden Gem, Spanish Gold, Top and King's Crossed Bantam, showed some variation in plant height, maturity season, rows of kernels per ear, and kernel size. These variations, however, were not sufficient to classify the sort as being off-type or misnamed, except as noted below.

Golden Gem, S. D. Woodruff & Sons: Lot resembled Spanish Gold.

Spanish Gold, S. D. Woodruff & Sons: Plant taller and later in maturity than typical for variety.

Golden Sunshine, Thomas W. Emerson Co.: Plant shorter than Sunshine, with ears similar to Golden Early Market.

Golden Sunrise, Thomas W. Emerson Co.: Resembled Golden Sunshine.

Pocahontas, J. J. Gregory & Son: Lot variable.

Stowell's Evergreen, Harris Seed Co.: Lot shorter and earlier in maturity than other strains of variety tested.

While some variation in size of ear and number of rows of kernels per ear was noted for the various sorts studied, very few deviated from a permissible tolerance. In Golden Bantam, those strains having 10 to 14 rows per ear were largely listed as Improved Golden Bantam. This distinction from the standard Golden Bantam, which has 8 rows per ear, is quite desirable. It was also noted that the hybrid sorts, as Top Crossed Bantam, etc., were somewhat more resistant to Stewart's Disease than the standard varieties.

Type and Variety Tests of Legumes

Conducted in Conjunction with the Department of Agronomy

Continuing the project of trueness to type and variety of legumes, which the Department of Agronomy has conducted for several seasons, 14 samples of Alfalfa, 29 samples of Red Clover, and 3 samples of Sweet Clover were tested. All samples were found true to type for the variety labeled by the vendor of the seed.

CONTROL SERIES

BULLETIN NO. 73

OCTOBER, 1934

**Fourteenth Annual Report on
Eradication of Pullorum Disease
in Massachusetts**

By the Poultry Disease Control Laboratory

The purpose of this bulletin is to report the results of pullorum disease testing for the 1933-34 season. In the discussion of the results an effort has been made to point out what factors have been overlooked as well as those that have been observed in eradicating pullorum disease from the flocks.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

FOURTEENTH ANNUAL REPORT ON PULLORUM DISEASE ERADICATION IN MASSACHUSETTS

1933-34

By the Poultry Disease Control Laboratory¹

Introduction

The purpose of pullorum disease testing in the State of Massachusetts is to establish and to identify pullorum disease-free flocks in order that poultrymen may prevent losses from this disease due to decreased fertility and hatchability, chick and adult mortalities, and reduced sales. Testing records extending over a period of fourteen years clearly show that much progress has been made in establishing pullorum disease-free flocks. The accomplishment in eradication of the disease in many of the flocks is largely attributed to persistent testing under State supervision, together with the cooperation received from flock owners, members of the Poultry Department, Massachusetts State College, State Extension Service, and other agencies.

Reduction in Price of Testing

During the past year the price of testing was reduced to seven cents per bird, including the cost of the legband. This price is the same or less than that charged in neighboring states where the testing work is conducted in a similar manner. While certain agencies, principally those having a commercial interest, have advocated a test which is lower in price, this laboratory has maintained the policy that the poultry industry in this State deserves a high quality service which will yield results upon which a sound business can be constructed. However, an effort is made to perform the testing operations at the lowest cost possible, in order to extend this service to the greatest possible number of poultry breeders, without sacrificing accuracy or reliability of the results.

Summary of Service Rendered

Applications received	278
Applications cancelled	16
Flocks tested	262
Number of tests	284,916
Chickens	284,848
Fowl other than chickens:	
Routine	14
Experimental	54
Owners receiving necropsy service	41
Necropsies of reacting birds	83

¹Poultry Disease Control Laboratory Staff:—H. Van Roekel, Chief of Laboratory; K. L. Bullis and D. M. Yegian, Assistant Veterinary Pathologists; O. S. Flint, Assistant Research Professor; Miriam K. Clarke and Felicia Zimnoski, Laboratory Assistants. Appreciation is extended to Dr. J. B. Lentz for assistance given to the testing work.

.....(Per cent)	0.00	0.86	1.05	0.02	0.71	0.68	0.09	0.19	0.92	0.53	0.00	0.33		

Distribution of Tests and Reactors

As shown in Table 1, 12 counties submitted a total of 284,848 samples to the laboratory. The percentage of positive samples was 0.53. Norfolk, Middlesex, and Worcester Counties had the largest number of tests. Two counties, Barnstable and Suffolk, had no reactors among the tested birds. Four counties had less than one-half of 1 per cent positive tests among the birds tested, while in only one county (Bristol) were the total positive tests greater than 1 per cent.

Value of Annual Testing

Table 2 shows that 37 flocks were tested for the first time, representing 14,140 tests, of which 1.26 per cent were positive. In the intermittent group 21 flocks were tested, which revealed 1.30 per cent positive tests. In both these groups the percentages of positive tests are lower than those for the same groups in previous years. Although the number of birds represented is small, it appears that the effect of continuous testing for 14 years in this State has expressed itself in these two groups. The stock in some of these flocks is progeny of pullorum disease-free breeding stock.

TABLE 2.—ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Per Cent	100% Tested	Partially Tested	100% Tested	Partially Tested
Tested for the first time.....	37	13,952	14,140	178	1.26	17	10	5	5
Intermittent testing.....	21	12,142	13,303	173	1.30	6	8	4	3
Two consecutive years.....	26	11,551	11,733	332	2.83	9	12	3	2
Three or more consecutive years	178	225,596	245,672	829	0.34	124	43	7	4
Totals.....	262	263,241	284,848	1,512	0.53	156	73	19	14

Among the 26 flocks tested for two consecutive years, the percentage of positive tests was 2.83. The fact that this percentage is higher than in any of the other three groups is explained in part by one flock in this group which revealed 61.23 per cent reactors.

It is encouraging to note that of the total number (262) of flocks tested, 178 have been tested for three or more consecutive years. Approximately 86 per cent of the tests, of which 0.34 per cent were positive, represent flocks tested for three or more consecutive years. Further, only 11 of the 178 flocks were classified as infected, which points out that through annual testing, supplemented by effective preventive measures, flocks can be maintained free from pullorum disease. The maintenance of such a large nucleus of pullorum-free flocks will in turn effectively establish a larger group of free flocks through properly controlled

distribution of eggs, baby chicks, and adult stock. The flock owners of pullorum-clean flocks are justified in priding themselves on the fact that they have so conclusively demonstrated that they were capable of establishing and maintaining flocks free of this disease. Furthermore, the owners of pullorum-clean flocks have realized a mental satisfaction, as well as financial saving, as the result of no losses suffered from pullorum infection.

The percentage of flock owners who tested all the birds on the premises has increased from 52.6 in 1932-33 to 66.8 in 1933-34. The soundness of testing all birds on the premises cannot be ignored, because the exact status of a flock cannot be determined with any degree of certainty by testing only part of the birds.

Appearance of Infection in Flocks Previously Negative

During the 1933-34 season infected birds were found in 12 flocks that had been negative for one or more years. Table 3 shows that in all but three of these flocks the percentage of reactors was less than one. The source of the infection

TABLE 3.—INFECTED FLOCKS WITH A PREVIOUS NEGATIVE TESTING HISTORY

Flock No.	Number of Years Negative	1933-34 Season			Explanation
		Flock Total	Number Tested	Positive Tests Percent	
1	5	1,599	1,598	0.19	Unsatisfactory

		1,447	*1,356	0.00	
11	4	1,310	1,310	0.23	Unsatisfactory
12	3	1,295	1,295	0.08	Unsatisfactory

*Represents retests.

could not be accounted for in all cases. Custom hatching and the purchase of questionable or infected stock were in most cases responsible for the infection. This points out the fact that persons introducing new stock should make a very thorough investigation of the disease status of the flock. Since purchases of new blood lines are not apt to be made on the spur of the moment, as a rule, there is ample opportunity to determine the true status of a flock from which stock is desired.

The value of annual testing is again manifest in these 12 flocks. The fact that the majority of the so-called "breaks" revealed less than 1 per cent reactors suggests that the infection had not had the opportunity to multiply, as would have been the case if the infected birds had been permitted to remain in the flock undetected to perpetuate and increase the amount of infection. Generally when re-infection occurs, the smaller the amount the less difficult it is to eradicate.

The number of re-infected flocks can be reduced to a minimum only when poultrymen conscientiously adopt measures that prevent the introduction of infection.

Non-Reacting and Positive Flocks Classified by Counties

Table 4 shows that at the close of the testing season 229 non-reacting flocks, representing 212,782 birds, were identified in 12 counties. Middlesex County had the largest number (43) of non-reacting flocks, representing 45,183 birds. A total of 33 positive flocks was detected in 10 counties. The number of birds in these flocks was 50,459, approximately equal to one-fourth the number of non-reacting flocks. No positive flocks were detected in Barnstable and Suffolk Counties. Middlesex and Worcester Counties had the largest number of positive flocks.

It is, indeed, encouraging to observe that approximately four-fifths of the total tested birds are found in non-reacting flocks. Having increased the ratio between the number of birds in positive and non-reacting flocks in favor of the latter, one is led to believe that the number of positive flocks will be reduced to a minimum in the near future. The time may not be far distant when the testing program can be so conducted that all flocks can be credited with at least one negative test. This is entirely plausible since, as the number of positive flocks becomes less, more attention and special consideration might be given to them in order to establish non-reacting flocks. Furthermore, the owners of non-reacting flocks should bear in mind that the number of positive flocks would also be less if they prevented re-infection in their flocks. By following up the different avenues through which infection is spread, and instituting the necessary preventive measures, the foci of infection may be gradually eliminated. When a free flock is once established there is no danger of re-infection, unless it be through uncontrollable and unknown avenues which appear to play a very insignificant role, according to our present knowledge. Therefore, it rests with the poultrymen to observe effective preventive measures in an eradication program, since without this cooperation the testing and control agencies can make little or no progress.

TABLE 4.—NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

County	100% Tested		Partially Tested		Total

Comparison of 1932-33 and 1933-34 Seasons

In Table 5 a brief summary of results of the last two seasons is presented. A comparison of data reveals a decrease in the number of tested flocks, tested birds, tests, and non-reacting flocks, also a slight increase in the percentage of positive tests. While there have been decreases in the number of flocks, birds, and tests, yet the percentage of birds in the non-reacting flocks was slightly greater in 1933-34 than in the previous season. These data show that the testing has dropped off considerably in certain counties. It may be questioned whether the flock owners in these counties realize and appreciate the time, effort, and expenditure required to bring their flocks to the status of pullorum disease freedom, which should not be jeopardized by the discontinuation of the testing program that has demonstrated itself to be effective in establishing and maintaining pullorum-clean flocks. Some poultrymen have resorted to the whole-blood test, for which they pay less, but the results obtained are not reliable in the minds of those who are interested in complete eradication of the disease as well as in determining the true status of the flock.

Pullorum disease testing in Massachusetts is not in its infancy. It is an established, progressive movement benefiting the poultrymen with increasing

proportions each year. Our primary object at the present time is to maintain the flocks free of the disease and to establish additional clean flocks through closely supervised testing and supervised replacements from known free flocks. Haphazard testing, which in this instance means testing one year and not the next, employing unreliable testing methods, indiscriminate buying of stock and failure to observe effective eradication and preventive measures, all lead to failure in the eradication of pullorum disease. Massachusetts poultrymen cannot afford to lose what has been gained through 14 years of persistent testing in eradicating the disease from their flocks.

NOVEMBER, 1934

Inspection of Commercial
Fertilizers

By H. D. Haskins

This is the sixty-first report of the Massachusetts Fertilizer Control made in accordance with Chapter 94, Sections 250 to 261, inclusive, of Massachusetts General Laws 1920, as amended by Chapter 67, Acts of 1933.

Massachusetts State College
Amherst, Mass.

INSPECTION OF COMMERCIAL FERTILIZERS FOR THE SEASON OF 1934

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1934 by 95 firms, covering 439 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	265
Ammoniated superphosphates	3
Superphosphates with potash	1
Dry ground fish, tankage and ground bone	47
Fertilizer simples, including organic nitrogen compounds	77
Tobacco stems	1
Pulverized manures	26
Cotton hull ashes and wood ashes	3
Peat products	9
Stone meal	2
Nitrate of potash	5
 Total	 439

¹ Assisted by H. Robert DeRose, Albert F. Spelman, J. W. Kuzmeski, Raymond D. Coldwell, Chemists; James T. Howard, C. L. Whiting, A. G. Brigham, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

Samples of the following brands were not drawn as they were not found on display by our sampling agents.

Brands of Fertilizer Registered but Not Sampled.

Drawing of Samples.

Between April 1 and June 15, four sampling agents made a thorough canvass of the state: James T. Howard in Hampshire, Hampden, Franklin, and Berkshire counties; A. G. Brigham in Worcester County; G. E. Taylor in Norfolk, Bristol, Plymouth, Barnstable, and Dukes counties; and C. L. Whiting in Essex, Middlesex, and Suffolk counties. They visited 202 towns, took 1,688 samples, representing 421 brands, from stock in the possession of 550 agents or owners, and called upon 285 agents where no samples were drawn because the agency had been discontinued, the stock was all sold out, or sufficient samples had already been taken of the brands found. They sampled 17,935 sacks representing 7,433 tons of fertilizer. One ton was sampled to every seven and seven-eighths tons sold in the state.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS.

The price of both ammonium sulfate and sodium nitrate has advanced during the year and while the former has held steady at the advanced price, the latter salt has shown a decline of about \$1 per ton from the six months' average ending March 1, 1934. Calcium nitrate and potassium nitrate have sold for somewhat less per ton in 1934 than during the previous year: the latter salt was quoted at \$5.65 per ton less on September 24 than for the six months' average ending March 1. Most of the organic ammoniates have shown a decided advance in price over 1933, and with the exception of synthetic urea and dry ground fish had shown no decline in price on September 24, 1934.

Superphosphate has shown a small but consistent advance in price during the season.

All potash salts have shown a decline in price during the season, ranging from \$2.50 per ton in case of sulfate of potash-magnesia, to over \$15 per ton in case of muriate.

In view of the above it seems quite likely that the price of mixed fertilizers for 1935 will be somewhat lower than during the past season.

The following table gives average quotations taken from the Oil, Paint and Drug Reporter and Chemical Markets.

Wholesale Quotations on Chemicals and Unmixed Materials.

NATURE OF MATERIAL.	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1.		Price Per Ton Sept. 24, 1934.	Difference Between Sept. 24 Price and Six Months' Average: Sept. 1, 1933-Mar. 1, 1934.
	1933.	1934.		
Ammonium sulfate (20.5% N), 200 lb. bags, northern ports	\$22.58	\$26.48	\$26.50	none
Nitrate of soda (15.5% N), bags, natural or synthetic, ex vessel	25.68	26.44	25.50	-\$0.94
Nitrate of lime (15% N), bags, northern ports, ex vessel	26.33	25.72	26.50	+ .78
Nitrate of potash (13% N, 44% K ₂ O), bags, c.i.f. ports	56.65	53.65	48.00	-5.65
Urea (46% N), car lots, bags, ex vessel	82.60	104.72	100.00	-4.72
Dried blood (12.34% N), ground, bulk, New York	24.66	39.18	48.00	+8.82
Hoof meal (14.15% N), f.o.b. Chicago	15.12	32.08	34.40	+2.32
Animal tankage (8.23% N, 6.86% P ₂ O ₅), ground, bulk, New York	17.30	26.35	31.50	+5.15
Dry ground fish (9.02% N, 6.86% P ₂ O ₅), bags, Baltimore	30.50	40.92	39.00	-1.92
Cottonseed meal (5.75% N), bags, at mill	15.24	21.29	30.00	+8.71
Castor pomace (4.52% N), bags, car lots, f.o.b. works	12.45	17.12	18.50	+1.38
Ground bone (2.47% N, 22.88% P ₂ O ₅), bags, f.o.b. Chicago	17.40	21.73	16.00	-5.73
Superphosphate (16% avail. P ₂ O ₅), bulk, f.o.b. Baltimore	7.29	7.92	8.50	+ .58
Muriate of potash (50.54% K ₂ O), bags	37.15	37.15	22.00	-15.15
High grade sulfate of potash (48.65% K ₂ O), bags	47.50	42.15	35.00	-7.15
Potash-magnesia sulfate (25.94% K ₂ O), bags	27.80	25.00	22.50	-2.50
Cotton hull ashes (25% K ₂ O), bulk, delivered, car lots	33.75	33.75	21.25	-12.50

The following fertilizer trade values are based on average wholesale quotations of fertilizer chemicals and unmixed materials, as taken from trade journals for six months ending March 1, 1934, to which 20 per cent has been added for overhead. When appropriate, an additional allowance has also been made for bags, labor and transportation.

Fertilizer Trade Values.

FORM OF PLANT FOOD.	Value per Pound.	Unit Value.
Nitrogen.		
In ammonia salts	\$0.075	\$1.50
In nitrates	.1025	2.05
Organic nitrogen in fish	.21	4.20
Organic nitrogen in blood, meat and hoof meal	.175	3.50
Organic nitrogen in fine ¹ bone and tankage	.2075	4.15
Organic nitrogen in coarse ¹ bone and tankage and in pulverized manures	.14	2.80
Organic nitrogen in mixed fertilizers	.1725	3.45
Organic nitrogen in cottonseed meal, castor pomace, linseed meal, etc.	.2375	4.75
Organic nitrogen in urea and calurea	.11	2.20
Organic nitrogen in cyanamid	.078	1.56
Phosphoric Acid.		
Soluble in water and neutral citrate of ammonia (available)	.0475	.95
In fine ¹ bone, tankage and fish	.0475	.95
In coarse ¹ bone and tankage	.0425	.85
In pulverized manures, seed residues, and ashes	.0425	.85
Insoluble in neutral citrate of ammonia in mixed fertilizers	.02	.40
Potash.		
As sulfate	.048	.96
As muriate	.039	.78
As nitrate	.039	.78
As carbonate	.095	1.90
In pulverized manures, seed residues, and the water insoluble portion in ashes	.04	.80

¹ Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1/50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

FERTILIZER TONNAGE.

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts.

	July 1, 1931, to July 1, 1932.	July 1, 1932, to July 1, 1933.	July 1, 1933, to July 1, 1934.
Mixed fertilizers	39,689	37,076	40,160
Fertilizer chemicals and materials unmixed	20,325	16,451	15,870
Pulverized natural manures	1,939	1,443	1,614
Totals	61,953	54,970	57,644

There were 2,674 tons more fertilizer sold in the state in 1934 than during the previous year. The tonnage of mixed fertilizer was 3,084 more, and that of the fertilizer chemicals and unmixed materials was 581 less than for 1933. Pulverized manures showed an increase of 181 tons. Of the total tonnage sold, 70 per cent was mixed fertilizer, 27 per cent was unmixed materials, and 3 per cent was dried and pulverized natural manures.

Plant Food Tonnage.

	Nitrogen.		Phosphoric Acid.		Potash.	
	1933.	1934.	1933.	1934.	1933.	1934.
Mixed fertilizers	1,845	2,028	3,078	3,438	2,408	2,745
Fertilizer chemicals and materials unmixed	1,187	1,144	1,343	1,344	400	484
Pulverized natural manures	31	33	21	24	40	44
Totals	3,063	3,205	4,442	4,806	2,848	3,273

There were 931 more tons of plant food sold in Massachusetts than during 1933, of which 142 tons were nitrogen, 364 tons available phosphoric acid, and 425 tons potash.

There were 11,284 tons of plant food sold, of which 28 per cent was nitrogen, 43 per cent available phosphoric acid, and 29 per cent potash. Mixed fertilizers furnished 73 per cent of the plant food, chemicals and unmixed materials 26 per cent, and pulverized manures 1 per cent.

The three plant food elements were furnished in the following proportions by the mixed fertilizers and the unmixed materials, including the pulverized manures: nitrogen, 63 per cent from mixed and 37 per cent from unmixed; phosphoric acid, 72 per cent from mixed and 28 per cent from unmixed; potash, 84 per cent from mixed and 16 per cent from unmixed.

The following tables present tonnage figures for the period from July 1, 1933, to July 1, 1934, for both mixed fertilizers and unmixed fertilizer materials. In the case of the mixed fertilizers the grade represents the plant food guarantee of each fertilizer and is expressed in the order of nitrogen, available phosphoric acid, potash.

SUPERPHOSPHATE WITH POTASH.

0-14-6	12	-			
--------	----	---	--	--	--

Of the 40,148 tons of complete fertilizer guaranteed to contain 14 per cent or more of available plant food, 76 per cent was furnished by 7 grades and 114 brands. Double- and multiple-strength grades totaled 1,449 tons and 22 brands, which was 480 tons more than during the previous year.

Of the mixed fertilizer sold, 98 per cent contained 14 per cent or over of available plant food, compared with 97 per cent in 1933.

There were 244 tons less of low-analysis (less than 14 per cent available plant food) complete fertilizers sold than in 1933. The 5-3-5 grade, comprising 8 brands, furnished 73 per cent of the tonnage of these low-analysis goods. About 91 per cent was furnished by 4 grades, comprising 11 brands.

(b) Tonnage of Unmixed Fertilizing Materials.

MATERIAL.	Tonnage.	Brands.	MATERIAL.	Tonnage.	Brands.
Superphosphate	4,466	14	Ground tobacco stems.	115	-
Nitrate of soda	2,288	6	Nitrate of potash	114	5
Ground bone	1,905	26	Dry ground fish	102	9
Pulverized animal manures	1,614	26	Basic slag phosphate	71	-
Cottonseed meal	1,453	9	Sulfate of potash	64	-
Cyanamid	1,117	-	Linseed meal	60	-
Sulfate of ammonia	867	9	Wood ashes	55	-
Muriate of potash	685	7	Double superphosphate	48	-
Milorganite	594	-	Calcium nitrate	36	-
Peat	476	9	Precipitated bone	29	-
Animal tankage	443	10	Urea	20	-
Cal-Nitro	266	-	Ammo-Phos	18	-
Stone Meal	251	-	Miscellaneous	29	9
Castor pomace	154	8			
Cotton hull ashes	149	-	Totals	17,489	171

The tonnage of unmixed materials was distributed as follows: nitrogen products, 39 per cent; phosphoric acid products, 26 per cent; potash products, 5 per cent; tankage, fish, bone, nitrate of potash, ammo-phos, tobacco stems, and wood ashes, 16 per cent; and miscellaneous, 14 per cent.

Ten of the most popular grades of mixed fertilizer are listed in the following table in comparison with a similar list for 1933.

1933.		1934.	
GRADE.	Tonnage.	GRADE.	Tonnage.
5-8-7	10,817	5-8-7	13,346
4-8-4	8,287	4-8-4	8,399
4-8-7	2,858	4-8-7	3,013
4-8-10	1,557	4-8-10	2,310
7-6-6	1,361	7-6-6	1,415
3-10-4	1,162	4-8-8	1,085
6-3-6	1,040	3-10-4	1,080
5-3-5	786	5-8-10	762
5-8-10	602	4-12-4	651
4-12-4	577	8-16-16	591

The five fertilizer grades sold during 1934 in Massachusetts in the largest tonnage were likewise recorded and in the same order during 1933, as will be seen from the above table. The 4-8-8 had the sixth largest tonnage in 1934. This grade which in composition is very similar to the 4-8-7, differing only by a one per cent increase in potash, very likely reflects the advertising propaganda of the potash exporters. It is questionable whether the 4-8-8 grade would on the average in Massachusetts prove more effective than would the 4-8-7 grade.

The tobacco grades 6-3-6 and 5-3-5, which had the seventh and eighth largest tonnage in 1933, dropped to twelfth and eleventh place, respectively; due largely, no doubt, to the curtailment in acreage devoted to this crop in 1934. Only 2,092 acres of tobacco were grown in Massachusetts in 1934, 1,696 acres being grown under contract with the government and 396 acres not under contract; 5,154 acres were rented to the government on which no tobacco was grown. There was about a 75 per cent reduction in the tobacco acreage in Massachusetts in 1934. The seventh and eighth places were held this year by the 3-10-4 and 5-8-10 grades, which in 1933 occupied sixth and ninth place respectively.

The 4-12-4 grade, which had the tenth largest tonnage in 1933, was in the ninth place during the past year. The 8-16-16 grade, which is a double strength

4-8-8, had the tenth largest tonnage in 1934. This really gives the 4-8-8 type fifth place as regards tonnage sold.

The following table shows how the tonnage sold in 1934 corresponds with the nine grades selected in 1931 by the New England agronomists.

NEW ENGLAND STANDARD NINE GRADES.	Tonnage.	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods.	Total.
5-8-7	13,455 ^a	4,603	18,058
4-8-4	8,562 ^b	159	8,721
4-8-10	2,318 ^c	18	2,336
7-6-6	1,415	84	1,499

2-12-4	69	8	77
5-8-10	797 ^e	19	816
2-8-10	84 ^f	-	84
Total	28,285	6,373	34,659

^a Including 109 tons of 10-16-14.

^b Including 111 tons of 5-10-5 and 53 tons of 15-30-15.

^c Including 8 tons of 8-16-20.

^d Including 17 tons of 10-5-10.

^e Including 35 tons of 10-16-20.

^f Including 16 tons of 4-16-20.

Of the total tonnage of mixed fertilizer sold in Massachusetts, 70 per cent was from grades recommended in 1931 by New England Agronomists to meet New England conditions, and 16 per cent additional tonnage was from grades varying but one per cent in one or more plant food elements from the grades thus recommended. Of the ten grades, including the multiple strength mixtures, that have the highest tonnage (34,345 tons), all but four were among the New England Standard Nine. These six grades showed a total tonnage of 27,627.

Nearly 18 per cent of the total tonnage of mixed fertilizer was from five grades not included in the New England Standard Nine. They are 4-8-7, third largest tonnage sold; 4-8-8, sixth largest; 4-12-4, ninth largest; 8-16-16, tenth largest; and 5-3-5, eleventh largest.

a Several analyses of the same brand have been averaged and recorded in the table as one analysis. Analyses of fertilizer left over from previous year not included.

Summary of Deficiencies in Mixed Fertilizers

	1932.	1933.	1934.
Brands deficient in one element	59	86	67
Brands deficient in two elements	9	6	7
Brands deficient in three elements	0	1	0
Brands deficient in nitrogen	18	16	22
Brands deficient in available phosphoric acid	27	41	22
Brands deficient in potash	32	44	37

Serious Commercial Shortages in Mixed Fertilizers

AMOUNT OF SHORTAGE PER TON.	NUMBER OF BRANDS ACCORDING TO YEARS.			
	1931.	1932.	1933.	1934.
More than \$5	2	none	1	1
Between \$4 and \$5	none	none	none	none
Between \$3 and \$4	1	2	none	none
Between \$2 and \$3	none	none	2	none
Between \$1 and \$2	3	2	1	1

Of the 260 brands analyzed, 186, or 72 per cent, showed no deficiencies. Out of 778 plant food guarantees made, 90 per cent were fully maintained.

The deficiency table shows the following statistics:

Deficiencies not exceeding $\frac{1}{4}$ of one per cent, 48.

Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of one per cent, 20.

Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of one per cent, 5.

Deficiencies more than $\frac{3}{4}$ of one per cent, 8.

Of the total number of guarantees of each element made, 8 per cent of the nitrogen, 8 per cent of the available phosphoric acid, and 14 per cent of the potash were not met. Thirteen of the 22 nitrogen deficiencies, 11 of the 22 available phosphoric acid deficiencies, and 24 of the 37 potash deficiencies did not exceed $\frac{1}{4}$ of one per cent.

There were 6 more shortages in nitrogen, 19 less in available phosphoric acid, and 7 less in potash, than in 1933.

Thirteen different firms have registered five or more brands of mixed fertilizer. Based upon composition found as well as upon tonnage sold, the above table shows to what extent each manufacturer was successful in guarding against deficiencies in plant food guarantee in his mixtures. All of the thirteen firms provided an overrun in all three of the plant food elements guaranteed. Two manufacturers, however, showed overruns in one element that were insufficient to safely care for accidental variations in the composition of the materials usually selected for use in fertilizer mixtures.

Explanation of Tables of Analyses.

Guarantee. The plant food guarantee or the grade of each fertilizer is made a part of the trade name under the heading "Name of Manufacturer, Brand and Grade," and is expressed as nitrogen, available phosphoric acid and water soluble potash and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1934, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

Mixtures Showing a Commercial Shortage of \$1 or More Per Ton.

Ground bone . . .	98	39	2.85	24.44 ^g	-	-	46.06	32.86	-
Ground tobacco stems . . .	1	1	2.28	.45 ^h	-	4.39 ^b	-	14.72	-
Cotton hull ashes . . .	3	3	-	2.34 ⁱ	-	36.68	56.69	51.51	6.75 (potash)
Wood ashes . . .	5	5	-	1.82 ^j	-	6.01	43.04	14.92	-
Pulverized sheep manure (k) . . .	48	20	1.68	1.37	-	3.22 ^b	49.03	8.44	-
Pulverized sheep and goat manure (k) . . .	21	7	1.34	1.13	-	2.85 ^b	38.41	6.99	-
Pulverized cattle manure (k) . . .	23	7	2.05	1.54	-	1.91 ^b	48.12	8.58	-
Pulverized poultry manure (k) . . .	8	2	4.76	2.72	-	1.32 ^b	55.65	16.70	-
Pulverized poultry manure and peat (k) . . .	4	3	3.09	3.15	-	1.59 ^b	44.50	12.60	-
Sheep manure and wool waste (k) . . .	3	2	1.68	.52	-	5.19 ^b	16.80	9.29	-

^a Also contains about 50% of calcium oxide in suitable form to neutralize soil acidity.

^b Total potash.

^c Chlorine 1.40%.

^d Magnesium oxide 11.39%, chlorine 1.85%.

^e Chlorine .22%.

^f Average tankage finer than 1/50 inch, 48.67%; coarser than 1/50 inch, 51.33%.

^g Average bone finer than 1/50 inch, 65.28%; coarser than 1/50 inch, 34.72%.

^h Organic matter 68.70%.

ⁱ Total potash 38.16%, calcium oxide 8.26%, magnesium oxide 3.85%, chlorine 3.90%, insoluble matter 7.56%.

^j Average calcium oxide 33.63%, magnesium oxide 3.94%, total potash 6.54%, water 9.54%, insoluble matter 8.08%.

^k Average organic matter: sheep manure, 41.76%; sheep and goat manure, 28.25%; cattle manure, 72.67%; poultry manure, 66.42%; poultry manure and peat, 67.72%; sheep manure and wool waste, 35.86%.

Nitrogen Compounds.

The chemicals and unmixed materials under this heading are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element; the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton are listed by themselves, serious deficiencies being emphasized by boldface type.

Stone Meal.

PLANT FOOD ELEMENTS.	MANUFACTURED BY MENDERTH, INC.			MANUFACTURED BY DONALD S. McCRILLIS.		
	Guaran- teed.	Found.		Guaran- teed.	Found.	
		Soluble in Dilute Hy- drochloric Acid.	By Fusion Method.		Soluble in Dilute Hy- drochloric Acid.	By Fusion Method.
Potassium oxide	3.00	1.47 ^a	3.12	3.00	.08 ^a	.91
Calcium oxide	3.00	1.98	2.41	.56	3.21	4.69
Magnesium oxide	2.00	2.14	2.54	2.00	3.55	3.69
Phosphoric acid13	.13	.20	.25	.26	.28

^a Menderth contained .055% and McCrillis Stone Meal .06% of potash soluble in water.

Note: The commercial value of the plant food contained in one ton of these Stone Meals, based upon their content of acid soluble potash, phosphoric acid, calcium and magnesium, would be about \$1.81 for Menderth and \$1.11 for the McCrillis Stone Meal.

Definitions and Interpretations Relating to Fertilizers.

The following definitions and interpretations have been adopted as official by vote of the Association of Official Agricultural Chemists at meetings held in 1932, 1933 and 1934.

The term **lime** shall not be used in the registration, labeling, or guaranteeing of fertilizers or fertilizer materials unless the lime is in a form to neutralize soil acidity (the oxide, hydroxide or carbonate, or equivalent magnesia compounds).

The weights appearing on packages of fertilizer, agricultural lime, and liming material shall always mean **net weights**.

Citrate-soluble ("reverted") phosphoric acid is that part of the total phosphoric acid in a fertilizer that is insoluble in water but soluble in a solution of citrate of ammonia according to the method adopted by the A. O. A. C.

Agricultural liming material is any substance that contains calcium and magnesium in condition and quantity suitable for use in neutralizing soil acidity.

Phosphate rock is a natural rock containing one or more calcium phosphate minerals of sufficient purity and quantity as to permit its use, either directly or after concentration, in the manufacture of commercial products.

Soft phosphate with colloidal clay is a very finely divided low-analysis by-product from mining Florida rock phosphate by a hydraulic process in which the colloidal material settles at points in artificial ponds and basins farthest from the washer, and is later removed after the natural evaporation of the water.

Precipitated bone phosphate is a by-product from the manufacture of glue from bones and is obtained by neutralizing the hydrochloric acid solution of processed bone with calcium hydroxide. The phosphoric acid is chiefly present as dicalcium phosphate.

Precipitated phosphate is a product consisting mainly of dicalcium phosphate obtained by neutralizing with calcium hydroxide the acid solution of either phosphate rock or processed bone.

"Basic" lime phosphate (lime based superphosphate) is a superphosphate to which liming materials have been added in a quantity at least six per cent (6%) calcium carbonate equivalents in excess of the quantity required to convert all water-soluble phosphate to the citrate-soluble form.

The word **lime** when applied to liming materials means either calcium oxide or calcium and magnesium oxides.

Mono-ammonium phosphate (fertilizer grade) is a commercial salt made by combining phosphoric acid with ammonia. It shall contain not less than ten per cent (10%) of nitrogen and not less than forty-six per cent (46%) of available phosphoric acid.

The term **phosphoric acid** designates P_2O_5 .

The term **potash** designates potassium oxide (K_2O).

As the terms **phosphoric acid** and **potash** are used universally in guaranteeing and in reporting the analyses of fertilizers it is recommended that the same terms also be used in reporting and discussing the results of analyses of related materials.

Acid and Basic Fertilizers.

Although acid forming and non-acid forming fertilizers have not been officially defined by the appropriate Committee of the Association of Official Agricultural Chemists of North America, yet at the 1934 meeting of the Association the tentative definitions which follow were submitted by the Committee:

Acid forming fertilizer is one which increases the permanent acidity of the soil immediately or when used over a period of years.

Non-acid forming fertilizer is one which does not increase the permanent acidity of the soil when used over a period of years.

Although a basic fertilizer was not defined by the Committee, yet there seems justification for the following definition:

A **basic fertilizer** is one which decreases the acidity of the soil upon which it is used.

During the past year considerable interest has developed, particularly in the Southern and Middle-Southern States and in New England, with reference to acid and basic fertilizers. That the question should be of greater interest in those sections of the country where good grades of limestone are not plentiful is but natural. In mixed commercial fertilizers, with the exception of some of the high-analysis mixtures, some form of conditioner or filler is usually necessary, in which case it would seem to be a better practice to use finely ground dolomite where this product can be secured at a low cost than to use some inert material for this purpose. The advantage of dolomite over a high-calcium product for this purpose is that it supplies the element magnesium in available form, and as certain sections of the country show unmistakable evidences of magnesium deficiency this is of considerable importance. Dolomite also has a higher acid-neutralizing value than high-calcium limestone and it does not revert the soluble and available phosphoric acid present in the mixed fertilizer.

In certain parts of the country where desirable lime products are available at a low cost and are therefore freely used for liming soils when needed, some other material of low cost, yet possessing some fertilizing value, might be preferable to ground limestone as a conditioner in fertilizers. Finely ground garbage tannage, finely ground rock phosphate, etc., are examples of such products. The fact should not be ignored that in many instances an acid-forming fertilizer is preferable to a basic mixture, and in general it may be said that an acid-forming fertilizer is not such a great problem to the farmer who has become accustomed to making direct lime applications to his soil when needed.

The subject has seemed of sufficient interest to Massachusetts agriculture to warrant a general survey of the reaction of fertilizers sold in the State during the seasons of 1933 and 1934. The tests of the fertilizers sold in 1933 were not made until early in 1934 after the 1933 fertilizer bulletin had been issued; the results are therefore given in the table which follows and furnish an interesting

comparison with similar results secured on fertilizers sold in 1934. The analytical results secured in this study were obtained by the use of the method developed by Professor W. H. Pierre of the West Virginia Agricultural Experiment Station. The Association of Official Agricultural Chemists have not adopted a method as official for this work although they have recognized its importance and the problem has been referred to the proper referee for cooperative study. The following table shows the extent to which the mixed fertilizer sold in Massachusetts during the years 1933 and 1934 contributed to soil acidity. It should be understood that some brands were found to be basic and some were acid. Those that were basic have been used to offset those that were acid in arriving at the net acidity for each year. Both types have been figured on the tonnage sold in the State, and the results given express both the acidity and basicity in terms of tons of carbonate of lime. The net acidity is arrived at by deducting the total basicity from the total acidity computed in terms of calcium carbonate. Data for each manufacturer's brands are on file and will be furnished to the appropriate manufacturer upon application.

Summary of Data on Acid and Basic Fertilizers.

FERTILIZER TONNAGE TESTED.			EXTENT OF ACIDITY OR BASICITY ON FERTILIZER TONNAGE SOLD, RESULTS EXPRESSED IN TONS OF CALCIUM CARBONATE (CaCO ₃).		
	1933.	1934.		1933.	1934.
Acid . . .	32,843	35,205	Acidity	5,112	4,812
Basic . . .	4,273	4,523	Basicity	453	149
Total . . .	37,116	39,728	Net acidity . . .	4,659	4,663

The above table indicates that ground dolomite or limestone is already being used in many fertilizer brands. An increase of 2,612 tons of mixed fertilizer in 1934 contributed about the same net acidity as was found in the fertilizer output for 1933.

MASSACHUSETTS LAW REGULATING THE SALE OF COMMERCIAL FERTILIZERS.

The law regulating the sale of commercial fertilizers in Massachusetts was revised in 1933. The full text of the law is given below, with the changes made in the revision indicated by italics.

(General Laws, 1920, Chapter 94, Section 1 and Sections 250 to 261, inclusive, as amended by Chapter 67, Acts of 1933.)

Definitions.

SECTION 1 (in part). The following words as used in this section and the other sections of this chapter to which their definition is hereinafter respectively limited, unless the context otherwise requires, shall have the following meanings:

"Agricultural lime", in sections two hundred and fifty to two hundred and sixty-one, inclusive, includes all the various forms of lime intended or sold for fertilizing purposes or for neutralizing soil acidity.

"Available phosphoric acid", in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, the sum of the *water-soluble and citrate-soluble phosphoric acid*.

"Brand", in sections two hundred and twenty-five to two hundred and thirty-five, inclusive, and two hundred and fifty to two hundred and sixty-one, inclusive, any commercial feeding stuff or cattle feed, and any commercial fertilizer, respectively, distinctive by reason of name, trade mark or guaranteed analysis, or by any method of marking.

"Commercial fertilizer", in sections two hundred and fifty to two hundred and sixty-one, inclusive, dried or partly dried manure, pulverized or ground, and each natural or artificial manure containing nitrogen, phosphoric acid, potash, *calcium oxide or magnesium oxide*, except the excrements and litter from domestic animals when sold in its natural state.

"Copy", in sections two hundred and twenty-five to two hundred and thirty-five, inclusive, and sections two hundred and fifty to two hundred and sixty-one, inclusive, any certified copy.

"Director", in sections twenty-five to thirty-one, inclusive, two hundred and twenty-seven to two hundred and thirty-five, inclusive, and two hundred and fifty-four to two hundred and sixty-one, inclusive, director of the Massachusetts Agricultural Experiment Station.

"Fertilizer", in sections two hundred and fifty to two hundred and sixty-one, inclusive, commercial fertilizer.

"Fertilizer grade", in sections two hundred and fifty to two hundred and sixty-one, inclusive, shall apply only to fertilizer mixtures and shall represent only the minimum guarantee of its plant food expressed in round numbers and in the following order: — nitrogen, available phosphoric acid and water-soluble potash.

"Gypsum or land plaster", in sections two hundred and fifty to two hundred and sixty-one, inclusive, crude calcium sulphate and may contain twenty per cent of combined water.

"Importer", in sections two hundred and twenty-five to two hundred and thirty-five, inclusive, and in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, a person procuring for sale or distribution in the commonwealth commercial feeding stuff or cattle feed, and commercial fertilizers, respectively, from another state or country.

"Label", in sections two hundred and twenty-five to two hundred and thirty-five, inclusive, a printed label required by section two hundred and twenty-five, and in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, a printed label required by section two hundred and fifty.

"Lime", in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, calcium oxide (CaO).

"Magnesia", in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, magnesium oxide (MgO).

"Package", in sections two hundred and twenty-five to two hundred and thirty-five, inclusive, two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, includes sack, bag, tin, box, jar, and any similar receptacle.

"Phosphoric Acid", in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, phosphoric anhydrid (P_2O_5).

"Potash", in sections two hundred and fifty to two hundred and fifty-four, inclusive, and two hundred and fifty-six to two hundred and sixty-one, inclusive, potassium oxide (K_2O).

Sale of Commercial Fertilizers regulated. Label, Form and Contents.

SECTION 250. No commercial fertilizer shall be sold or offered or exposed for sale without a plainly printed label accompanying it, displayed in the manner hereinafter set forth, and truly stating the following particulars:

1. The number of pounds of the fertilizer sold or offered or exposed for sale.
2. The name, brand or trade mark, *and in the case of fertilizer mixtures, the fertilizer grade* under which the fertilizer is sold, and, in the case of agricultural lime, its particular form.
3. The name and principal address of the manufacturer, importer or other person putting the fertilizer on the market in the commonwealth.
4. The minimum percentage of each of the following constituents which the fertilizer contains *and which, in case of fertilizer mixtures, shall be expressed in round numbers and in the following order:* (a) nitrogen, (b) available phosphoric acid, (c) potash soluble in distilled water; except that when undissolved bone, untreated phosphate rock, tankage, pulverized natural manures, the ground seeds of plants, or wood ashes are sold unmixed with other substances, the minimum percentage of total phosphoric acid therein may be stated in place of the percentage of available phosphoric acid; and except that in the case of agricultural lime the label shall truly state the following: (a) minimum and maximum percentage of total *calcium oxide*, (b) minimum and maximum percentage of total *magnesium oxide*, (c) minimum percentage of *calcium oxide* and *magnesium oxide* combined as carbonates, (d) and, in the case of *gypsum or land plaster, the minimum percentage of calcium oxide and of calcium sulphate.*
5. If any part of the nitrogen contained in the fertilizer is derived from pulverized leather, hair, wool waste, peat, garbage tankage, or from any inert material whatsoever, *unless processed so that its nitrogen shall show a satisfactory activity by the methods of the Association of Official Agricultural Chemists of North America*, the label shall truly state the specific materials from which such part of the nitrogen is derived.

When Label is to be affixed.

SECTION 251. When any fertilizer is sold or offered or exposed for sale in packages, the label shall be affixed in a conspicuous place on the outside thereof. When any fertilizer other than the product of gas houses, known as gas house lime, is offered or exposed for sale in bulk the label shall be affixed in a conspicuous place to the bin or other enclosure where the fertilizer is contained but need not state the number of pounds thereof, and when such fertilizer is sold in bulk the label shall be affixed in a conspicuous place to the vehicle in which the fertilizer is shipped or delivered, and shall state the number of pounds thereof. When any fertilizer is sold in packages furnished by the purchaser the seller shall furnish the labels therefor.

Certain Provisions of Label recognized as Guaranteed Analysis.

SECTION 252. The provisions of the printed label required under the two preceding sections relating to the constituents contained in any fertilizer shall be known and recognized as the guaranteed analysis of such fertilizer.

Sale of Certain Commercial Fertilizers forbidden.

SECTION 253. No person shall sell, offer or expose for sale a commercial fertilizer or brand of commercial fertilizer, any constituent part of which is of a smaller percentage than as stated on the label of said fertilizer, and no person shall sell, offer or expose for sale a fertilizer or brand thereof with a label which is untrue in any particular.

Sale of Commercial Fertilizers regulated. Fees, etc.

SECTION 254. No person shall sell or offer or expose for sale any commercial fertilizer until he has filed with the director a copy certified by him to be a true copy of the label required by section two hundred and fifty, excepting as to the item as to the number of pounds, for each brand of fertilizer to be sold, offered or exposed for sale and has paid to the said director an analysis fee for each brand aforesaid as follows: eight dollars for nitrogen, eight dollars for phosphoric acid, eight dollars for potash, contained or stated to be contained in any such brand of fertilizer, *eight dollars for magnesium oxide when guaranteed in any such brand of fertilizer*, and twelve dollars for each brand of agricultural lime *and gypsum* except gas house lime; nor unless he holds a valid and uncanceled certificate issued under section two hundred and fifty-six. Any person desiring in any year to sell or to offer or expose for sale any brand of commercial fertilizer in respect of which the requirements of this section as to the filing of a copy of the label thereof and the payment of the analysis fee therefor have not been complied with before January first of said year, may offer or expose for sale and sell the said brand upon filing a certified copy of the label thereof and paying the full analysis fee therefor. No person shall be obliged to file a copy of the label of, or to pay an analysis fee for, any brand of fertilizer for which a certified copy of the label has been filed and the analysis fee paid by the manufacturer or importer of such brand.

No person shall file with the director a false copy of the label of any fertilizer or brand of fertilizer.

Same Subject. Statement, Permit, Fee.

SECTION 255. In addition to the requirements of the preceding section, each person who sells or offers or exposes for sale any commercial fertilizer shall, on or before January first and July first in each year, file with the director a sworn statement in such form as he prescribes setting forth the number of net tons of fertilizer sold by him in the commonwealth during the preceding six months, stating in each case the number of tons of each brand sold, together with a permit allowing the director or his authorized deputy to examine the books of the person filing the statement, for the purpose of verifying the same, and shall thereupon pay to the director a fee of six cents a ton of two thousand pounds for the fertilizers so sold; except that no such statement, permit or fee shall be required in respect of agricultural lime *and gypsum*. The director or his authorized deputy may cancel the certificate for any brand of fertilizer in respect to which the requirements of this section have not been complied with. Whoever sells, offers or exposes for sale a fertilizer or brand of fertilizer without having filed the statement and permit and paid the fee required by this section shall be punished by a fine of not more than five hundred dollars. But no person shall be obliged to file a statement or permit, or to pay the fee required by this section, for any brand of fertilizer for which the statement and permit have been filed and for which the fee has been paid by the manufacturer or importer of such brand.

Certificate of Filing of Label, etc. Issue, Revocation, etc. Penalty for Sale, etc., if Certificate not issued, etc.

SECTION 256. When the certified copy of the label of any brand of fertilizer has been filed, and the proper fees have been paid, the director shall issue a certificate to that effect; and the certificate shall authorize the sale, in compliance with sections two hundred and fifty to two hundred and sixty-one, inclusive, of the brand of fertilizer for which the certificate is issued, up to and including December thirty-first of the year for which it is issued. The said director or his authorized deputy may refuse to issue a certificate for any fertilizer or brand of fertilizer which

does not contain at least one half of one per cent of nitrogen, or one half of one per cent of potash soluble in distilled water, or one per cent of phosphoric acid, or five per cent of *calcium oxide*, or five per cent of *magnesium oxide*, or which contains its potash, phosphoric acid, *calcium or magnesium oxides* in forms substantially insoluble by the methods of analysis for commercial fertilizers and *agricultural lime products* prescribed by the Association of Official Agricultural Chemists of North America, or which does not possess substantial properties as a fertilizer. The director or his authorized deputy may also refuse to issue a certificate for any fertilizer under a name, brand or trade mark which is untrue in any particular, or which, in his opinion, would be misleading or deceptive in any particular, or would tend to mislead or deceive as to the constituents or properties of said fertilizer, and may refuse to issue more than one certificate for any fertilizer under the same name or brand, or to issue a certificate for any fertilizer under a name or brand to the use of which the person seeking it is not lawfully entitled. If a certificate is issued for any fertilizer and it is afterward discovered that the certificate itself, or the granting of it, or the manner of procuring it, was in any respect in violation of any provision of sections two hundred and fifty to two hundred and sixty-one, inclusive, the director or his authorized deputy may cancel the certificate. Whoever sells, offers, or exposes for sale any fertilizer or brand of fertilizer for which no certificate has been issued by the director or his authorized deputy, or the certificate for which has been cancelled, shall be punished by a fine of not more than two hundred dollars.

Annual Analysis. Publication of Reports, etc. Free Analysis.

SECTION 257. Each commercial fertilizer and brand of commercial fertilizer sold or offered or exposed for sale shall be subject to analysis by the director or by his duly designated deputy. The said director shall make or cause to be made in each year one or more analyses of each fertilizer and brand of fertilizer sold or offered or exposed for sale in the commonwealth, and shall collect the annual analysis fee provided for by section two hundred and fifty-four; and he, his inspectors and deputies, may enter upon any premises where any commercial fertilizer is sold or offered or exposed for sale to ascertain if sections two hundred and fifty to two hundred and sixty-one, inclusive, are complied with, and to take samples for analysis. The analysis of all fertilizers shall be made by the methods adopted by the Association of Official Agricultural Chemists of North America. The said director may publish or cause to be published in reports, bulletins, special circulars or otherwise, the results obtained by said analyses. Said publications shall also contain such additional information in relation to the character, composition, value and use of the fertilizers analyzed as the director sees fit to include. He may make or cause to be made for any person a free analysis of any commercial fertilizer or brand of commercial fertilizer sold or offered or exposed for sale in the commonwealth, but he shall not be obliged to make such free analysis, or to cause the same to be made, unless the samples therefor are taken and submitted in accordance with the rules and regulations which he prescribes. The results of any analysis made in accordance with the aforesaid sections, except a free analysis as aforesaid, shall be sent by the director to the person named in the printed label of the fertilizer analyzed at least fifteen days before any publication of such results.

Taking of Samples for Analysis regulated.

SECTION 258. Each sample of commercial fertilizer taken for analysis shall be of not less than substantially *two pounds* in weight, and each sample shall be taken, whenever the circumstances conveniently permit, in the presence of the

person selling or offering or exposing for sale the fertilizer sampled, or of a representative of such person. Broken packages shall not be sampled, and all samples shall be taken *by means of a sampling tube so designed as to remove a core extending from the top to the bottom of the package*, from substantially ten per cent of the fertilizer to be sampled, except that if fertilizer is sold or offered or exposed for sale in bulk ten single samples shall be taken from as many different portions of the lot. *An unbroken package of fertilizer, not exceeding twenty-five pounds, may, upon tendering the market price, be taken for the purpose of analysis and the contents thereof shall constitute a suitable and legal sample for said purpose.* All samples taken shall be thoroughly mixed and divided into two nearly equal samples, placed in suitable vessels, and marked and sealed. Both shall be retained by the director, but one shall be held intact by him for one year at the disposal of the person named in the label of the fertilizer sampled.

Disposition of Fees, etc.

SECTION 259. All fees for analysis, or otherwise, under any provision of sections two hundred and fifty to two hundred and sixty-one, inclusive, shall be collected by the director and paid to the commonwealth.

Rules and Regulations. Complaints.

SECTION 260. The director shall enforce sections two hundred and fifty to two hundred and sixty-one, inclusive, and may prescribe and enforce such rules and regulations as to the sale of commercial fertilizers as he deems necessary to enforce said sections, and may prosecute or cause to be prosecuted any person violating any provision of said sections. No complaint based upon an analysis of samples shall be made for any violation of any provision of said sections if samples are taken otherwise than as provided therein. No complaint shall be made for the failure of any fertilizer or brand of fertilizer to meet the guaranteed analysis thereof if the analysis made by the director of such fertilizer or brand shows the amounts of its constituents to be substantially equivalent to the percentages stated in the label.

Penalty for Hindering, etc., Director, etc.

SECTION 261. Whoever hinders or obstructs the director, his inspector, or deputy, in the discharge of any authority or duty conferred or imposed by any provision of sections two hundred and fifty to two hundred and sixty-one, inclusive, and except as otherwise provided in section two hundred and fifty-six, whoever violates any provision of sections two hundred and fifty to two hundred and fifty-four, inclusive, shall be punished by a fine of not less than fifty nor more than two hundred dollars.

Recent Rulings and Regulations.

Certain fertilizer materials, such as nitrate of soda and potash salts, have in the past been registered by the importers. This is supposed to relieve the fertilizer manufacturer, who may be the retail distributor, from this obligation. Unfortunately, however, in some instances, particularly with nitrate of soda, there is but little cooperation between the importer and manufacturer to see that lots which are sold in the unmixed condition are properly branded as provided by law. In most of the cases that have come to our notice the fault has been with the importer, who has made shipment direct to the local distributor on order from the manufacturer but has neglected to attach the label to each package. The manufacturer who took the order may not have seen the material at any time during the transaction. In other cases the manufacturer may have

made the delivery from stock purchased for mixing purposes and attached his own shipping tags in place of the tags which should have been supplied by the importer who had registered.

Due to this imperfect cooperation on the part of a few importers and distributors, the following regulations have been adopted:

I. The law requires that a label must be displayed on every package of fertilizer before it is offered for sale. In the absence of the label required by law, the distributor or agent who sells the fertilizer at retail must either register the product in his name, in which case he is at liberty to use his own tags, or he must refrain from making a single delivery of the product until he has secured proper tags from the importer and has attached them to the fertilizer.

II. The only tags or markings permissible in the retail distribution of any commercial fertilizer, other than those furnished by the registrant, shall be simple shipping tags which shall give only the name and address of the distributor and consumer.

The above rulings include cottonseed meal sold or used as a fertilizer. Inquiry should therefore be made at this office as to whether any particular brand has been duly registered as a fertilizer by the shipper before it is offered for sale as a source of plant food.

Inspection of Commercial
Feedstuffs

By Phillip H. Smith

This is the fortieth report of feeding stuffs inspection and presents the results of the chemical and microscopic analyses on 1641 samples of feeding stuffs intended for live stock and poultry consumption, collected during the year ending September 1, 1934.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

During the past year 1,070 brands of feed have been registered for sale by 223 manufacturers and dealers; 1,641 samples of feeding stuffs have been collected and subjected to analysis; 176 dealers located in 104 towns and cities have been visited by the feed inspector at least once.

Of the 1,641 samples of feeding stuffs collected, only 96, or 5.9 per cent, were found to be one per cent or more below their protein and fat guarantee, or more than one per cent over the guarantee for fiber and in no case to such an extent as to materially affect their feeding value.

Especial attention should be called to feeding oatmeal, a by-product which finds considerable favor as a food for poultry. In most instances the samples of Alpine feeding oatmeal collected carried from 20 to 30 per cent of cereal other than oats and one shipment was found to contain so much white corn meal that it was subjected to seizure by the Federal authorities. It is quite possible that this admixture of other cereal was not, with the exception of added corn in one instance, a direct attempt at adulteration but rather due to the fact that oats which had not been properly separated from other cereals, dirt, and chaff were hulled and the resulting material ground and sold as feeding oatmeal.

Several samples of ground oats showed an exceptionally high fiber content. These were shipped by Farmers' Service Bureau and Hood Mills Co., of Baltimore, Maryland, both subsidiary companies of Frederick Obrecht & Son of that city. Three samples contained 15.64, 16.20 and 15.15 per cent of fiber. Other samples collected from this source were more nearly normal in fiber content. The average fiber content of 61 samples of ground oats collected during the year was 11 per cent. While it is possible to find oats which carry as high a fiber content as the samples in question, they must be considered as inferior in feeding value.

A number of samples of ground oats showed a liberal admixture of barley and wheat. While Federal standards allow for an admixture of other cereals in certain grades, the mere grinding of "barley mixed oats" does not change the product into "pure ground oats". The quality and grade of whole oats can be determined in a general way by their appearance, which cannot be done when they are finely ground. In justice to the purchaser ground oats should be identified by a tag showing the grade of oats from which they are ground.

Three samples of ground corn and oats (provender) were found to contain approximately as much fiber as ground oats alone. A mixture of corn and oats ground together in equal parts by weight should contain not more than 7 per cent of fiber. A higher percentage of fiber places the product under the

¹The following staff members assisted in the inspection: Albert F. Spelman and John W. Kuzmeski, Chemists; Frederick A. McLaughlin, Microscopist; James T. Howard, Inspector; Cora B. Grover, Clerk.

suspicion either that it may be adulterated with oat hulls or that a very inferior grade of oats has been used. One lot sold as Elmore "Special" corn and oats was found to contain 12.6 per cent of fiber. A sample of oats from which this material was made was found to contain 16.8 per cent fiber and in reality consisted very largely of oat cleanings. To many the word "special" conveys the meaning of something superior and when used with a product of this sort must be considered a misnomer.

The Massachusetts Feeding Stuffs Act provides that "each package, lot or parcel of commercial feeding stuff sold, offered, exposed or kept for sale or distributed shall have affixed thereto *in a conspicuous place a tag or label containing a legible and plainly printed statement*" of certain information as set forth in the Act. This has been construed to allow this guarantee to be printed directly on the sack or on an attached tag. It has become the general custom where a tag is used to attach it by sewing when the bag is sewed up by machine. Where the stitches pass through the printed matter the tag cannot be considered legible. It is suggested that the printed matter on the tag be so spaced as to allow for sewing without destroying legibility.

The demand for the examination of special feeds for dogs, game reared in captivity, rabbits and foxes is increasing. Whether or not such work comes within our scope depends upon the definition of the terms "for feeding live stock and poultry" as used in the Act. This wording of the Act should be changed so as to be more explicit in its meaning or a ruling obtained to define more clearly what kinds of animals and birds may be considered as being live stock or poultry.

The moisture content of feeds as given in this bulletin is that obtained at the time the feeds are analyzed. It is probably true that small inspector's samples will dry out to some extent between the time of sampling and analysis and that feeds as found in dealers' stocks will contain a slightly higher water content than reported. The difference is not great, however, and cannot be easily avoided.

Certified Ingredients

Allied Mills, Inc.

Empire 20% Dairy Ration

Corn distillers' dried grains, brewers' dried grains, soybean oil meal, corn gluten feed, corn gluten meal, cottonseed oil meal, corn meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 1% ground limestone and 1% salt.

Empire Egg Mash

Dried buttermilk, dried skim milk, meat scraps, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn meal, fine ground oats, 1% ground limestone and 1% salt.

Empire Egg Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn meal, fine ground oats, 1% ground limestone, 1% salt and sardine oil.

Wayne Amco 20% Dairy Ration

Cottonseed oil meal, brewers' dried grains, corn distillers' dried grains, ground oats, corn gluten feed, corn meal, soybean oil meal, corn gluten meal, old process linseed oil meal, wheat bran, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Wayne Breeder Mash

Fish meal, meat scraps, dried buttermilk, dried skim milk, soybean oil meal, choice alfalfa meal, wheat bran, corn meal, corn germ oil meal, wheat standard middlings, fine ground oats, crab meal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat bran, corn meal, fine ground oat meal, corn gluten feed, choice alfalfa meal, soybean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Mash Concentrate

Dried buttermilk, dried skim milk, fish meal, peanut oil meal, meat scraps, soybean oil meal, corn gluten meal, corn gluten feed, choice alfalfa meal, 4% ground limestone, 0.15% iron oxide, 0.002% potassium iodide and 0.5% salt.

Wayne 20% National Dairy Ration

Corn gluten feed, cottonseed oil meal, wheat bran, corn meal, ground oats, corn distillers' dried grains, soybean oil meal, old process linseed oil meal, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

A. P. Ames Co.

Ames Egg Mash with Cod Liver Oil

Dried milk, corn meal, wheat bran, wheat middlings, ground oat groats, meat scraps, fish meal, alfalfa meal, calcium carbonate, salt and cod liver oil.

Ames Growing Mash, with and without Cod Liver Oil

Dried milk, oat meal, ground oats, corn meal, wheat bran, wheat middlings, meat scraps, fish meal, alfalfa meal, calcium carbonate, salt.

20% Balanced Ration

Corn meal, hominy, wheat bran, wheat middlings, reground oat feed with molasses, gluten feed, linseed meal, cottonseed meal, calcium carbonate, salt, bone meal.

Anchor Mills

Zip Egg Mash

Buttermilk, fishmeal, meat scrap, bonemeal, soybean meal, corn gluten feed, ground oats, alfalfa meal, wheat bran, standard wheat middlings, cornmeal, calcium carbonate, salt.

Arcady Farms Milling Co.

Arcady Besbet Laying Mash

Fish meal, meat scraps, animal liver meal, soy bean meal, corn gluten meal, dried buttermilk, o. p. linseed oil meal, oat meal, corn meal, corn gluten feed, alfalfa meal, fine ground oats, wheat bran, wheat middlings, cod liver oil, bone meal, 1/2% calcium carbonate from limestone, 1/2 of 1% salt.

Arcady 24% Open Formula Production Ration

Wheat bran, hominy feed, o. p. linseed oil meal, ground oats, corn gluten feed, cottonseed meal, corn gluten meal, cane molasses, bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady 20% Open Formula Production Ration

Wheat bran, hominy feed, o. p. linseed oil meal, ground oats, corn gluten feed, cottonseed meal, corn gluten meal, cane molasses, bone meal, 1% calcium carbonate from limestone, 1% salt.

Old Colony Feed

Cottonseed meal, soy bean meal, hominy feed, corn gluten feed, o. p. linseed oil meal, distillers' dried grains from corn, dried beet pulp, wheat bran, wheat middlings, 1% calcium carbonate from limestone, 1/2 of 1% salt.

Peerless Milk Ration

Cottonseed meal, soy bean meal, corn gluten meal, o. p. linseed oil meal, corn gluten feed, wheat bran, distillers dried grains from corn, dried grains from barley, malt and corn, cleaned ground and bolted wheat screenings, ground and bolted clipped oat by-product, molasses, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

E. W. Bailey & Co.

Capital Dairy Ration

Corn gluten feed, linseed oil meal, hominy feed, 43% cottonseed meal, ground oats, wheat bran, corn meal, edible bone meal, calcium carbonate and fine salt.

Sweetened Favorite Dairy Ration

White hominy feed, cottonseed meal, linseed oil meal, corn meal, ground oats, wheat bran, corn gluten feed, wheat middlings, edible bone meal, calcium carbonate, fine salt and molasses.

Barber & Bennett, Inc.

Double Value 20% Dairy

Corn gluten feed, cottonseed meal — choice, wheat bran (may contain mill run screenings), hominy feed and corn meal, corn distillers' dried grains, soybean oil meal, coconut oil meal, molasses — cane, bone meal — steamed, salt.

Double Value Growing Mash

Wheat bran (may contain mill run screenings), wheat flour middlings, corn meal, fine ground low fiber oats, alfalfa meal — low fiber, meat scraps — 55%, fish meal, salt, cod liver oil reinforced in vitamin D.

Beacon Milling Co., Inc.

Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soy bean oil meal, ground oats, corn meal, ground grain screenings, cottonseed meal, wheat bran, ground barley, brewer's dried grains, corn distiller's dried grains, molasses, 1% salt, 1% calcium carbonate, 1% calcium phosphate.

Beacon Breeders Mash with Buttermilk

Dried skimmilk, dried buttermilk, meat scrap, fish meal, alfalfa leaf meal, corn meal, pulverized heavy oats, pulverized heavy barley, corn gluten meal, wheat bran, wheat middlings, soy bean oil meal, old process linseed oil meal, anti-rachitic oil, $\frac{1}{2}$ % fine salt, 3% calcium carbonate, 1% calcium phosphate, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals.) (Wheat bran or middlings may contain mill run screenings.)

Beacon Broiler Feed

Dried skimmilk, meat scrap, fish meal, ground corn, pulverized heavy oats, pulverized heavy barley, wheat bran (may contain mill run screenings), soy bean oil meal, wheat red dog, alfalfa leaf meal, anti-rachitic oil, $\frac{1}{2}$ % salt, 2% calcium carbonate, 1% calcium phosphate.

Beacon's Cayuga Growing Mash

Dried skimmilk, fish meal, meat scraps, old process linseed oil meal, soy bean oil meal, pulverized heavy oats, corn meal, pulverized heavy barley, wheat bran, wheat middlings, alfalfa leaf meal, anti-rachitic oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon's Cayuga Laying Mash with Buttermilk

Dried buttermilk, dried skimmilk, fish meal, meat scrap, corn meal, alfalfa leaf meal, wheat bran, wheat middlings, soy bean oil meal, pulverized heavy barley, corn gluten meal, pulverized heavy oats, anti-rachitic oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt (Wheat bran or middlings may contain mill run screenings.)

Beacon's Chariot Starter and Grower Containing Cod Liver Oil

Dried skimmilk, fish meal, meat scrap, old process linseed oil meal, pulverized heavy oats, corn meal, pulverized barley, wheat bran, wheat middlings, alfalfa leaf meal, 2% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt.

Beacon Complete Starting Ration

Dried skimmilk, meat scrap, fish meal, ground corn, ground hulled oats, pulverized heavy oats, pulverized heavy barley, wheat bran (may contain mill run screenings), old process linseed oil meal, wheat red dog flour, alfalfa leaf meal, anti-rachitic oil, 2 $\frac{1}{2}$ % calcium carbonate, $\frac{3}{4}$ % calcium phosphate, $\frac{1}{2}$ % salt.

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, alfalfa meal, wheat bran, wheat middlings, 1% calcium carbonate, 1% calcium phosphate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Egg Mash with Buttermilk

Dried buttermilk, dried skimmilk, meat scrap, fish meal, corn gluten meal, soy bean oil meal, old process linseed oil meal, pulverized heavy barley, pulverized heavy oats, corn meal, alfalfa leaf meal, wheat bran, wheat middlings, anti-rachitic oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % fine salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals.) (Wheat bran or middlings may contain mill run screenings.)

Beacon Fleshing Mash and Crate Fattener

Dried skimmilk, pulverized heavy oats, ground oat groats, pulverized heavy barley, wheat low grade flour, corn meal, corn oil meal, rolled oats, old process linseed oil meal, anti-rachitic oil, 1 $\frac{1}{2}$ % calcium carbonate, $\frac{1}{2}$ % calcium phosphate, 1% salt.

Beacon Growing Mash

Dried skim milk, meat scrap, fish meal, old process linseed oil meal, soy bean oil meal, pulverized heavy oats, pulverized heavy barley, corn meal, wheat red dog, alfalfa leaf meal, wheat bran, wheat middlings, anti-rachitic oil, 3% calcium carbonate, 1% calcium phosphate, $\frac{1}{2}$ % salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewer's dried grains, corn distiller's dried grains, wheat bran (may contain mill run screenings), ground oats, ground barley, molasses, 1% salt, 1% calcium carbonate.

Beacon "20"

Old process linseed oil meal, cottonseed meal, soy bean oil meal, corn gluten feed, corn gluten meal, corn meal, wheat bran (may contain mill run screenings), corn distiller's dried grains, ground oats, ground barley, 1% salt, 1% calcium phosphate, 1% calcium carbonate.

Beacon Sweet "20"

Old process linseed oil meal, soy bean oil meal, corn distiller's dried grains, cottonseed meal, wheat bran, wheat middlings, brewer's dried grains, corn gluten meal, corn gluten feed, ground barley, corn meal, ground oats, molasses, 1% calcium carbonate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Turkey Growing Feed

Dried skim milk, alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, meat scrap, fish meal, wheat bran, wheat middlings, wheat red dog flour, pulverized heavy oats, pulverized heavy barley, corn meal, anti-rachitic oil, 3% calcium carbonate, 1% calcium phosphate $\frac{1}{2}$ % salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals.) (Wheat bran or middlings may contain mill run screenings.)

Berkshire Coal and Grain Co., Inc.**Berkshire Hills Sweet Dairy Feed**

Wheat bran, cottonseed meal, rye midds, corn gluten feed, linseed oil meal, corn meal, ground oats, calcium carbonate, molasses and salt.

Green Mountain Dairy Ration

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats and barley, calcium carbonate, salt.

Green Mountain Laying Mash

Wheat bran, wheat middlings, linseed oil meal, corn meal, fine ground oats, alfalfa meal, meat scraps, bone meal, fish meal, dried skim milk, calcium carbonate, salt, tested cod liver oil.

Black Rock Milling Corp.**Bidwell 20% Dairy Ration**

Wheat bran, linseed oil meal, malt sprouts, gluten feed, gluten meal, ground barley, cottonseed meal, fine ground grain screenings, molasses, calcium carbonate and salt.

Bidwell Dry-Mash

Dried buttermilk, alfalfa meal, corn meal, wheat bran, wheat middlings, fish meal, meat, bone, linseed oil meal, gluten meal, soy bean meal, calcium carbonate, salt and ground: wheat, barley, kaffir corn and buckwheat.

Bidwell Dry-Mash with Cod Liver Oil

Dried buttermilk, vitamin tested cod liver oil, alfalfa meal, corn meal, wheat bran, wheat middlings, fish meal, meat, bone, linseed oil meal, gluten meal, soy bean meal, calcium carbonate, salt and ground: wheat, barley, kaffir corn and buckwheat.

Borden Grain Co.**Borden's Dairy Feed**

Wheat bran, wheat middlings, corn meal or hominy, gluten meal, cotton seed meal, gluten feed, linseed oil meal, calcium carbonate, bonemeal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oatmeal, dried milk, cod liver oil, alfalfa leaf meal, fish meal, meat scrap, calcium carbonate, salt.

George B. Brown**Brown's Dairy Feed**

Wheat bran, hominy feed, oat feed, cotton seed meal, calcium carbonate, corn meal, o. p. linseed meal, corn gluten feed, molasses, bone meal and salt.

Brown's Egg Mash

Corn meal, wheat midds, ground oats, wheat bran, meat scraps, bone meal, dried milk, leaf alfalfa meal, charcoal, calcium carbonate, salt, cod liver oil.

Coles Co.**Fortune Egg Mash with Dried Buttermilk**

Ground corn, wheat, oats, barley, kaffir corn, buckwheat, alfalfa, wheat bran, wheat flour midds, old process linseed meal, corn gluten feed, corn germ meal, hominy, dried buttermilk, fish meal, bone and meat meal, calcium carbonate, 1% salt. (Wheat bran and wheat middlings may contain screenings not to exceed mill run.)

Community Feed Stores, Inc.

Community Chick Mash (Starter-Grower-Broiler)

Hominy or corn meal, pulverized oats, bran, middlings, red dog middlings, beef scraps, alfalfa meal, dried milk, bone meal, cod liver meal, cod liver oil, fish meal, salt.

Community-20 Dairy Ration

Corn distillers dried grains, cottonseed meal 41%, linseed meal, gluten feed, hominy or corn meal, ground oats, bran, middlings, molasses, calcium carbonate, salt.

Community Milk Laying Mash

Yellow hominy or corn meal, ground oats, bran, gluten feed, middlings, meat scraps, dried milk, alfalfa meal, salt, calcium carbonate, cod liver meal, cod liver oil.

Hilltop-20 Dairy Ration

Cottonseed meal 41%, linseed meal, gluten feed, hominy or corn meal, Vim Feed (oat feed), bran, middlings, calcium carbonate, salt, molasses.

Nicolas Courcy Grain Co.

Courcy's Dairy Feed

Bran, middlings, Buffalo gluten, Diamond gluten, 41% cottonseed, 34% linseed, meal or hominy, salt, calcite flour.

Courcy's Eastern Laying Mash

Meal, wheat bran, wheat middlings, feeding oat meal, alfalfa leaf meal, dry skim milk, 50% scrap, fish meal, bone meal, fine salt, calcite flour, with 1% cod liver oil or without.

Courcy's Growing Feed

Wheat bran, middlings, yellow corn meal, feeding oat meal, 50% scraps, linseed oil meal, bone meal, fish meal, calcite flour, leaf meal, milk, salt, with 1% cod liver oil or without.

Eastern Starting Feed

Wheat bran, wheat middlings, yellow corn meal, feeding oat meal, bone meal, dry skim milk, leaf meal, fish meal, 60% scraps, cracked wheat, hulled oats, fine salt, calcite flour, with 1% cod liver oil or without.

Cover & Palm Co.

The Perfect Dry Mash

Alfalfa meal, hominy feed, corn meal, wheat bran, wheat middlings, gluten feed, linseed meal, meat scraps, ground oats, kafir corn meal, salt, dried skim milk, calcium carbonate.

E. A. Cowee Co.

Coweco Growing Mash

Wheat bran, wheat middlings, corn meal, oat meal, soya bean meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Laying Mash

Wheat bran, wheat middlings, oat meal, gluten feed, soya bean meal, linseed oil meal, meat scraps, fish meal, corn meal, dried milk, alfalfa leaf meal, edible bone meal, calcium carbonate, salt, with or without cane molasses, with or without cod liver oil.

Coweco Lo-Price 20% Dairy Ration

Bran, middlings, ground oats, cottonseed meal, corn meal, gluten meal, linseed meal, ground barley, soya bean meal, cane molasses, bone meal, calcium carbonate and salt.

Coweco 1925 Ration

Wheat bran and middlings, corn meal, cottonseed meal, gluten feed, linseed oil meal, hominy, ground oats, distillers' grains, brewers' grains, soya bean meal, edible bone meal, salt, calcium carbonate and molasses.

Coweco 20% Ration

Wheat bran and middlings, gluten feed, corn meal, distillers' grains, linseed meal, soya bean meal, ground oats, cottonseed meal, brewers' grains, molasses, edible bone meal, calcium carbonate and salt.

Coweco Sunrise 20% Dairy Ration

Wheat bran and middlings, brewers' grains, gluten, distillers' grains, ground cleanings from corn, oats, wheat and barley, cottonseed meal, molasses, calcium carbonate, salt.

Coweco Sunrise Laying Mash

Wheat bran, wheat middlings, corn meal, hominy, ground oats, gluten, soya bean meal, meat scraps, alfalfa meal, edible bone meal, calcium carbonate, salt, with or without cod liver oil.

Curley Brothers

Crystal All Grain Starting Food

Pure dry buttermilk, cod liver oil, yellow corn meal, ground oat groats, red dog flour, bran, alfalfa leaf meal, cracked wheat, fine cracked corn, steelcut oatmeal, steamed edible bone meal powdered charcoal, salt, calcium carbonate, white fish meal.

Crystal 24% Dairy Ration

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers grains, hominy feed, ground barley, ground oats, bran and middlings with mill run of screenings, edible bone meal, salt, calcium carbonate.

Crystal 20% Dairy Ration

Corn gluten feed, yellow corn meal, hominy feed, bran and middlings with mill run of screenings, cottonseed meal, linseed oil meal, beet pulp, steamed edible bone meal, calcium carbonate, salt.

Crystal Egg Mash

Linseed oil meal, yellow hominy feed, yellow corn meal, bran and middlings, with mill run of screenings, feeding oatmeal, red dog, alfalfa poultry greens, meat scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash

Cod liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran and middlings with mill run of screenings, feeding oatmeal, yellow hominy feed, yellow corn meal, calcium carbonate, salt.

Delaware Mills, Inc.**Delco 24% Dairy Feed**

Linseed oil meal, corn gluten feed, corn gluten meal, peanut oil meal, cottonseed meal, wheat bran (which may contain mill run screenings), wheat middlings, corn meal, phosphatic calcium carbonate, salt.

Delco 20% Dairy Feed

Dried beet pulp, linseed oil meal, corn gluten feed, corn gluten meal, peanut oil meal, cottonseed meal, wheat bran, wheat middlings, hominy feed, ground oats, salt, phosphatic calcium carbonate.

Delco Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, corn gluten meal, cottonseed meal, soya bean oil meal, peanut oil meal, wheat bran, wheat middlings, hominy feed, ground oats, ground barley, phosphatic calcium carbonate, salt.

Indian Laying Mash (with Dried Skim Milk)

Dried skim milk, meat scrap, fish meal, bone meal, soya bean oil meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt.

Frank Diauto**Diauto Broiler Ration**

Yellow meal, bran, wheat flour middlings, oat groats, skim milk, alfalfa leaf meal, 60% meat scraps, fish meal 55%, cod liver oil, calcium carbonate, salt.

Diauto's Chick Starter

Corn meal, flour middlings, bran, feed oat meal, meat scraps 60%, dried skim milk, fish meal, alfalfa leaf meal, oyster shell meal, salt.

Diauto's Dairy Feed

Gluten feed, corn meal, ground oats, bran, linseed meal, cotton seed meal, salt.

Diauto's Fancy Chick Growing Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps 60%, dried skimmed milk, fish meal 50%, alfalfa leaf meal, ground oyster shells, common salt.

Diauto's Special Egg Mash with Cod Liver Oil

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps 60%, dried skimmed milk, fish meal 50%, alfalfa leaf meal, ground oyster shells, common salt.

F. Diehl & Son, Inc.**Diehl's Dairy Feed**

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, Banner Feed, bone, dried milk, charcoal, fish scraps, gluten feed, linseed meal, meat scraps, middlings and red dog.

Dietrich & Gambrell, Inc.**All Mash Starter & Grower**

Corn meal, oat meal, wheat middlings, alfalfa leaf meal, malt flour, peanut meal, fish meal, dried buttermilk, cod liver oil, bone meal, 1% calcium carbonate, 1% salt.

D. & G. All Mash Laying Ration

Wheat, wheat, ground corn, pulverized oats, wheat flour middlings, wheat bran, alfalfa leaf meal, dried milk, fish meal, meat scrap, bone meal, soy bean meal, calcium carbonate, salt.

D. & G. Dairy Feed

Cottonseed meal, peanut meal, linseed meal, gluten feed, corn feed meal, wheat bran, ground grain screenings, clipped oat by-products, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt.

Frederick Growing Mash

Wheat middlings, wheat bran, pulverized oats, corn feed meal, gluten feed, meat scrap, dried buttermilk, alfalfa leaf meal, bone meal, 1% calcium carbonate, 1% salt.

Frederick Laying Mash

Wheat bran, wheat middlings, corn feed meal, pulverized oats, gluten meal, meat scrap, fish meal, alfalfa meal, cottonseed meal, bone meal, 1% calcium carbonate, 1% salt, dried buttermilk.

Gambrill's A. I. Dairy Feed

Gluten Feed, cottonseed meal, linseed meal, peanut meal, dried brewers grains, wheat bran, corn feed meal, wheat middlings, ground oats, molasses, 1% calcium carbonate, 1% bone meal, 1% salt.

Gambrill's 16% Dairy Feed

Cottonseed meal, peanut meal, gluten feed, wheat bran, corn feed meal, ground grain screenings from wheat, clipped oat by-products, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt.

Pen Mar Dairy Feed

Gluten feed, cottonseed meal, linseed meal, peanut meal, dried brewers grains, ground oats, corn feed meal, wheat bran, wheat middlings, molasses, 1% calcium carbonate, 1% bone meal, 1% salt.

Eastern States Farmers' Exchange**Eastern States Combination Mash**

E. S. yellow corn meal — attrition, wheat bran (may contain mill run screenings), wheat flour middlings, E. S. pure ground oats, dry skim milk, alfalfa leaf meal, E. S. meat scraps 50%, pure fish meal 55%, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Controller Mash

Dry skim milk, E. S. yellow corn meal — attrition, wheat bran (may contain mill run screenings), ground oat groats, oyster shell meal, salt, dicalcium phosphate, sardine oil.

Eastern States Fattener Mash

E. S. yellow corn meal — attrition, corn oil meal, ground oat groats, dry skim milk, standard middlings, wheat red dog, E. S. pure ground oats, soy bean oil meal, salt.

Eastern States Fulpail Dairy Ration

Yellow hominy feed, wheat bran (may contain mill run wheat screenings), distillers' corn dried grains, corn gluten feed, 41 per cent cottonseed meal prime quality, 41 per cent protein soybean oil meal, cane molasses, E. S. ground oats, dicalcium phosphate, salt.

Eastern States Milkmore Dairy Ration

41 per cent protein cottonseed meal prime quality, corn gluten feed, wheat bran (may contain mill run wheat screenings), distillers' corn dried grains, 41 per cent protein soybean oil meal, yellow hominy feed, cane molasses, E. S. ground oats, dicalcium phosphate, salt.

Eastern States Producer 20 (Open Formula)

E. S. yellow corn meal — attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. meat scraps 50%, E. S. pure ground oats, alfalfa leaf meal, dry skim milk, pure fish meal 55%, soy bean oil meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Producer Mash

E. S. yellow corn meal — attrition, wheat bran (may contain mill run screenings), wheat flour middlings, E. S. pure ground oats, E. S. meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, dry skim milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Sixteen Dairy Ration

Yellow hominy feed, wheat bran (may contain mill run wheat screenings), distillers' corn dried grains, corn gluten feed, cane molasses, E. S. ground oats, 41 per cent protein cottonseed meal prime quality, 41 per cent protein soybean oil meal, dicalcium phosphate, salt.

Eastern States Starting and Broiler Ration

E. S. yellow corn meal — attrition, wheat bran (may contain mill run screenings), wheat flour middlings, ground oats groats, dry skim milk, alfalfa leaf meal, E. S. meat scraps 50%, pure fish meal 55%, oyster shell meal, salt, sardine oil, dicalcium phosphate.

Eastern States 32% Supplement Feed

E. S. choice cottonseed meal, corn gluten meal, soy bean oil meal, corn distillers' dried grains, molasses, old process linseed oil meal — pure, wheat bran (may contain mill run screenings), dried brewers' grains, dicalcium phosphate, salt.

Eastern States Turkey-Fat

E. S. yellow corn meal — attrition, standard wheat bran, wheat flour middlings, ground oat groats, dry skim milk, E. S. meat scraps 50%, alfalfa leaf meal, oyster shell meal, dicalcium phosphate, salt.

Eastern States Turkey-Grow

E. S. yellow corn meal — attrition, wheat bran (may contain mill run screenings), wheat flour middlings, ground oat groats, E. S. meat scraps 50%, dry skim milk, alfalfa leaf meal, pure fish meal 55%, sardine oil, oyster shell meal, dicalcium phosphate, salt.

Michael W. Ellis

The Ellis Dairy Feed

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers' grains, cottonseed meal, oil meal, ground oats, calcite flour, salt, edible bone meal. (Wheat feeds may contain screenings not exceeding mill run).

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten feed, corn meal, rolled oats or feeding oat-meal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal, calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.

Elmore Chixsaver

Dried skim milk, wheat flour midds, wheat bran, corn meal, alfalfa leaf meal, oat flour, meat and bone meal, fish meal, cod liver oil, fine table salt.

Elmore Complete Laying Ration

Meat and bone meal, fish meal, whole oat groats, corn meal, ground wheat, alfalfa leaf meal, wheat bran, wheat middlings, dried skim milk, cod liver oil, calcium carbonate, salt.

Elmore Egg Mash

20% Dried buttermilk and meat scraps, 2nd clear wheat flour, pure ground oats, wheat middlings, alfalfa leaf meal, corn meal or hominy feed, wheat bran, cod liver oil, not more than 1% calcium carbonate, salt, fish meal.

Elmore Growing Mash

Dried buttermilk, meat meal, bone meal, wheat midds, wheat bran, low grade wheat flour, alfalfa leaf meal, corn meal, oat flake, gluten feed, salt, cod liver oil, fish meal.

Elmore Milk Grains

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers grains, calcium carbonate, salt, soybean oil meal.

Elmore Milk Grains Junior

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, calcium carbonate, salt, soybean oil meal.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cottonseed meal, wheat bran, coconut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Elmore Turkey Growing Mash

Alfalfa leaf meal, wheat bran, corn meal, wheat middlings, soybean oil meal, meat and bone meal, cod liver oil, dried skim milk, $\frac{1}{2}$ of 1% salt.

Emco Feed

Wheat bran, wheat midds, linseed oil meal, beet pulp, corn gluten feed, corn meal or hominy feed, cotton seed meal, calcium carbonate, salt.

Granger 24% Dairy Ration

Wheat bran, wheat middlings, cotton seed meal, ground whole barley, soybean meal, corn gluten feed, cane molasses, reground wheat screenings, calcium carbonate, salt.

Granger 20% Dairy Ration

Wheat bran, wheat midds, ground barley, cottonseed meal, corn gluten meal, corn meal or hominy feed, soybean meal, cane molasses, reground wheat screenings, calcium carbonate, salt.

John W. Eshelman & Sons

Eshelman Certified 20% Dairy Ration

Corn gluten feed, choice hominy feed, pure ground 38 lb. No. 2 white clipped oats, 34% o. p. oil meal, standard wheat bran, 41% pro. cottonseed meal, soybean oil meal, standard wheat middlings, corn distillers' dried grains, cane molasses, steamed bone meal, calcium carbonate salt.

Eshelman Challenge Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, dried brewers grains, corn distillers grains, corn meal, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Conestoga 20 Dairy Feed

Cottonseed meal, wheat bran, cane molasses, corn gluten feed, dried brewers grains, corn distillers grains, soybean oil meal, o. p. oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Golden Rod 25 Dairy Feed

Cottonseed meal, wheat bran, ground oats, corn gluten feed, dried brewers grains, corn gluten meal, corn meal, corn distillers grains, soybean oil meal, o. p. oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, cottonseed meal, ground oats, corn gluten feed, cane molasses, dried brewers grains, corn distillers grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Pennsy 16 Dairy Feed

Wheat bran, cottonseed meal, cane molasses, corn gluten feed, dried brewers grains, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, oat meal mill by-product (oat midds, oat hulls, oat shorts), 1% bone meal, 1% salt, 1% calcium carbonate.

Eshelman Pennsy Laying Mash

Corn meal, wheat middlings, meat scrap, wheat bran, ground oats, alfalfa meal, soybean oil meal, fish meal, corn gluten feed, 2% o. p. oil meal, 1% calcium carbonate, $\frac{1}{2}$ % salt.

Eshelman Red Rose All Mash Starter

Corn meal, wheat bran, wheat middlings, pure oat meal, meat scrap, fish meal, alfalfa leaf meal, dried buttermilk, 2% o. p. oil meal, 2% calcium carbonate, 1¼% bone meal, ¼% salt, ¼% fortified cod liver oil.

Eshelman Red Rose 24 Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, dried brewers grains, corn distillers grains, corn meal, o. p. oil meal, soybean oil meal, 1% bonemeal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Laying Mash

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o. p. oil meal, fish meal, hominy feed, 3% fine alfalfa meal, 3% dried buttermilk, 1% calcium carbonate, ½% salt.

Farm Service Stores, Inc.**Big C Growing Mash**

Corn feed meal (or yellow hominy), wheat feed, ground oats, meat scraps, dried skim (or dried buttermilk), fish scraps, fine ground alfalfa, calcium carbonate, ½% salt, cod liver oil.

Big C Mash

Corn feed meal (or yellow hominy), heavy mixed feed, gluten feed, old process oil meal, 45% meat scraps, fine ground alfalfa, ground oats, bone meal, calcium carbonate, ½% salt.

Big C Special Dairy Feed

Cottonseed meal, old process oil meal, hominy or corn meal, corn gluten feed, wheat bran, wheat midds, ground oats, 1% salt, 1% steamed bone meal, calcium carbonate.

Diamond A Dairy Feed

Corn feed meal (or yellow hominy), old process oil meal, corn gluten feed, wheat bran, dried brewers grains, corn gluten meal, cottonseed meal, stock feed, 1% salt, 1% calcium carbonate.

Diamond C Dairy Feed

Wheat bran, wheat midds, corn meal (or yellow hominy), cottonseed meal, old process oil meal, beet pulp, gluten feed, gluten meal, salt.

Narragansett Indian Egg Mash

Dried skim, or dried buttermilk, meat scraps, wheat midds, yellow corn meal, or yellow hominy, wheat bran, corn gluten feed, ground oats, hulled barley, ground oat blowings, old process oil meal, ground alfalfa meal, fish meal, ground calcite, salt.

Narragansett Indian Growing Mash

Dried skim, or dried buttermilk, 45% meat scraps, fish meal, wheat midds, second clear flour, corn feed meal or hominy, wheat bran, corn gluten feed, ground oats, ground barley, hulled barley, old process oil meal, alfalfa meal, salt, bone meal, calcite flour, fine charcoal.

New England Dairy Ration

Diamond gluten meal, Buffalo gluten feed, wheat bran, yellow corn meal or yellow hominy, old process oil meal, cottonseed meal, Sugared Vim Feed, ground limestone, salt.

Quality Chick Starter

Wheat bran, wheat midds, corn meal (or yellow hominy), feeding oatmeal, bone and meat meal, fish meal, dried skim or dried buttermilk, alfalfa meal, old process oil meal, calcium carbonate, with or without cod liver oil.

Quality 26% Dairy Feed

Wheat midds, red dog, corn feed meal (or yellow hominy), ground oats, soybean meal, brewers grains, C & O feed, wheat bran, gluten feed, cottonseed meal, old process oil meal, cane molasses, calcium carbonate 1%, bone meal 1%, salt 1%.

Vigor 16% Dairy Feed

Corn feed meal, soy bean meal, brewers grains, C & O feed, wheat bran, gluten feed, cottonseed meal, old process oil meal, oat feed, cane molasses, calcium carbonate 1%, bone meal 1%, salt 1%, wheat midds, red dog.

Flory Milling Co., Inc.**Flory's Dairy Feed**

Cottonseed meal, o. p. oil meal, coconut oil meal, soybean meal, corn gluten feed, corn gluten meal, dried malt grains, alfalfa meal, standard wheat bran, standard wheat middlings, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), buckwheat middlings.

Flory's Egg Mash

Ground oat groats, dried skim milk, milk sugar feed or dried whey (feeding), wheat flour middlings, yellow corn meal, corn gluten meal, wheat bran, dried tomato pulp, ground barley, beef scrap, fish meal, crab meal, alfalfa leaf meal, o. p. oil meal, coconut oil meal, buckwheat middlings, soybean meal, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Record Dairy Feed

O. p. oil meal, cottonseed meal, soybean meal, corn gluten feed, buckwheat middlings, standard wheat middlings, standard wheat bran, dried malt grains, ground oats, molasses, alfalfa meal, coconut oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Fred A. Fountain

Fountain's Buttermilk Growing Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, table salt.

Fountain's Buttermilk Laying Mash

Dry buttermilk or dry skim milk, beef scrap, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, fish meal, table salt.

Fountain's Buttermilk Starting Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, calcium carbonate, table salt.

Dean S. French

Special Mash or Poultry Feed

Wheat feed, corn meal, gluten feed, alfalfa meal, linseed meal, meat scraps, ground oats, ground bone, charcoal, dried milk, salt, cod liver oil.

Paul Fuller & Sons

Fuller's Eggmaker Mash

Dried skim milk, soy bean meal, alfalfa leaf meal, fine ground oats, feeding oat meal, red dog flour, meat scraps 45%, corn meal, standard wheat bran, gluten, calcium carbonate, salt, fish meal.

J. B. Garland & Son

Garland's Economy 20% Dairy Ration

Bran, middlings, meal, cottonseed meal, gluten feed, linseed meal, ground barley, dried brewers grains, soy bean meal, distillers grains, cocoanut oil meal, malt sprouts, bone meal, calcium carbonate, cane molasses and salt.

Garland's Economy Egg Mash

Wheat bran and middlings, corn meal, hominy, soy bean meal, gluten meal, feeding oatmeal, dried milk, beef scraps, ground alfalfa, cod liver oil, calcium carbonate, bone meal and salt.

Garland's Fancy Chick Mash

Wheat bran and middlings, oat meal, corn meal, alfalfa leaf meal, meat scraps, bone meal, fish meal, dried milk, soy bean meal, calcium carbonate, salt and cod liver oil. (With or without cane molasses.)

Garland's Laying Mash

Wheat bran and middlings, corn meal, gluten meal, oat meal, alfalfa, soy bean meal, meat scraps, fish meal, dried milk, calcium carbonate, salt, bone meal. (With or without cod liver oil.) (With or without cane molasses.)

Garland's 24% Ration

Wheat bran and middlings, corn meal, hominy, gluten feed, linseed meal, cottonseed meal, soy bean meal, cocoanut oil meal, ground oats, brewers grains, distillers grains, bone meal, calcium carbonate, salt and cane molasses.

Royal Worcester Complete Ration

Gluten feed, linseed, ground oats, wheat bran, middlings, corn meal, cottonseed meal, soy bean meal, beet pulp, salt, calcium carbonate, bone meal and cane molasses.

General Mills, Inc.

Eventually Gold Medal Chick Ration

Wheat bran, wheat standard middlings, yellow corn meal, ground oat groats, alfalfa meal, meat and bone scraps, dried skim milk, dried buttermilk, ground limestone 2¼%, salt ½%, cod liver oil extract.

Eventually Gold Medal Dairy Ration

Wheat bran, wheat standard middlings, ground oats, yellow corn meal, corn gluten feed, cottonseed meal, linseed oil meal, ground limestone 2¾%, salt ¾%.

Eventually Gold Medal Egg Mash for Breeding and Laying with Dried Buttermilk

Wheat bran, wheat standard middlings, yellow corn meal, ground oats, alfalfa meal, meat and bone scraps, dried skim milk, dried buttermilk, ground limestone 3%, salt 1%, cod liver oil extract.

W. K. Gilmore & Sons, Inc.

Conference Mash with Cod Liver Oil

Yellow corn meal, standard wheat bran, wheat flour middlings, pure ground oats, meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, milk, calcite flour, cod liver oil, dicalcium phosphate, salt.

Neponset Poultry Mash

Wheat bran, wheat middlings, corn meal, ground oats, alfalfa, beef scraps, fish scraps, linseed oil meal, corn gluten feed, ground rolled oats, calcite flour, dried skim milk, fine salt.

Goode Grain Co.

Complete All Mash Starting and Broiler Feed, U. S. D. A. Formula

Corn meal, middlings, bran, meat scraps, fish meal, milk dried, alfalfa leaf meal, ground oyster shells or calcium carbonate, salt, 1% cod liver oil.

D. H. Grandin Milling Co.

Grandin's Baby Chick Starter with Buttermilk— Cod Liver Oil

Dried buttermilk, fine ground hulled oats, ground wheat, corn meal, hominy feed, wheat middlings, alfalfa leaf meal, calcium carbonate, bone meal, one half of one per cent salt, and cod liver oil.

Grandin's 24% Balanced Dairy Ration

Distillers dried grains, cottonseed meal, coconut oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Complete Starting Ration with Buttermilk — Cod Liver Oil

Dried buttermilk, cod liver oil, ground meat and bone, fish meal, wheat bran, wheat middlings alfalfa leaf meal, hominy feed, ground yellow corn, pulverized oats, ground wheat, ground hulled oats, ground barley, calcium carbonate and salt.

Grandin's Sweetened 24% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 20% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 16% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground barley, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Complete Laying Ration

Dried buttermilk, concentrated cod liver oil, ground meat and bone, fish meal, corn gluten meal, alfalfa meal, ground yellow corn, hominy feed, ground wheat, pulverized barley, pulverized oats, wheat bran, wheat middlings, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Growing Mash with Buttermilk

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Growing Mash with Buttermilk — Cod Liver Oil

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate, salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate and a small percentage of salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk — Cod Liver Oil

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate, a small percentage of salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Milk Maker

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, beet pulp, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's 12 Twin Six 12 Dairy Feed

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, alfalfa meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

M-S (Money-Saver) 20% Sweet Dairy Feed

Cottonseed meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground grain screenings, oat meal mill by-products (oat middlings, oat hulls, oat shorts), cane molasses, steamed bone meal, calcium carbonate and salt.

Hales & Hunter Co.

Red Comb Egg Mash with Dried Buttermilk

Whole ground corn, feeding oat meal, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean meal, pulverized oats, fish meal, cod liver oil, sardine oil, dried buttermilk and not over 5% minerals (calcium carbonate, sodium chloride, steamed bone meal, granulated charcoal, iron sulphate, sulphur.)

D. Harbeck

Welcome Dairy Feed

Bran, beet pulp, cottonseed meal, corn gluten meal, ground oats, hominy or corn feed meal, oil meal, middlings, steamed bone meal 1%, salt 1%.

D. B. Hodgkins' Sons

Hodgkins' Dairy Ration

Wheat bran, hominy, ground oats, corn gluten feed, corn meal, cottonseed meal, soy bean meal, linseed meal, brewers grains, molasses, calcium carbonate and salt.

Hodgkins' Poultry Mash

Ground corn, oats, middlings and bran (with screenings not to exceed mill run), corn gluten feed, linseed meal, ground meat scraps, calcium carbonate, dried skim milk, dairy salt, fish meal, dried buttermilk, alfalfa leaf meal and charcoal, also with cod liver oil.

Horvitz Grain Co.

Make-M-Lay Laying Mash

Wheat bran, corn meal, gluten feed and gluten meal, ground oats, ground barley, red dog, wheat middlings, linseed meal, meat scraps, calcium carbonate, charcoal.

Wantmore 24% Dairy Ration Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten, ground barley, corn meal, cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Wantmore Dairy Ration

Hominy feed or corn meal, wheat bran, ground oats, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, calcium carbonate, salt.

Wantmore Dairy with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, calcium carbonate.

Wantmore 20% Dairy Ration Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten, ground barley, corn meal, cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Jaquith & Co.

Jaquith & Co. Dairy Ration

Wheat bran and middlings, c. s. meal, oil meal, soya bean meal, salt, gluten feed, alfalfa, ground oats, corn, dried grains, molasses.

Jaquith & Co. Growing Mash

Ground corn, wheat and oats, soy bean meal, meat and bone meal, salt, buttermilk, alfalfa, Nopco XX cod liver oil, oil meal, shell meal.

Jaquith & Co. Laying Mash

Ground corn, wheat and oats, gluten feed, oil meal, meat scraps, buttermilk, soy bean meal, alfalfa meal, salt, Nopco XX cod liver oil, shell meal.

Jersee Co.

Just Right 20 Dairy Ration

Old process linseed oil meal, choice cottonseed meal, choice yellow hominy, corn gluten feed, pure wheat bran, Diamond gluten meal, pure ground oats, 1% calcium phosphate, 1% salt.

Just Right Egg Mash

Standard middlings, standard bran, corn meal, corn gluten feed, fine ground oats, meat scraps, fish meal, charcoal, calcium carbonate (limestone), alfalfa meal, powdered whole and skim milk, St. John's bread (locust bean meal), starch, milk sugar, wheat red dog, oxide iron, di-calcium phosphate, anise, dried blood, iodized salt, yeast, cod liver oil.

Just Right Growing Mash

Standard middlings, feeding oat meal, corn meal, alfalfa meal, meat scraps, fish meal, bone meal, charcoal, calcium carbonate (limestone), powdered whole and skim milk, St. John's bread, starch, milk sugar, wheat red dog, oxide iron, di-calcium phosphate, anise, dried blood, iodized salt, yeast, cod liver oil.

Larrowe Milling Co.

Larro — The Ready Ration for Dairy Cows

Yellow corn meal, cottonseed meal, standard wheat middlings, o. p. linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, ¾% salt.

Larro Chick Starter

Yellow corn meal, ground oat groats, wheat standard middlings, wheat bran, meat and bone scraps, dried buttermilk, dried skimmed milk, alfalfa meal, 1¾% limestone, ½% salt, cod liver oil extract.

Larro Egg Mash

Wheat bran, wheat standard middlings, yellow corn meal, meat and bone scraps, ground barley, soybean oil meal, ground oats, alfalfa meal, dried skimmed milk, dried buttermilk, 2½% limestone, ½% salt, cod liver oil extract.

Larro Growing Mash

Yellow corn meal, wheat standard middlings, wheat bran, meat and bone scraps, alfalfa meal, ground oats, dried buttermilk, dried skimmed milk, soybean oil meal, 2% limestone, ½% salt, cod liver oil extract.

Mansfield Milling Co.**"Mansfield" Chick-Growing Feed**

Wheat bran, red dog flour, corn meal, oat meal, fish scraps, meat scraps, dried milk and charcoal.

"Mansfield" Cow-Ration

Wheat bran, corn meal, ground oats, ground barley, cottonseed meal, linseed meal, gluten feed, gluten meal and salt.

"Mansfield" Dry-Poultry Mash

Wheat bran, wheat middlings, red dog flour, corn meal, gluten feed, dried milk and meat scraps.

Maritime Milling Co., Inc.**Sweetened B B Bull Brand "24" Dairy Ration**

Dried brewers grains, o. p. linseed oil meal, cotton seed meal, corn gluten feed, soya bean oil meal, hominy feed, corn meal, wheat bran, wheat middlings, molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

B B Bull Brand Growing Mash Vitamized with Cod Liver Oil, Milk Sugar Feed, Dried Buttermilk

Cod liver oil, milk sugar feed, dried buttermilk, alfalfa leaf meal, wheat bran, wheat middlings, ground wheat, corn meal, pulverized oats, ground oat meal, soya bean oil meal, meat meal, fish meal, steamed bone meal, calcium carbonate and salt.

B B Hi-Test Dairy Feed 20% Pro. Sweetened

Dried brewers grains, o. p. linseed oil meal, cotton seed meal, corn gluten feed, soya bean oil meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B B Marmico 16% Protein Dairy Feed with Molasses

Dried brewers grains, soya bean oil meal, cotton seed meal, corn gluten feed, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, oat hulls, oat shorts, oat midds, molasses, steamed bone meal, calcium carbonate and salt.

B B Red-E-Mixt Egg Mash with Dried Buttermilk

Dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, fish meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain mill run of ground screenings.)

B B Red-E-Mixt Egg Mash Vitamized with Cod Liver Oil and Dried Buttermilk

Cod liver oil, dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, fish meal, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain mill run of ground screenings.)

Sweetened Dollar \$ Maker 24% Pro. Dairy Feed

Dried brewers grains, soya bean oil meal, corn gluten feed, o. p. linseed oil meal, cotton seed meal, corn meal, hominy feed, wheat bran, ground oats, molasses, calcium carbonate, salt and steamed bone meal. (Wheat bran may contain ground screenings not exceeding mill run.)

Sweetened Dollar \$ Maker 20% Pro. Dairy Feed

Dried brewers grains, soya bean oil meal, corn gluten feed, o. p. linseed oil meal, cotton seed meal, corn meal, hominy feed, wheat bran, ground oats, molasses, calcium carbonate, salt and steamed bone meal. (Wheat bran may contain ground screenings not exceeding mill run.)

Dollar \$ Maker Egg Mash

Dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Dollar \$ Maker Egg Mash Vitamized with Cod Liver Oil and Dried Buttermilk

Cod liver oil, dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Dollar \$ Maker Growing Mash Vitamized with Cod Liver Oil and Dried Buttermilk

Cod liver oil, dried buttermilk, wheat bran, wheat middlings, soya bean oil meal, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Matheson Vail Co.**Mavco Laying Mash**

Coarse corn meal, wheat bran, wheat middlings, ground oats, meat scraps 50%, fish meal 50%, dried skim milk, salt, alfalfa leaf meal, ground oyster shells, cod liver oil.

Mavco Starting and Growing Mash

Coarse corn meal, wheat bran, wheat middlings, ground oats, meat scraps 50%, dried skim milk, fish meal 50%, alfalfa leaf meal, calcium carbonate, salt, cod liver oil.

Geo. Q. Moon & Co., Inc.

Moon's Baby Chick Starter Mash

Roller corn meal, wheat middlings, Moon's white wheat middlings, fine ground alfalfa meal, meat scrap, bone meal, dried buttermilk, calcium carbonate, calcium phosphate, cod liver oil, $\frac{1}{2}$ of 1% salt, wheat bran, dried skim milk.

Moon's 24% Dairy Ration

Corn distillers grain, o. p. oil meal, corn gluten meal, cottonseed meal, corn gluten feed, wheat middlings and wheat bran (with ground screenings not to exceed mill run), dried brewers grains, calcium carbonate, $\frac{3}{4}$ of 1% salt, corn meal, soy bean meal, molasses.

Moon's 20% Dairy Feed with Molasses

O. p. oil meal, corn gluten meal, cottonseed meal, wheat bran and wheat middlings (with ground screenings not to exceed mill run), dried brewers grains, cleaned, ground and bolted wheat screenings, ground and bolted clipped oat by-product, molasses, corn gluten feed, calcium carbonate, $\frac{1}{2}$ of 1% salt, soy bean meal.

Moon's Growing Mash

Wheat bran, Moon's white wheat middlings, roller corn meal, fine ground alfalfa meal, meat scrap, bone meal, dried buttermilk, calcium carbonate, calcium phosphate, dried skim milk, cod liver oil.

Moon's Laying Mash with Dried Buttermilk

Wheat bran (with ground screenings not to exceed mill run), Moon's pure white wheat middlings, roller process corn meal, ground oats, fine ground pea green alfalfa meal, beef scrap, dried buttermilk, ground barley, ground buckwheat, calcium carbonate, calcium phosphate, corn gluten meal.

Open Formula Dairy Ration

Standard wheat bran, choice yellow hominy, pure ground oats (No. 2 38# clipped-unsul.), corn gluten feed, choice cottonseed meal, soy bean meal, o. p. linseed oil meal — pure, corn dist. dried grains, molasses, dicalcium phosphate, salt.

Special A Dairy 20% Ration

Corn gluten feed, cottonseed meal, oil meal, wheat bran, hominy, dried brewers grains, ground barley, calcium carbonate, calcium phosphate, $\frac{1}{2}$ of 1% salt, soy bean meal.

Moon's Special A Laying Mash with Dried Buttermilk

Meat scrap, alfalfa meal, standard wheat middlings (with ground screenings not to exceed mill run), corn meal, ground barley, ground oats, ground buckwheat, calcium carbonate, calcium phosphate, $\frac{1}{2}$ of 1% salt, dried buttermilk, corn gluten meal.

Moon's X Dairy Ration

Corn gluten feed, corn gluten meal, soy bean meal, cottonseed meal, wheat middlings, oil meal, molasses, cleaned, ground and bolted wheat screenings, ground and bolted clipped oat by-product, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Ogden Grain Co.

Good Value Laying Mash

Pulverized 36/38 No. 2 oats, meat scraps, fish meal, alfalfa leaf meal, No. 2 yellow corn meal, standard wheat bran, wheat flour middlings, dried skim milk, calcium carbonate, salt, cod liver oil.

Good Value 24% Thrift Dairy Ration

Soyabean oil meal, old process linseed oil meal, gluten meal, corn meal, low fiber ground oats, cotton seed meal, standard wheat bran, standard wheat middlings, ground wheat screenings, molasses, calcium carbonate and salt.

Good Value 20% Thrift Dairy Ration

Soyabean oil meal, old process linseed oil meal, gluten meal, corn meal, low fiber ground oats, cotton seed meal, standard wheat bran, standard wheat middlings, ground wheat screenings, molasses, calcium carbonate and salt.

Good Value Thrift Laying Mash

Pulverized 38/40 No. 2 oats, meat scraps, dried skim milk, No. 2 yellow corn meal, gluten meal, standard wheat bran, standard wheat middlings, fish meal, calcium carbonate, salt, cod liver oil.

Good Value Thrift Starting and Growing Mash

Corn meal, standard wheat bran, pulverized oats, flour middlings, dried skim milk, alfalfa meal, fish meal, meat scraps, calcium carbonate, salt, cod liver oil.

Park & Pollard Co.

All-In-One Laying Mash

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, Iodol fish meal, meat and bone meal, linseed oil meal, soya bean meal, wheat bran, wheat middlings, ground: yellow corn, oats, wheat, barley, calcium carbonate and salt.

Bet-R-Milk 20% Ration

Corn gluten feed, linseed oil meal, cottonseed meal, malt sprouts, wheat bran, wheat middlings, hominy feed, Iodol fish meal, molasses, calcium carbonate, salt, corn distillers grains.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground corn, wheat, oats, barley, kaffir corn, buckwheat.

Lay or Bust Dry-Mash with Cod Liver Oil

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Manamar Complete Ration

Kelp, Pacific Coast fish meal and marine sea shells, meat scrap, pure wheat bran; wheat middlings, alfalfa meal, ground yellow corn, ground oats, vitamin tested cod liver oil.

Manamar 24% Dairy Ration

Kelp, Pacific Coast fish meal and marine sea shells, corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, brewers dried grains, malt sprouts, corn gluten meal, copra oil meal, corn meal, molasses, calcium carbonate and salt.

Manamar Lay or Bust Mash

Kelp, Pacific Coast fish meal and marine sea shells, dried buttermilk, meat scrap, alfalfa meal, pure wheat bran, wheat middlings, ground yellow corn, ground oats, vitamin tested cod liver oil.

Milk-Maid 24% Sweetened Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, brewers dried grains, malt sprouts, corn gluten meal, copra oil meal, corn meal, Iodol fish meal, molasses, calcium carbonate, and salt.

Park & Pollard Growing Feed

Dried buttermilk, alfalfa leaf meal, Iodol fish meal, linseed oil meal, meat and bone meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley.

Park & Pollard Growing Feed with Cod Liver Oil

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, linseed oil meal, Iodol fish meal, meat and bone meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley.

Top Notch 16% Ration

Corn distillers grains, ground barley, linseed oil meal, cottonseed meal, malt sprouts, fine ground grain screenings, molasses, calcium carbonate and salt.

Yankee Dairy Ration

Corn gluten feed, cottonseed meal, wheat bran, wheat middlings, corn gluten meal, linseed oil meal, ground oats, corn meal, brewers grains, molasses, calcium carbonate and salt.

George H. Parker Grain Co.**Parker's Egg Mash**

Yellow corn meal, wheat bran, wheat midds, ground oats, feeding oat meal, dried skimmed milk, meat scraps, fish meal, alfalfa leaf meal, edible bone meal, calcium carbonate, charcoal, vitamin tested cod liver oil and salt.

Parker's Special Dairy Ration

Wheat bran, yellow corn meal, hominy, old process linseed meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, steamed bone meal and salt.

W. N. Potter Grain Stores, Inc.**Potter's Sweetened Dairy Ration**

Gluten feed, hominy, linseed oilmeal, ground oats, wheat bran, std. wheat middlings, cotton seed meal, corn distillers grains, molasses, calcium carbonate, bone meal and salt.

H. C. Puffer Co.**Egg-Em-On Growing Feed**

Corn feed meal, corn gluten feed, ground barley, ground oats, wheat bran, wheat middlings, meat scraps, dried milk, alfalfa meal.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings (not exceeding mill run of screenings), corn feed meal, corn gluten feed, ground oats, linseed meal, alfalfa meal, small percentage salt and calcium carbonate.

Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, ground oats, corn feed meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Sweetened Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, corn feed meal, wheat bran and wheat middlings (not exceeding mill run of screenings), oat feed, molasses, small percentage salt and calcium carbonate.

Quaker Oats Co.**Quaker 24% Protein Dairy Ration**

Hominy feed, yellow hominy feed, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker 20% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley meal, cottonseed meal, corn gluten feed, linseed meal, wheat bran, wheat middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker 16% Protein Dairy Ration

Hominy feed, yellow hominy feed, cottonseed meal, linseed meal, gluten feed, wheat bran, wheat middlings, ground grain screenings from wheat, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% ground limestone, molasses.

Quaker Ful-O-Pep Chick Starter

Oatmeal, yellow hominy feed, wheat bran, wheat middlings, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Growing Mash

Oatmeal, yellow hominy feed, wheat bran, wheat middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Ralston Purina Co.**Purina Blue Checker Cow Chow (20%)**

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings, (standard) wheat bran, corn meal, alfalfa meal, molasses, 1% iodized salt.

Purina Breeder Egg Chowder

Dried buttermilk, cod liver oil, sardine oil, alfalfa meal, meat scrap, soy bean oil meal, linseed meal, corn germ meal, wheat middlings, wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Bulky Cow Chow

Linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings, (standard) wheat bran, corn meal, alfalfa meal, dried beet pulp, molasses, 1% iodized salt.

Purina Chick Startena (Complete — All Mash)

Dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, $1\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Chicken Fatena

Ground oats, ground corn, corn germ meal, wheat flour (second clear), grey wheat middlings, ground barley, linseed meal, rolled oats, $\frac{1}{2}$ % iodized salt, $1\frac{1}{2}$ % calcium carbonate (limestone).

Purina Egg Chowder

Meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, wheat middlings, wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Turkey Growing and Fattening Chow

Meat scrap, soy bean oil meal, alfalfa meal, corn meal, wheat middlings, wheat bran, molasses, $\frac{1}{2}$ % iodized salt.

Ryther & Warren**Blue Tag Dairy Ration**

41% cottonseed meal, old process linseed oil meal, corn gluten feed, white hominy, standard bran, standard middlings, ground oats, dried beet pulp, calcium carbonate 1 per cent and salt $\frac{1}{2}$ of 1 per cent.

Minot Chick Mash, Starting and Growing Feed

Yellow corn meal, wheat bran, flour middlings, ground oat meal, meat scraps, 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, Nopco XX cod liver oil.

Minot Milk Egg Mash

Yellow corn meal, wheat bran, flour middlings, ground 40-lb. oats, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, Nopco XX cod liver oil.

Minot Poultry Mash (Plain)

Wheat bran, wheat middlings, red dog middlings, corn meal, gluten feed, alfalfa meal, ground oats, meat scraps, fish meal and $\frac{1}{2}$ of 1 per cent of salt.

St. Albans Grain Co.**Utility Dairy Ration**

Old process linseed meal, soybean oil meal, corn gluten feed, cottonseed meal, corn meal, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, pure cane molasses and dairy salt.

Wirthmore 25 Balanced Ration

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, pure ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore Breeder Mash

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, corn germ meal, alfalfa leaf meal, linseed oil meal, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, pulverized oats and barley, calcium carbonate and salt.

Wirthmore Complete Chick and Broiler Ration

Fortified cod liver oil, yellow corn meal, wheat bran, wheat middlings, ground oat groats, meat scraps, fish meal, alfalfa leaf meal, old process linseed oil meal, soybean oil meal, dried skim milk, dried whey (milk sugar feed), calcium carbonate, salt and cod liver meal.

Wirthmore Complete Laying Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, whole oat groats, ground yellow corn, ground oats, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore 20 Dairy Feed

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, pure ground oats, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore Growing Mash

Dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, soybean oil meal, ground wheat, oats, barley, wheat bran, wheat middlings, wheat red dog, calcium carbonate and salt.

Wirthmore Laying Mash

Dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, linseed meal, soybean oil meal, corn gluten feed, wheat bran, wheat middlings, ground oats, barley, buckwheat, calcium carbonate and salt.

Wirthmore Turkey Fattening Ration

Dried skim milk, dried whey (milk sugar feed), meat scraps, alfalfa meal, yellow corn meal, fine ground oats, wheat bran, wheat middlings, wheat flour middlings, salt, ground barley.

Squier & Co.**Squier's Buttermilk Egg Mash**

Dried buttermilk, meat scrap, fish meal, bone meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground oats, soybean oil meal, calcium phosphate and salt.

D. A. Stickell & Sons, Inc.**Dairy Queen Sweet 20% Milk Maker**

Linseed meal, cottonseed meal, corn gluten feed, soybean oil meal, coconut oil meal, wheat bran, wheat middlings, beet pulp, molasses, corn meal, bone meal, 1% calcium carbonate, 1% salt.

G. H. Symmes**The Ideal Dairy Ration**

Wheat middlings, wheat bran, brewers grains, cottonseed meal, linseed meal, gluten meal, gluten feed, corn meal or hominy, salt, molasses, bone meal, calcium carbonate, ground barley.

Syracuse Milling Co.**Syracuse Dairy Feed**

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, brewers' dried grains, calcium carbonate and salt.

Tioga-Empire Feed Mills, Inc.**E-Gee Dairy Feed**

Wheat bran, cottonseed meal, corn gluten feed, hominy feed, wheat middlings, cane molasses, salt, phosphate of lime, charcoal, iodine, brewers dried grains, corn distillers grains, coconut oil meal. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Or-Co Feed

Cottonseed meal, ground grain screenings, salvaged mixed feeds, corn gluten feed, cane molasses, salt, malt sprouts.

Red Brand Tioga Dairy Feed

Coconut oil meal, wheat bran, cottonseed meal, corn gluten feed, wheat middlings, peanut oil meal, cane molasses, iodine, salt, phosphate of lime, charcoal, soybean oil meal, brewers dried grains, corn distillers grains. (Wheat bran and wheat midds may contain ground screenings not exceeding mill run.)

Special Open Formula Dairy Ration 24%

Wheat bran (may contain mill run screenings), yellow hominy, pure ground oats, old process linseed oil meal, corn gluten feed, corn distillers dried grains, cottonseed meal, molasses, soybean oil meal, dicalcium phosphate, salt.

Special Open Formula Dairy Ration 20%

Wheat bran (may contain mill run screenings), yellow hominy, pure ground oats, corn gluten feed, cottonseed meal, soy bean oil meal, old process linseed oil meal, corn distillers dried grains, molasses, dicalcium phosphate, salt.

United Cooperative Farmers, Inc.

United Farmers Milk Egg Mash

No. 2 yellow corn meal — attrition, standard wheat bran, wheat flour middlings, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, pure dried buttermilk, steamed bone meal, salt.

United Farmers Milkmaker

Choice yellow hominy, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), standard wheat bran, choice cottonseed meal, old pro. linseed oil meal, corn gluten feed, soy bean oil meal, molasses, corn dist. dried grains, steamed bone meal, calcium carbonate, salt.

United Farmers Milk Pep

Choice cottonseed meal, old pro. linseed meal, choice yellow hominy, corn gluten feed, pure gr. oats (No. 2 — 38 lb. clpd-unsul.), soy bean oil meal, standard wheat bran, corn dist. dried grains, molasses, steamed bone meal, calcium carbonate, salt.

C. P. Washburn Co.

"Made Right" Balanced Ration

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewers grains.

"Made Right" Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, gr. oatmeal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dried skim milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

"Made Right" Starting and Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, gr. wheat, soya bean meal, fish meal, dried skim milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

"Made Right" Sweet Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, linseed oil meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grain.

H. K. Webster Co.

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, cod liver oil.

Blue Seal Chick Starter

No. 2 yellow corn meal, ground fancy wheat, fine ground heavy oats, ground barley, corn gluten meal, pure wheat bran, wheat flour middlings, high grade meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, calcium carbonate, salt, cod liver oil.

Blue Seal "20" Dairy Ration

Choice cottonseed meal, hominy feed, malt sprouts, gluten feed, wheat bran, ground oats, P. R. cane molasses, peanut skins, germs and meal, o. p. oil meal, white fish meal, salt.

Blue Seal Growing Mash Fortified with Cod Liver Oil

Dried skim milk, dried buttermilk, h. g. meat scraps, 55% fish meal, alfalfa leaf meal, gluten meal, No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground oats, ground barley, calcium carbonate, salt, cod liver oil, P. R. cane molasses.

Blue Seal Hom-Mix 24% Dairy Ration

Choice cottonseed meal, gluten meal, malt sprouts, wheat bran, P. R. cane molasses, oat feed, o. p. oil meal, peanut skins, germs and meal, hominy feed, calcium carbonate, salt.

Blue Seal Improved All-Mash Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, pure wheat bran, wheat flour middlings, h. g. meat scraps, dried skim milk, dried buttermilk, alfalfa leaf meal, P. R. cane molasses, calcium carbonate, salt, cod liver oil, codfish meal 55%.

Blue Seal Improved Balanced Ration

Choice cottonseed meal, hominy feed, malt sprouts, wheat bran, gluten meal, ground oats, P. R. cane molasses, peanut skins, germs and meal, o. p. oil meal, corn distillers grains, white fish meal, salt.

Blue Seal Laying Mash Fortified with Cod Liver Oil

No. 2 yellow corn meal, pure wheat bran, fine ground heavy oats, h. g. meat scraps, corn gluten meal, wheat flour middlings, ground barley, ground fancy wheat, P. R. cane molasses, alfalfa leaf meal, dried skim milk, dried buttermilk, 55% codfish meal, salt, calcium carbonate, cod liver oil.

Blue Seal Milk Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, dried skim milk, 55% fish meal, alfalfa leaf meal, salt, cod liver oil, cod liver meal blend.

Blue Seal Special 20% Dairy Ration

Choice cottonseed meal, gluten feed, malt sprouts, wheat bran, P. R. cane molasses, oat feed, o. p. oil meal, peanut skins, germs and meal, hominy feed, calcium carbonate, salt.

Blue Seal Turkey Growing

Dried skim milk, dried buttermilk, alfalfa leaf meal, h. g. meat scraps, 55% fish meal, pure wheat bran, pure wheat middlings, No. 2 yellow corn meal, fine ground heavy oats, salt, dicalcium phosphate, calcium carbonate, cod liver oil.

West-Nesbitt, Inc.

All Pure 20% Milk Ration

Choice cottonseed meal, corn distillers' dried grains, corn gluten meal, old process linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Pure Feed Dairy Ration

Corn gluten feed, corn distillers' dried grains, wheat middlings, wheat bran, beet pulp, hominy, or corn meal, choice cottonseed meal, old process linseed oil meal, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Pure Feed Egg Maker

Dried skim milk, bone and meat meal, old process linseed oil meal, corn gluten feed, wheat middlings, wheat flour middlings, hominy or corn meal, steamed bone meal, 1% calcium carbonate, 1% salt.

Pure Feed Egg Mash

Corn meal, oat flour, wheat bran, wheat flour middlings, leaf alfalfa meal, dried skim milk, meat scraps, fish meal, steamed bone meal, 1 per cent calcium carbonate, $\frac{3}{4}$ per cent salt, cod liver oil.

Pure Feed Growing Mash

Oat flour, corn meal, wheat red dog flour, standard wheat middlings, wheat bran, 50% meat scraps, leaf alfalfa meal, dried skim milk, cod liver oil, steamed bone meal 1% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Special 24 Per Cent Dairy Ration

Choice 41% cottonseed meal, corn gluten feed, corn gluten meal, corn meal, wheat bran dried brewers' grains, oatmeal mill by-product (oat middlings, oat shorts, oat hulls), pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Special 20 Per Cent Dairy Ration

Choice 41% cottonseed meal, corn gluten feed, corn gluten meal, corn meal, wheat bran, oatmeal mill by-product (oat middlings, oat shorts, oat hulls), pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Super Pure Sweetfeed Dairy Ration

Corn gluten feed, corn distillers' dried grains, choice cottonseed meal, old process linseed oil meal, wheat bran, hominy or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Est. M. G. Williams

Williams' Balanced Ration

Corn meal or hominy, linseed oil meal, cottonseed meal, ground oats, gluten feed, dried brewers grains, wheat feed, calcium carbonate and 1% salt.

Williams' Laying Mash

Corn meal, bran, middlings, ground oats, beef scraps, fish meal, leaf meal, dried skim milk, calcium carbonate, salt and cod liver oil.

Stanley Wood Grain Co.

Bliss Dairy Ration

Corn meal (or hominy), cottonseed meal, wheat bran, linseed meal, wheat middlings, gluten meal, gluten feed, table salt, edible bonemeal, calcium carbonate, (beet pulp).

Preferred Laying Mash

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, yellow corn meal, wheat bran, pulverized oats, wheat middlings, edible bonemeal, table salt, calcium carbonate.

Preferred Starting and Growing Feed

Pure dried skim milk, dried fish meal, yellow corn meal, wheat bran, wheat middlings, fine ground oatmeal, alfalfa leaf meal, beef scraps, edible bonemeal, table salt, calcium carbonate.

Wood's Dairy Ration

Wheat middlings, malt sprouts, linseed meal, corn meal (or hominy), wheat bran, cottonseed meal, gluten feed, ground oats, edible bonemeal, molasses, calcium carbonate, salt.

BULLETIN NO. 76

DECEMBER, 1934

Inspection of Agricultural
Lime Products

By H. D. Haskins

This is the twenty-third report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold in the State during the year. In case of the ground limestone products the mechanical analysis is also given.

Massachusetts State College
Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1934

By H. D. Haskins, Official Chemist.¹

Manufacturers and Brands.

During 1934, twenty-three firms registered for sale in Massachusetts forty-five brands of lime products suitable for neutralizing acid soils and one brand of gypsum or land plaster. The products are grouped as follows:

Hydrated or slaked lime	23
Ground limestone	20
Oyster shell lime	1
Lime kiln ashes	1
	<hr/>
	45
Gypsum	1

With the exception of two brands of hydrated lime, all of the lime products registered have been analyzed and the results appear in this bulletin.

Most of the samples were drawn between the dates of April 1 and June 15, although several were secured during the early fall at seeding time and later when land was being plowed for the 1935 onion crop at which time much land is limed in the Connecticut Valley. The spring samples were taken by the same inspectors who drew the fertilizer samples and were taken from all over the state. We therefore believe that they are a fair representation of the lime products used as soil amendments for 1934. Ninety-eight samples, representing 44 brands, were drawn from stock in the possession of 85 agents or owners.

Variations and Deficiencies in the Composition of Lime Products.

In limestone products calcium is usually associated with more or less magnesium; when the latter element is present in only small amounts the product is known as high calcium limestone; when the magnesium oxide runs to 20 per cent or over it is usually designated as dolomite. Both of these elements when in the form of either caustic or burned lime, hydrated or slaked lime, or carbonate (ground limestone) have the property of neutralizing or reducing soil acidity, the main purpose for which they are used as soil amendments. With this in mind a study of Table I shows no serious deficiencies among the hydrated lime products. It is true that several deficiencies are noted, yet they are of little significance when viewed from the standpoint of the compensating neutralizing value of the overrun of the companion element (magnesium oxide in case of calcium oxide shortage and calcium oxide in case of magnesium oxide deficiency).

The Snow Fluff Agricultural Hydrated Lime, manufactured by Brewer & Co., Inc., showed a deficiency of 3.93 per cent of magnesium oxide as compared with the guarantee. This was in part made up by an overrun of 2 per cent of calcium oxide, leaving a magnesium oxide deficiency which in terms of calcium oxide equivalent would amount to 3.46 per cent calcium oxide ($3.93 \times 1.39 = 5.46 - 2 = 3.46$). This was the largest deficiency noted in this class of liming products.

No serious deficiencies occurred in the ground limestone products listed in

¹Assisted by H. Robert DeRose, First Assistant Chemist; James T. Howard, C. L. Whiting, A. G. Brigham, and G. E. Taylor, Sampling Agents.

Table II. Some criticism, however, seems called for in connection with the degree of fineness to which at least four of the products were ground: these were manufactured by the Hoosac Valley Lime Co., Inc., D. U. Smith & Bro., Hazen Brothers, and Eastern States Farmers' Exchange. We should not lose sight of the fact that the fineness of any ground limestone or ground shell lime determines in no small measure its effectiveness in neutralizing soil acidity during a one- or two-year period. This is of particular significance when, as is sometimes the case, the handling and transportation charges equal or exceed the original cost of the product at the plant.

The inspection of ground limestone products shows that in some instances refuse burned lime known as "core" has been added. This in no way lessens the value of the product, but on the contrary increases the neutralizing value and should not add seriously to the discomfort of handling.

Explanation of Tables of Analyses.

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO_2). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked), burned lime (caustic or unslaked), or as basic silicate. It should be understood that all of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

"Neutralizing value expressed in terms of calcium oxide" represents the acid neutralizing value of both the magnesium and calcium. The figures in the "per cent" column are obtained by a direct titration with standard acid. The "pounds in one ton" are secured by multiplying the figures in the "per cent" column by 20.

Table II, in the column headed "Carbonates of calcium and magnesium" the calculation allows for the small amounts of calcium and magnesium combined as basic silicates; these are readily soluble in mineral acid solutions but obviously should not be classed as carbonates.

"Neutralizing value: per cent and pounds in one ton." In securing these data the degree of fineness to which the limestone has been ground is taken into consideration. When the products are so finely ground that all of the material will pass through a 20-mesh sieve, it is assumed that all of the calcium and magnesium oxides will become available in the soil within a five-year period. In the less finely ground products it is assumed that the oxides in that portion which is coarser than 20-mesh will be only 50 per cent effective during the same period.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

In both tables the figures in parentheses following the brand name show the number of samples collected and analyzed.

Table III. Gypsum or Land Plaster.

Name of Manufacturer and Brand.	Calcium Oxide (CaO).		Calcium Sulfate (CaSO ₄).		Calcium and Magnesium Carbonates Found.
	Found.	Guar- anteed.	Found.	Guar- anteed.	
United States Gypsum Co., 300 West Adams St., Chicago, Ill. U. S. G. Ben Franklin Agricultural Gypsum (2)	32.75	30.00	75.57	64.50	4.35

NOTE: The product carried 18.67% of water. The small amount of calcium and magnesium carbonates present would to a slight extent neutralize sour soils; the calcium sulfate would not be effective for this purpose.

Deciding the Lime Requirements of the Soil and the Purchase of Lime Products.

In securing information as to the amount of lime needed on any particular soil for a given crop, the common practice is to call in the County Agent or the Extension Agronomist, who draws the sample, preferably by means of a soil auger, and makes the test. Oftentimes, however, inquiry is made by the farmer as to how he shall proceed in securing a representative sample of his soil for testing. Assuming that a five-acre tract is to be sampled; have at least ten different samples drawn from the area, each sample to be about uniform in weight. Select the places to be sampled so that two of them will be located on each acre and so that the ten places will, so far as possible, be a fair representation of the whole area. Remove all vegetable matter from the surface to be sampled. It is immaterial what tools are employed in taking the sample: it may be a soil auger, trowel or shovel. Each sample should represent a thin section from the top down as deep as one would naturally plow. When a sufficient number of samples have been drawn and placed in a pail or other container, thoroughly mix the whole lot, breaking up the large lumps and continuing the mixing until a thoroughly uniform mass is secured. Fill a clean quart jar with the mixture, taking small portions from the whole area of the mixed mass. Take the sample to the County Agent, Extension Agronomist, or anyone who has the proper equipment and experience to make the test and who can advise as to the lime application necessary for the crop to be grown.

In purchasing lime in large quantities it is good practice to ask for quotations from several firms, basis f.o.b. at the farm in case truck delivery is most economical, if not, then f.o.b. at railroad station nearest to the farm. In cases where indications of magnesium deficiencies in the soil have been noted through a lack of green coloring matter in the leaves, or a whitening of the leafy structure of plants, a lime product high in magnesium oxide should be selected. As previous lime bulletins have furnished examples for calculating the most economical lime product to buy, further information along this line seems unnecessary at this time.

Final Report

MASSACHUSETTS AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN No. 77

FEBRUARY, 1935

Seed Inspection

By F. A. McLaughlin

This Report, the seventh in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1934 by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274.)

Massachusetts State College
Amherst, Mass.

ANNOUNCEMENT

The Seed Testing Laboratory will allow ten units of work free of charge, during any calendar year, to any resident firm or citizen of Massachusetts.

Units are rated as follows:

	Units
Purity analysis (red clover, timothy, etc.).....	1
Purity analysis (bluegrass, orchard grass, etc.).....	2
Purity analysis of a mixture of seeds (depending upon the number of kinds in the mixture).....	4-10
Examination for noxious weeds (4 oz. or fraction thereof) of samples not mixtures.....	1
Examination for noxious weeds (4 oz. or fraction thereof) of mixtures.....	4-10
Identification of seed or plant.....	1
Cleaning tobacco seed (4 oz. or fraction thereof).....	2
Germination tests (4 x 100 seeds, of any seed not chaffy or requiring a purity test).....	1
Germination tests (soil, 2 x 100 seeds).....	1
Germination tests (chaffy grasses or seeds requiring purity analysis).....	2-4

Fees for work in excess of the ten free units allowed are as follows:

- Germination test except for grasses other than timothy, but including clovers and alfalfa, thirty cents each.
- Germination tests of grasses except timothy, fifty cents each.
- Purity analyses of cereals, fifty cents each.
- Purity analyses of timothy, and all other kinds of crop seeds, except grasses, seventy-five cents each.
- Purity analyses of grasses and of all mixtures of not more than two kinds of agricultural seeds, one dollar each.
- Purity analyses of special mixtures, including lawn grasses and pasture mixtures, a charge sufficient to cover the actual cost of working the sample, the amount of such fee depending entirely upon the character of the sample submitted for test, minimum charge one dollar and twenty-five cents.

In no case will final report be rendered until all fees are paid.

SEED INSPECTION

By F. A. McLaughlin¹

This bulletin gives the results of analysis of official seed samples, collected by the State Department of Agriculture during the year 1934 from the open markets in 112 towns and cities of Massachusetts, and analyzed at the Seed Testing Laboratory of the Massachusetts Agricultural Experiment Station at Amherst. Between October 1, 1933, and October 1, 1934, the Seed Laboratory analyzed 1,402 samples, of which 732 were collected by the State Department of Agriculture, 289 submitted by dealers and farmers, and 185 by the Rhode Island Department of Agriculture; 196 were purchased from wholesalers for special tests.

This bulletin also contains results of field tests for trueness to types of 300 samples of sweet corn, and 139 lots of the following vegetables: beans, beets, carrots, cucumbers, lettuce, onions, parsnips, radish, spinach, squash and turnips, conducted by the Department of Vegetable Gardening; also notes on the relation of seed-borne diseases observed in laboratory germination of sweet corn to emergence in the field.

SUMMARY OF RESULTS

Alfalfa to Timothy

The following table of analysis covering the 165 samples of seed in this group shows that again, as in former years, the most common violation of the seed law is the lack of certain required information on the label. This information was lacking, wholly or in part, for 61 samples (36.97%). Other deficiencies shown are 27, or 16.36%, below in germination; 5, or 3.03%, with excessive weed seed; and 19, or 11.51%, below in purity. In all, 95 samples (57.57%) of this group either did not comply with the label requirements or were not up to guarantee, even when proper tolerance allowances were made.

Mixtures of Not More Than Two Lots of Seeds

No samples declared as such were taken by inspectors. Five samples, however, sold for pure seed of a single kind, were found to be mixtures of two sorts of seed. The table shows them otherwise deficient.

Special Mixtures

Forty-one samples were analyzed in this group. Fifteen (36.58%) complied with requirements of the law in every respect. The remaining twenty-six were only partially labeled or were found not to comply with statements as labeled.

Vegetable Seed

A larger number of samples of vegetable seed was taken than formerly. Each of the 521 samples tested met the label requirements of the law. On the whole the quality of seed as shown by germination is equal to that of any previous collection of official samples tested in this laboratory; yet 199, or 38.20% of the samples, show germination below the standards required by law in

¹Miss Jessie L. Anderson served as seed analyst for a period of three months; Miss Margaret E. Nagle resigned September 1, 1934.

many states (Seed Control Bulletin 56, 1930, page 4). This record shows much to be desired in quality of many vegetable seeds sold in Massachusetts. One cause of the poor showing is the practice among retailers of offering for sale seed which has been in their possession for one or more years. Seeds of certain varieties may retain satisfactory viability for several years if properly stored, but other kinds lose a large part of their viability in one year. Where old seed is noted in the tables, we believe the wholesaler should be for the most part absolved from blame.

Explanation of Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Timothy, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F", what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, or excessive inert material, depending upon the column in which it is found.

Other deficiencies are enumerated as follows:

- (1) Noxious weeds found.
- (2) Old seed.
- (3) Ingredient found, but not declared.
- (4) Ingredient declared, but not found.
- (5) Ingredient declared, but percentage found after adding proper tolerance is less than 5%.
- (6) Term not specific.

The letter "R" after the germination percentage in the table of vegetable seeds indicates that the sample has received one or more retests.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance", the sample is considered as made up of two component parts: (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus twenty per cent (20%) of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination</i>	<i>Allowable Variation (%)</i>
90 or over.....	6
80 or over, but less than 90.....	7
70 or over, but less than 80.....	8
60 or over, but less than 70.....	9
Less than 60.....	10

Laboratory and Field Germination Tests of Sweet Corn

Seed Laboratory, Departments of Botany and Vegetable Gardening Cooperating

The following summary marks the end of three successive years' work, during which comparative laboratory and field tests of sweet corn have been conducted in an endeavor to find the effect of various seed-borne organisms on germination.

The purpose of the germination tests and the methods followed throughout were essentially the same as those described for 1933. This year, however, in addition to the laboratory and field germination work, a seed treatment test was conducted. Several lots of seed that showed pronounced contamination or infection by common seed-borne fungi in the laboratory germinator, as well as a few comparatively disease-free lots, were included in order to determine the effect of two common seed disinfectants upon normal germination in the field. The Seed Laboratory had direct charge of the germination work in the laboratory; the Vegetable Gardening Department supervised planting of the field tests; and O. C. Boyd, Extension Plant Pathologist, made disease readings with interpretations in all three tests.

The laboratory germinations were run during April and May, and the field plantings were made in June. The field tests were located on moderately heavy, well-drained soil, and weather and soil conditions were considered very favorable for germination and subsequent growth of plants.

This year 196 lots or sources of seed, representing 83 varieties, were germinated in the laboratory; and 175 of the corresponding lots in the field. A summary of the results, together with interpretations is given below. A more detailed discussion of the results for the three year's project will appear at a later date in another publication.

1. Germination in the laboratory (average of all lots):	<i>Per Cent</i>
a. Total germination (range of 66.5-100).....	92.6
b. Abnormal due to seedling infection (0-56).....	17.5
c. Abnormal due to other causes (0-8).....	0.9
d. Normal germination (33-99).....	74.2
2. Germination in the field (average of all lots):	
a. Total emergence (range of 23.5-99.5).....	79.4
b. Abnormal plants (only stunted plants were pulled and examined):	
(1) With infected mesocotyl or root (0-27).....	10.9
(2) Not diseased; undersized only (0-6).....	0.9
c. Normal germination (18.5-97.5).....	67.6

In general the results were similar to those for 1933. Again the average total emergence in the field test fell far below the average total germination in the laboratory, but was only slightly higher (5.2%) than the average *normal* germination in the laboratory series. Perhaps the most outstanding difference between the above summary and the one for 1933 is the higher percentage of abnormal seedlings this year in both the laboratory germinators and the field planting. Seed-lot contamination and seedling infection by *Rhizopus* and *Penicillium* in particular, as well as kernel decay and seedling infection by *Diplodia*, were more noticeable in the laboratory test this year than in 1933. It may be that weather conditions prior to and during harvest of the seed were particularly favorable for contamination and infection by those fungi.

It will be noted that in spite of the fact that every seedling in the germinator that showed a primary disease lesion on root or shoot was pronounced abnormal, the total of which averaged 17.5 per cent, yet the average percentage of normal germination in the laboratory series remained considerably above that for the field germination test; 7.6 per cent higher. This perhaps might be explained in part by the greater depressing effect of both the seed-borne diseases and the otherwise weak seedlings on total emergence and normal germination in the field planting than in the laboratory where conditions for germination are more suitable; and in part by the additional depressing effect on field germination of soil-inhabiting parasites.

Effects of Molds and Other Seed-Borne Fungi on Germination

Some of the more common seed-borne fungi were observed to have a marked effect on germination in both the laboratory and the field. In considering groups of seed-lots that were affected by some one outstanding disease in the germinators, *Diplodia* appeared to cause the greatest reduction in normal germination in the laboratory test, with *Rhizopus*, *Penicillium*, and *Fusarium* (and *Gibberella*) ranking next in order of importance. In the field, however, *Rhizopus* was the most important single factor in reducing both the total emergence and normal germination, with *Penicillium*, *Diplodia*, and *Fusarium* (and *Gibberella*) following in the order indicated. The following table indicates the comparative effect on germination of those seed-borne fungi:

Outstanding Diseases in Laboratory Germinator	Number of Lots	Average germination in Laboratory		Average germination in Field	
		Total	Normal	Total	Normal
		<i>Per Cent</i>	<i>Per Cent</i>	<i>Per Cent</i>	<i>Per Cent</i>
None; all diseases light.....	39	95.3	86.0	88.4	79.1
<i>Diplodia</i>	23	92.2	70.6	81.2	69.8
<i>Rhizopus</i>	34	94.0	73.0	74.2	60.8
<i>Penicillium</i>	11	93.8	75.6	79.2	66.6
<i>Fusarium</i> (and <i>Gibberella</i>).....	24	93.1	77.3	83.1	71.9

Since many more seed-lots were severely affected by the two molds (*Rhizopus* and *Penicillium*) than by *Diplodia* or other seed-borne disease fungi, they constituted in the aggregate by far the greatest depressing factors on germination, especially in the field. Other seed-borne fungi, such as *Alternaria*, *Basidiosporium*, *Hormodendron*, and *Cephalosporium*, were observed commonly in the laboratory germinator, causing dead kernels or weak seedlings, but were less important than the organisms mentioned in the preceding paragraph.

Effect of Seed Treatment on Germination in the Field

Following the laboratory germination test, 35 seed-lots were selected for the presence of particular seed-borne diseases, and 10 for relative freedom from diseases. Each lot was divided into three series, one of which was treated in mercuric chloride for 10 minutes, one dusted with ethyl mercury phosphate (*Semesan Jr.*), and the other left untreated for a check. The seeds were planted in June in rows 36 inches apart, 4 inches apart in the row, and were covered by hand. The three series of a lot were planted side by side in adjacent rows, with the untreated one in the middle. The corresponding series of a second lot followed in the same rows with a short interval between lots; and so on, with 7 lots end to end in each three-row group. The effect of the treatments is summarized as follows:

	<i>Number of Lots</i>
1. Kind of diseases represented:	
a. Free from seed-borne diseases.....	10
b. Heavy Rhizopus contamination.....	6
c. Heavy Penicillium contamination.....	6
d. Both Rhizopus and Penicillium.....	10
e. Pronounced Diplodia infection.....	7
f. Pronounced pink-kernel discolorations by Fusarium and Gibberella.....	6
2. Effect of treatments on normal germination:	
a. Increased germination from both treatments.....	19
b. Benefit from the liquid treatment only.....	4
c. Benefit from the dust treatment only.....	4
d. Reduced germination (injury) from both treatments.....	2
e. Injured by the liquid treatment only.....	2
f. Injured by the dust treatment only.....	1
g. No appreciable benefit or injury from either treatment.....	13
3. Extent of improvement in normal germination due to the treatments:	
Mercuric chloride, 4 to 20%, with an average of 10.5%	
Semesan Jr., 4 to 23%, with an average of 11.1%.	
4. Response of individual diseases to the treatments:	
a. The 22 lots contaminated with Rhizopus and (or) Penicillium:	
Benefited by both treatments.....	15
Benefited by one treatment or the other.....	3
No apparent effect shown.....	4
b. The 10 disease-free lots:	
Benefited by both treatments.....	1
Benefited by the mercuric chloride treatment.....	1
Injured by both treatments.....	1
Showed no benefit or injury.....	7
c. The 6 lots heavily discolored by Fusarium:	
Benefited by the treatments.....	4
Not benefited by the treatments.....	2
d. The 7 lots noticeably infected by Diplodia:	
Increased germination from the treatments.....	4
No apparent effect from the treatments.....	3

It appears that increased germination from both treatments was most consistent among the seed-lots that showed marked contamination or infection by Rhizopus and Penicillium. The mercuric chloride treatment appeared to be slightly more effective against these two molds than the organic mercury dust; the Semesan Jr. dust treatment, more effective against Diplodia and Fusarium; while neither treatment proved beneficial to a majority of the disease-free lots.

It seems evident from the observations made in the 1934 sweet corn germination work that seed-borne diseases may affect appreciably the normal germination in both the laboratory and the field, showing a greater depressing effect in the field; and that seed treatment with mercuric chloride or organic mercury will considerably increase normal germination in the field in a majority of the more heavily diseased lots. Common molds, such as species of Rhizopus and Penicillium, are likely to be greater sources of injury to germination in the field than other kinds of seed-borne disease organisms because of their unquestionable pathogenicity and their usually greater abundance in seed corn. These molds, however, respond very well to seed treatment.

It is believed that if seedlings in the laboratory germinator that show infection by organisms arising from the particular kernels concerned are considered abnormal, then the normal germination readings in the laboratory can be expected to represent a fair index of the germinating ability of the corresponding lots in the field. If the seedling diseases are not taken into account in the laboratory counts, the total emergence and normal germination in the field are likely to be considerably lower than might be expected from the laboratory readings.

Type and Variety Studies of Sweet Corn

Conducted in Conjunction with the Department of Vegetable Gardening
Grant B. Snyder

The field trials of sweet corn for 1934 included 300 lots, consisting of 125 different named sorts from 90 sources. The seed was obtained in all cases from the seed firm or grower. In conducting the trials every effort was made to maintain as uniform conditions as possible and to evaluate the plant and ear characteristics on a fair basis. Detailed records were taken of each lot as to plant, ear, and kernel characters as well as maturity periods. Kernel toughness was also studied for a few of the more important commercial sorts.

In general the sorts included were true in type for the variety designated by the seedsman.

Golden Gem by S. D. Woodruff resembled Spanish Golden as in the trials of 1933.

Golden Sunshine was divided into two rather definite groups. The strains from Alex. Forbes Seed Co., Joseph Breck & Sons Corp., Hart Seed Co., S. D. Woodruff & Sons, and F. H. Woodruff & Sons bore ears resembling Golden Early Market somewhat more than original Sunshine. The variation, however, was not sufficient to prevent their inclusion within the variety range for Golden Sunshine.

Golden Bantam strains were uniformly eight-rowed, and any lots of Golden Bantam type having more than eight rows were generally designated as different from true Golden Bantam by the seedsman.

Hybrid Sweet Corns, which were first produced for their resistance to Stewart's disease, performed well, all of the named sorts being high yielding and very uniform, with Top Cross Bantam, Golden Cross Bantam, and Red Green of excellent eating quality. Some of the unnamed sorts in the trials have since been named, and it would appear that even in years when Stewart's disease is not serious, hybrid sweet corns will be of considerable importance due to their uniformity of ear characters and high yielding ability.

Type and Variety Studies of Vegetables

Conducted in Conjunction with the Department of Vegetable Gardening
Grant B. Snyder

Most small home gardeners buy their vegetable seeds from the neighborhood store in packet or bulk lots. They find that in a fair percentage of cases seed purchased from such sources are quite variable in germination and the resulting plants are variable in type and performance. With this in mind the Department of Vegetable Gardening cooperated with the Seed Laboratory in checking packet and bulk seed stock which was purchased on the open market from various sources by state inspectors.

Specifically, the project was undertaken to check the various lots on trueness to name and actual performance in the field. The sorts planted in the field trials included 139 lots of the following vegetables: beans, beets, carrots, cucumbers, lettuce, onions, parsnips, radish, spinach, squash, and turnips.

In general, the various sorts ran fairly true to the name printed on the seed packet. The carrots were very much off type, and there were some misnamed in the lettuce and spinach lots.

PUBLICATION OF THIS DOCUMENT APPROVED BY THE COMMISSION ON ADMINISTRATION AND FINANCE

2000-3-'35. No. 3873

MASSACHUSETTS
AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN NO. 78

JULY, 1935

**Fifteenth Annual Report on
Eradication of Pullorum Disease
in Massachusetts**

By the Poultry Disease Control Laboratory

The purpose of this bulletin is to report the results of pullorum-disease testing for the 1934-35 season. In the discussion of the results it is pointed out that progress is being made in the eradication of the disease as revealed by increases in the number of tested birds and tested samples of which only 0.39 percent were positive. The average percentage of positive tests is the lowest attained during the fifteen-year testing period. Salient factors which play a part in successful eradication are emphasized.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

FIFTEENTH ANNUAL REPORT ON PULLORUM DISEASE ERADICATION IN MASSACHUSETTS 1934-1935

By the Poultry Disease Control Laboratory¹

INTRODUCTION

Pullorum-disease testing has been carried on for Massachusetts poultrymen for the past fifteen years. During this period marked progress has been made in eradicating the disease from flocks. This outstanding accomplishment has greatly benefited the poultry industry, and it is the result of employing a reliable and efficient testing method together with sound and effective eradication and preventive measures, through the splendid cooperation of flock owners. As the pullorum-disease testing is continued, the benefit to the Massachusetts poultry industry will become progressively greater. It is seemingly evident that with an expansion in testing and an increase in the number of pullorum-disease-free breeding flocks, the losses from pullorum disease will be reduced to a minimum.

Summary of Service Rendered

Applications received	252
Applications cancelled	5
Flocks tested	247*
Number of tests	302,237
Chickens:	
Routine	289,464
Experimental	12,423
Fowl other than chickens:	
Routine	137
Experimental	213
Owners receiving necropsy service	29
Necropsies of reacting birds	74

*Includes three flocks of poultry other than chickens.

Distribution of Tests and Reactors

Table 1 shows the distribution of tests and reactors by counties and breeds. A total of 301,887 samples received from 12 counties was tested. The percentage of positive samples was 0.39, the lowest ever attained during the 15-year testing period. No reactors were detected among birds tested in Barnstable, Plymouth and Suffolk Counties. Only three reactors were detected among 57,622 samples tested for Norfolk County, revealing a percentage of positive tests of 0.005. In every county the percentage of positive tests was less than one. Norfolk, Middlesex and Bristol lead in the number of tested samples. No reactors were detected among the 10,610 samples collected from White Plymouth Rocks and the 2,042 samples collected from White Wyandottes.

¹Poultry Disease Control Laboratory Staff:—H. Van Roekel, Chief of Laboratory; K. L. Bullis, Assistant Veterinary Pathologist; O. S. Flint, Assistant Research Professor; Miriam K. Clarke and Felicia Zimnoski, Laboratory Assistants. Appreciation is extended to Dr. J. B. Lentz for assistance given to the testing work.

ANNUAL TESTING EFFECTIVE IN ERADICATION

Table 2 shows that 244 flocks were tested, representing 281,124 tested birds. Of this total, 37 flocks were tested for the first time, representing 19,474 birds and 22,790 tests, of which 2.17 percent were positive. The percentage of positive tests in this group was the highest among the four groups of tested flocks. However, it is encouraging that 27 of the flocks were non-reacting, which shows that among flocks tested for the first time, the incidence of pullorum disease is becoming less as the result of dissemination of pullorum-disease-clean stock.

In the intermittent-testing group, 18 flocks were tested, representing 11,315 birds, which revealed 0.41 percent reactors. In this group 14 non-reacting flocks were detected. Some of these flocks were established through the purchase of stock from pullorum-disease-clean sources, while in others their owners were successful in preventing the introduction of infection. The infection in the four positive flocks is attributed to faulty practices in disease eradication and prevention.

In the group tested for three or more consecutive years, 247,087 samples were tested, representing 161 flocks of which 149 were non-reacting and 12 were infected. The percentage of positive tests was 0.18, the lowest ever attained for this group during the testing history. It is clearly evident that continuous testing is successful in establishing and maintaining flocks free from the disease. It is reasonable to assume that all flocks which have been tested for three or more consecutive years will in the near future qualify for the negative group at the end of each testing season.

The average percentage of infection among the 244 tested flocks was 0.39. The total number of positive tests was 1,182, as compared with 1,512 in the 1933-34 season. This is a substantial decrease in the number of positive tests which is further evidence that progress is being made on eradication. The total number of non-reacting flocks was 213, of which 163 were 100 percent tested.

The percentage of flock owners who tested all the birds on the premises has increased from 66.8 in 1933-34 to 74.5 in 1934-35. The soundness of testing all birds on the premises cannot be ignored because the exact status of a flock cannot be determined with any degree of certainty by testing only part of the birds.

TABLE 2.--ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Per Cent	100% Tested	Partially Tested	100% Tested	Partially Tested

Two consecutive years.....	28	20,400	20,695	205	0.99	18	5	2	3
Three or more consecutive years..	161	229,935	247,087	437	0.18	118	31	9	3
Totals.....	244	281,124	301,887	1,182	0.39	163	50	19	21

APPEARANCE OF INFECTION IN FLOCKS PREVIOUSLY NEGATIVE

In Table 3 are listed nine flocks which were negative in 1933-34, and revealed infection in 1934-35. The source of the infection was accounted for in four flocks as originating from custom-hatching or purchase of questionable stock. In five flocks the origin of infection remained obscure. In the majority of "breaks" the flocks possessed only a short non-reacting testing history (one or two years). In three flocks the infection was completely eliminated through intensive re-testing. While the number of "breaks" is small, it reveals that non-reacting flocks can become re-infected; hence the need for annual testing becomes apparent. Also the importance of effective preventive measures should not be ignored by the flock owner. The re-introduction of infection has involved additional expense through retesting, as well as from other points of view. The flock owner should be continually on his guard against infection which may enter through various channels. In this manner it will be possible to reduce the number of "breaks" to a minimum.

TABLE 3.--APPEARANCE OF INFECTION IN FLOCKS PREVIOUSLY NEGATIVE

Flock	Number of Years Negative	1934-35 Season			Explanation for Infection	
		Flock Total	Number Tested	Positive Tests Percent		
1	4	2,312	2,311	0.61	No information

		611		*45		0.00

*Represents retests.

NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

Table 4 shows that in 12 counties a total of 213 non-reacting flocks, representing 251,778 birds, were established at the close of the testing season. At the end of the season 31 infected flocks, representing 29,346 birds, were credited to 8 counties. No reactors were detected among tested flocks in Barnstable, Plymouth and Suffolk Counties. Middlesex, Bristol and Worcester Counties led in the number of non-reacting flocks, while Norfolk, Middlesex and Worcester Counties had the largest number of birds in non-reacting flocks. Of the total birds tested 89.5 percent were in the non-reacting flocks. Of the 251,778 birds in the negative flocks 86.5 percent were in the 100 percent tested flocks.

TABLE 4.--NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

County	100% Tested		Partially Tested		Total	
	Flocks	Birds	Flocks	Birds	Flocks	Birds
Non-Reacting Flocks						
Barnstable.....	3	2,442	—	—	3	2,442

Suffolk.....	1	597	—	—	1	597
Worcester.....	23	31,670	3	1,496	26	33,166
Totals.....	163	221,646	50	30,132	213	251,778
Positive Flocks						
Berkshire.....	3	4,720	1	437	4	5,157
Bristol.....	2	4,505	4	2,217	6	6,722
Essex.....	1	605	—	—	1	605
Franklin.....	2	1,123	1	1,343	3	2,466
Hampden.....	4	2,356	—	—	4	2,356
Hampshire.....	—	—	2	1,874	2	1,874
Middlesex.....	2	3,068	2	2,534	4	5,602
Worcester.....	5	4,323	2	241	7	4,564
Totals.....	19	20,700	12	8,646	31	29,346

These data show progress in eradication as compared with the results of 1933-34, when four-fifths of the total tested birds were found in non-reacting flocks. It is encouraging that the amount of infection is gradually being reduced and that the poultrymen are demonstrating that it is possible not only to eradicate infection but also to maintain flocks free from the infection. This task will become less difficult as the bulk of infection decreases and poultrymen become better fortified to guard against the introduction of infection through different channels.

COMPARISON OF 1933-34 AND 1934-35 SEASONS

The results of the 1933-34 and 1934-35 testing seasons are given in Table 5. The number of tested flocks was slightly less in 1934-35 than in 1933-34, but increases were observed in the number of tested birds and tests. The average percentage of positive tests was less for the 1934-35 season. In 1933-34, two counties were without reactors and in 1934-35 three counties revealed no infection. All counties had less than 1 percent positive tests, even though four counties had a slight increase in the percentage of infection. Nine counties had an increase in the number of tested birds.

While the number of tested flocks during the past season was slightly less than during the 1933-34 season, yet 73 flocks were tested the previous season and not in 1934-35. Forty-three flock owners, who had tested for two or more consecutive years, discontinued testing in 1934-35.

TABLE 5.--COMPARISON OF 1933-34 AND 1934-35 TESTING

County	Flocks	Birds	Tests	Positive Tests Per Cent	Non-Reacting Flocks

Totals.....	244	281,124	301,887	0.39	213

Discontinued and intermittent testing lead to retardation in the progress of pullorum-disease eradication. The fact that pullorum infection is still widespread necessitates the cooperation of every poultryman in having his flock tested annually to reduce the infection and maintain known pullorum-clean flocks.

Some poultrymen have been led to believe that the whole-blood test will suffice for the same purpose as the standard tube test, which is used in the laboratory. Recent observations have substantiated that the whole-blood test is not as efficient and sensitive as the standard tube test for complete eradication of the disease and in determining the true status of a flock.

The primary object of pullorum-disease testing in Massachusetts is to maintain the flock free from the disease and to establish additional clean flocks through closely supervised testing and supervised replacements from known free flocks. The progress and success of such a testing program depend largely upon the cooperation received from the poultrymen and other poultry agencies. A disease control and eradication program can accomplish little when it is not properly organized, supervised and carried out. Every poultryman should feel his responsibility in supporting a program that has the definite objective of benefiting the entire poultry industry.

FECES FROM REACTING BIRDS MAY TRANSMIT PULLORUM DISEASE

In the eradication of pullorum disease the question is frequently presented concerning the possibility of spreading the infection by means of the droppings. While it has been clearly demonstrated that transmission takes place among birds in a laying flock, yet the role that droppings may play in the spread of the disease is quite vague. As will be pointed out in the following experiments, it seems that comparatively fresh droppings which might contain the organism did not act as a potent source for infecting susceptible birds, when the feces were added to the litter. Since it is recognized that infected birds may eliminate the organism through the droppings, an experiment was conducted to determine with what success and ease susceptible birds could be infected by force-feeding fresh droppings from reacting birds. The object was not to duplicate natural conditions but to set up conditions which were most apt to produce positive results.

Experiment I. Exposure of Pullorum-Disease-Free Birds to Litter Contaminated with Feces from Positive-Reacting Birds.

In a previous report by this station¹ negative results were obtained when pullorum-disease-free birds were exposed to litter contaminated with feces from positive-reacting birds. Continuing the study, the following report gives the results of exposure of a second group of pullorum-free birds to litter contaminated with feces from positive-reacting birds.

¹Van Roekel, H., Bullis, K. L., Flint, O. S., and Clarke, M. K. 1932. Twelfth Annual Report on Eradication of Pullorum Disease in Massachusetts. Mass. Agric. Exp. Sta. Bulletin 63: 19-22.

Procedure

Twenty-five pullorum-disease-free pullets, 17 weeks old, were put into an 8 x 12 house with a screened sun porch of the same dimensions. These pullets were purchased as day-old chicks from a flock which has been negative to the tube agglutination test for two years. They were maintained on experiment for a period of eighty-five weeks.

The feces were obtained from two groups of positive-reacting birds isolated in a 8 x 12 house and were collected from the dropping boards daily. Roosts and dropping boards were screened with wire poultry netting. Feces from Group I of the positive-reacting birds were added to the litter (shavings) daily for 21 weeks when a new group of positive-reacting birds was obtained. The addition of feces from Group II was withheld for eight weeks, when daily additions of feces were resumed and continued for 23 weeks. The pullorum-disease-free birds were held for 33 weeks following the termination of the addition of feces to the litter when they were killed and necropsied.

Approximately one-half to one quart of feces was added to the litter daily. The soiled litter was replaced completely with clean litter four times during the experiment.

Scratch grain was fed in the litter morning and afternoon.

The pullorum-disease-free birds were tested by the tube agglutination test (in dilutions of 1:10 and higher) at bi-weekly intervals. The antigen used was a composite of three known agglutinable strains of *S. pullorum* selected by the Northeastern Laboratory Workers' Conference and was prepared according to the standard methods recommended by this conference.

Results

All birds remained negative to the tube agglutination test throughout the experiment.

The 25 birds (17 birds died during the course of the experiment) were necropsied and *S. pullorum* was not isolated.

The following table gives the data showing the length of time individual birds were maintained on experiment.

Bird No.	Number of Weeks on Experiment	Bird No.	Number of Weeks on Experiment	Bird No.	Number of Weeks on Experiment
53944	23	53953	85	53961	31
53945	85	53954	58	53962	85
53946	76	53955	85	53963	84
53947	32	53956	85	53964	43
53948	72	53957	52	53965	85
53949	51	53958	40	53966	83
53950	85	53959	73	53967	73
53951	18	53960	38	53968	33
53952	33				

The results obtained in this experiment suggest that feces from infected hens are not an important vehicle in the transmission of pullorum disease to older birds kept under an environment approaching natural conditions.

Experiment II. Feeding Feces from Positive-Reacting Birds to Pullorum-Disease-Free Birds.

Five groups of birds were used in this experiment. Group I consisted of eight positive- and eight negative-reacting birds; Groups II and III each of 10 positive- and 10 negative-reacting birds; Group IV of two positive- and five negative-reacting birds; and Group V of 13 positive- and 14 negative-reacting birds.

Collection of Feces

The positive-reacting hens were placed in coops with removable screen bottoms and metal dropping trays. Newspapers were spread in the trays to facilitate cleaning. Feces from the positive-reacting hens were collected each morning in individual enamel cups. No feces were collected when eggs had been laid and broken, allowing egg contents to mix with feces. After collection of feces, the soiled newspapers were replaced each morning with clean newspapers.

Feeding of Feces

The positive and negative birds were paired so that each non-reacting female received feces from the same positive hen throughout the experiment. The collected feces were moistened sufficiently with tap water to mould into pellets for feeding. Feedings were administered orally six mornings a week for eight weeks. The non-reacting birds in Groups I and II were held for 24 weeks following the last feeding of feces, and those in Groups III, IV and V for 8 weeks following the last feeding of feces, at the end of which time the birds were killed and necropsied. Groups I, II, III and IV received 25 grams of moistened feces at each feeding and Group V received 15 grams at each feeding.

Data in Table 6 show the numbers of positive-reacting hens and their maximum agglutination titres at the beginning of the experiment, the numbers of the non-reacting birds, the number of feedings each bird received, and their maximum agglutination titres exhibited during the experiment.

All hens were tested at bi-weekly intervals by the tube agglutination test, except Group V which was tested at weekly intervals.

Results

Group I. Seven of the eight non-reacting birds remained negative to the tube agglutination test throughout the experiment, and *S. pullorum* was not isolated on necropsy. The eighth hen (39348) developed agglutinins during the fifth week and later a maximum agglutination titre of 1:5120 was attained. The bird died on the 49th day after the last feeding. *S. pullorum* was isolated from the pericardial fluid, liver, spleen and ovary.

Group II. All of the non-reacting hens remained negative to the tube agglutination test throughout the experiment, and *S. pullorum* was not isolated on necropsy.

Group III. Eight of the ten non-reacting birds remained negative throughout the experiment, and *S. pullorum* was not isolated on necropsy. The remaining two birds (60971 and 60975) developed agglutinins during the second and fourth weeks, respectively. The maximum agglutination titres exhibited by hens 60971 and 60975 were 1:2560 and 1:5120, respectively. *S. pullorum* was isolated from the ovary and spleen of 60971 and from the ovary of 60975.

	60965	1,280	99387	21	0
			99388	Control	0

Group IV. The five non-reacting birds in this group were so divided that two were assigned to each of two positive-reacting birds, the fifth non-reacting bird being retained as a control. The positive-reacting birds used in this group were two whose corresponding non-reacting birds in Group III developed agglutinins and yielded *S. pullorum* on necropsy. The control and three of the four non-reacting birds receiving feces remained negative to the tube agglutination test throughout the experiment, and *S. pullorum* was not isolated on necropsy. Bird 60984 first reacted during the fourth week and later developed an agglutination titre of 1:5120. *S. pullorum* was isolated from the peritoneum, ovary and an abdominal cyst.

Group V. Bird 99382 died during the first week of the experiment and *S. pullorum* was not isolated on necropsy. Of the remaining 13 non-reacting birds 11 remained negative to the tube agglutination test throughout the experiment, and *S. pullorum* was not isolated on necropsy. Birds 99380 and 99381 revealed an agglutination titre during the ninth and fourteenth weeks, respectively. The maximum agglutination titres for birds 99380 and 99381 were 1:5120 and 1:1280, respectively. Bird 99381 revealed no gross lesions, and *S. pullorum* was not isolated. *S. pullorum* was isolated from the pericardial fluid, peritoneum, and ovary of bird 99380.

Conclusions

1. While the incidence of infection is small, it is apparent that feces from positive-reacting birds when force-fed to non-reacting birds may act as a vehicle of transmission for pullorum disease.
2. There is no apparent direct correlation between the agglutination titre of the infected birds and the infectivity of their feces to transmit the disease to susceptible fowl. Of the six positive-reacting birds whose corresponding non-reacting birds developed agglutinins, four exhibited a relatively low agglutination titre.

AGRICULTURAL EXPERIMENT STATION

Control Series

Bulletin No. 79

September, 1935

Inspection of Commercial Feedstuffs

By Philip H. Smith

This is the forty-first report of feeding stuffs inspection and presents the results of the analyses of 1651 samples of feeding stuffs intended for live stock and poultry consumption, collected during the year ending September 1, 1935. In addition will be found the analyses of 25 tinned dog foods offered for sale in Massachusetts.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

The past season has proved uneventful in the feed industry for conditions pertaining to inspection and quality. While it is probably true that the importation of feeds has exceeded that of any preceding season, insofar as has been determined they have been on a par with like products of domestic origin. The chief problem has been to secure proper registration of importations. There is no good reason why importers should not register when they sell in direct competition with domestic producers who comply with the statute in every particular.

The Massachusetts Control Service has not as yet been able to attack the problems presented through the sale of cod liver oil and other vitamin carriers. A start has been made in the partial equipment of a biological laboratory. Just how far the project can be carried will depend upon money made available with which to carry on the work.

In an attempt to answer some of the inquiries received for information about canned dog foods, twenty-five of the brands commonly sold in Massachusetts were collected and analyzed. The results appear elsewhere in this bulletin.

Of the 1,651 samples of feeding stuffs collected, 73, or 4.4 per cent, are listed as varying from guaranteed analysis. Variations of less than one per cent below minimum guarantee in protein and fat or of less than one per cent above maximum guarantee of fiber are not tabulated in the table of deficiencies. The rate of deficiencies as reported in the last bulletin was 5.9 per cent. It is probably true that most of the deficiencies occur not because of intent to defraud, but rather because of lack of proper chemical control of operations.

During the past year 1,021 brands of feed have been registered for sale by 212 manufacturers and dealers; 1,651 samples of feeding stuffs have been collected and subjected to analysis; 178 dealers located in 105 towns have been visited by the feed inspector at least once.

¹The following staff members assisted in the inspection: Albert F. Spelman and John W. Kuzmeski, Chemists; Frederick A. McLaughlin, Microscopist; James T. Howard, Inspector; Cora B. Grover, Clerk.

Certified Ingredients.

Allied Mills, Inc.

Empire 24% Dairy Ration

Corn distillers' dried grains, brewers' dried grains, soybean oil meal, corn gluten feed, corn gluten meal, cottonseed oil meal, corn meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 1% ground limestone and 1% salt.

Empire 20% Dairy Ration

Corn distillers' dried grains, brewers' dried grains, soybean oil meal, corn gluten feed, corn gluten meal, cottonseed oil meal, corn meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 1% ground limestone and 1% salt.

Empire 16½% Dairy Ration

Corn distillers' dried grains, brewers' dried grains, soybean oil meal, corn gluten feed, corn gluten meal, cottonseed oil meal, corn meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 1% ground limestone and 1% salt.

Empire Egg Mash

Dried buttermilk, dried skim milk, meat scraps, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn gluten feed, corn meal, fine ground oats, 1% ground limestone and 1% salt.

Empire Egg Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn gluten feed, corn meal, fine ground oats, 1% ground limestone, 1% salt and sardine oil.

Empire Growing Mash

Corn meal, wheat bran, soybean oil meal, fine ground oats, meat scraps, wheat standard middlings, choice alfalfa meal, corn gluten feed, dried skim milk, dried buttermilk, 1% salt and 1% ground limestone.

Empire Starter & Grower with Sardine Oil

Corn meal, fine ground oats, soybean oil meal, fish meal, meat scraps, wheat standard middlings, wheat bran, choice alfalfa meal, dried skim milk, dried buttermilk, 1.5% ground limestone, 0.04% iron oxide, 0.0005% potassium iodide, 0.25% salt and sardine oil.

Wayne All Mash Laying Ration

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat flour middlings, wheat bran, corn meal, fine ground oats, choice alfalfa meal, soybean oil meal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Amco 24% Dairy Ration

Cottonseed meal, corn gluten meal, corn distillers' dried grains, brewers' dried grains, corn gluten feed, old process linseed oil meal, soybean oil meal, peanut oil meal, ground oats, corn meal, wheat bran, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Wayne Amco 20% Dairy Ration

Cottonseed meal, brewers' dried grains, corn distillers' dried grains, ground oats, corn gluten feed, corn meal, soybean oil meal, corn gluten meal, old process linseed oil meal, wheat bran, cane molasses, 1% steamed bone meal, 1% ground limestone and 1% salt.

Wayne Amco 32% Supplement Dairy Ration

Soybean oil meal, corn gluten meal, corn distillers' dried grains, cottonseed meal, peanut oil meal, corn gluten feed, old process linseed oil meal, wheat bran, cane molasses, 1% steamed bone meal, 2% ground limestone and 1% salt.

Wayne Breeder Mash

Fish meal, meat scraps, dried buttermilk, dried skim milk, soybean oil meal, choice alfalfa meal, wheat bran, corn meal, corn germ oil meal, wheat standard middlings, fine ground oats, crab meal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Broiler Ration

Dried buttermilk, dried skim milk, meat scraps, fish meal, ground yellow corn, fine ground oats, wheat standard middlings, wheat bran, soybean oil meal, choice alfalfa meal, 1.5% ground limestone, 0.04% iron oxide, 0.0005% potassium iodide, 0.25% salt and sardine oil.

Wayne Chick Starter

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat bran, corn meal, fine ground oat meal, corn gluten feed, choice alfalfa meal, soybean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Egg Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat bran, corn meal, fine ground oat meal, corn gluten feed, choice alfalfa meal, soybean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Growing Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne 26% Mash Supplement

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, peanut oil meal, wheat bran, corn gluten meal, corn gluten feed, choice alfalfa meal, soybean oil meal, 3% ground limestone, 0.15% iron oxide, 0.002% potassium iodide and 0.5% salt.

Wayne Poultry Fattener

Ground yellow corn, corn germ oil meal, white hominy feed, rolled oats, oat flour, fine ground oats, wheat standard middlings, wheat red dog, old process linseed oil meal, and 1% salt.

Wayne Turkey Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1% charcoal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne 25% Turkey Starting Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, choice alfalfa meal, soybean oil meal, wheat bran, fine ground oats, 1% charcoal, 2% ground limestone, 0.15% iron oxide, 0.002% potassium iodide, 0.5% salt and sardine oil.

A. P. Ames Co.**20% Balanced Ration**

Corn meal, hominy, wheat bran, wheat middlings, reground oat feed with molasses, gluten feed, linseed meal, cotton seed meal, calcium carbonate, salt, bone meal.

Ames Complete Starter and Broiler Ration

Fortified cod liver oil, dried skim milk, oat meal, ground oats, corn meal, wheat bran, wheat middlings, alfalfa meal, meat scraps, fish meal, calcium carbonate and salt.

Ames Egg Mash, with Cod Liver Oil

Dried milk, corn meal, wheat bran, wheat middlings, ground oat groats, meat scraps, fish meal, alfalfa meal, calcium carbonate, salt and Nopco XX Vitamin Concentrate.

Ames Growing Mash, with Cod Liver Oil

Dried milk, oat meal, ground oats, corn meal, wheat bran, wheat middlings, meat scraps, fish meal, alfalfa meal, cod liver oil, calcium carbonate, salt.

Arcady Farms Milling Co.**Arcady 24% Open Formula Production Ration**

Soy bean oil meal, cottonseed meal, o. p. linseed oil meal, standard wheat bran, corn gluten feed, corn gluten meal, ground white oats, corn meal, brewers dried grains, malt sprouts, alfalfa meal, molasses, 1% steamed bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady 20% Open Formula Production Ration

Soy bean oil meal, cottonseed meal, o. p. linseed oil meal, standard wheat bran, brewers dried grains, corn gluten feed, corn gluten meal, ground white oats, corn meal, cane molasses, 1% steamed bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady Sweet 16 Dairy Feed

Wheat bran, soy bean oil meal, corn gluten meal, o. p. linseed oil meal, distillers corn dried grains, brewers dried grains, corn gluten feed, cleaned ground and bolted wheat screenings, ground and bolted oat mill feed (oat hulls, oat shorts, oat middlings), cottonseed meal, molasses, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Arcady-Wonder Complete All Mash Chick Starter

Fish meal, meat scraps, animal liver meal, corn meal, wheat middlings, ground oats, ground oat groats, alfalfa leaf meal, dried buttermilk, fortified cod liver oil, steamed bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt, $\frac{3}{4}$ oz. potassium iodide per ton.

Old Colony Feed

Cottonseed meal, soy bean oil meal, hominy feed, corn gluten feed, o. p. linseed oil meal, distillers corn dried grains, dried beet pulp, wheat bran, wheat middlings, ground oats, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Peerless Milk Ration

Cottonseed meal, soy bean oil meal, corn gluten meal, o. p. linseed oil meal, corn gluten feed, wheat bran, distillers corn dried grains, brewers dried grains, cleaned ground and bolted wheat screenings, ground and bolted oat mill feed (oat hulls, oat shorts, oat middlings), malt sprouts, molasses, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt.

Sunkist Egg Mash

Dried buttermilk, meat scraps, gluten feed, ground yellow corn, wheat bran, fine ground oats, wheat middlings, alfalfa meal, fortified cod liver oil, 1% calcium carbonate from limestone, 1% salt.

E. W. Bailey & Co.**Capital Dairy Ration Sweetened with Molasses**

Corn gluten feed, linseed oil meal, hominy feed, 43% cottonseed meal, ground oats, wheat bran, corn meal, edible bone meal, calcium carbonate, fine salt, molasses, soy bean meal.

Beacon Milling Co., Inc.

Auburn Brand Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soy bean oil meal, ground oats, corn meal, ground grain screenings, cotton seed meal, wheat bran, ground barley, brewer's dried grains, corn distiller's dried grains, molasses, 1% salt, 1% calcium carbonate, 1% calcium phosphate.

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewer's dried grains, corn distiller's dried grains, wheat bran (may contain mill run screenings), ground oats, ground barley, molasses, 1% salt, 1% calcium carbonate.

Beacon "20"

Old process linseed oil meal, cottonseed meal, soy bean oil meal, corn gluten feed, corn gluten meal, corn meal, wheat bran (may contain mill run screenings), corn distiller's dried grains, ground oats, ground barley, 1% salt, 1% calcium phosphate, 1% calcium carbonate.

Beacon Sweet "20"

Old process linseed oil meal, soy bean oil meal, corn distiller's dried grains, cottonseed meal, wheat bran, wheat middlings, brewer's dried grains, corn gluten meal, corn gluten feed, ground barley, corn meal, ground oats, molasses, 1% calcium carbonate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Breeders Mash with Buttermilk

Dried skimmilk, dried buttermilk, meat scrap, fish meal, alfalfa leaf meal, corn meal, pulverized heavy oats, pulverized heavy barley, wheat bran, wheat middlings, anti-rachitic oil, $\frac{1}{2}\%$ fine salt, $3\frac{1}{4}\%$ calcium carbonate, $\frac{3}{4}\%$ calcium phosphate, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals. (Wheat bran or middlings may contain mill run screenings.)

Beacon Broiler Feed

Dried skimmilk, meat scrap, fish meal, ground corn, pulverized heavy oats, pulverized heavy barley, wheat bran (may contain mill run screenings), wheat red dog, alfalfa leaf meal, anti-rachitic oil, $\frac{1}{2}\%$ salt, 2% calcium carbonate, $\frac{1}{2}\%$ calcium phosphate.

Beacon Complete Starting Ration

Dried skimmilk, meat scrap, fish meal, ground corn, ground hulled oats, pulverized heavy oats, pulverized heavy barley, wheat bran (may contain mill run screenings), wheat red dog flour, alfalfa leaf meal, anti-rachitic oil, $2\frac{1}{2}\%$ calcium carbonate, $\frac{1}{2}\%$ calcium phosphate, $\frac{1}{2}\%$ salt.

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, ground oats, wheat bran, wheat middlings, 1% calcium carbonate, 1% calcium phosphate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Duck Growing Pellets

Meat scraps, fish meal, corn meal, pulverized heavy barley, pulverized heavy oats, wheat bran (may contain mill run screenings.) Wheat red dog, alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, $1\frac{1}{2}\%$ calcium carbonate, $\frac{1}{2}\%$ calcium phosphate, $\frac{1}{4}\%$ salt.

Beacon Egg Mash

Dried buttermilk, dried skimmilk, meat scrap, fish meal, pulverized heavy barley, pulverized heavy oats, corn meal, alfalfa leaf meal, wheat bran, wheat middlings, anti-rachitic oil, $3\frac{1}{4}\%$ calcium carbonate, $\frac{3}{4}\%$ calcium phosphate, $\frac{1}{2}\%$ fine salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals.) (Wheat bran or middlings may contain mill run screenings.)

Beacon Fleshing Pellets

Dried skimmilk, pulverized heavy oats, pulverized heavy barley, wheat low grade flour, corn meal, corn oil meal, wheat germ meal, anti-rachitic oil, $1\frac{1}{2}\%$ calcium carbonate, $\frac{1}{2}\%$ calcium phosphate, 1% salt.

Beacon Growing Mash

Dried skimmilk, meat scrap, fish meal, pulverized heavy oats, pulverized heavy barley, corn meal, wheat red dog, alfalfa leaf meal, wheat bran, wheat middlings, anti-rachitic oil, $3\frac{1}{4}\%$ calcium carbonate, $\frac{3}{4}\%$ calcium phosphate, $\frac{1}{2}\%$ salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon's Cayuga Laying Mash

Dried buttermilk, dried skimmilk, fish meal, meat scrap, corn meal, alfalfa leaf meal, wheat bran, wheat middlings, soy bean oil meal, pulverized heavy barley, corn gluten meal, pulverized heavy oats, anti-rachitic oil, $\frac{1}{2}\%$ salt, 3% calcium carbonate, 1% calcium phosphate. (Wheat bran or middlings may contain mill run screenings.)

Berkshire Coal & Grain Co.

Berkshire Hills Sweet Dairy Feed

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats, calcium carbonate, molasses and salt.

Green Mountain Dairy Ration

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats and barley, calcium carbonate, salt.

Green Mountain Laying Mash

Wheat bran, wheat middlings, linseed oil meal, corn meal, fine ground oats, alfalfa meal, meat scraps, bone meal, fish meal, dried skim milk, calcium carbonate, salt, Nopco cod liver oil.

Borden Grain Co.**Borden's Chick Starting Feed**

Wheat bran, wheat middlings, corn meal, ground oatmeal, alfalfa leaf meal, meat scrap, fish meal, dried milk, cod liver oil, calcium carbonate, salt, bone meal.

Borden's Dairy Feed

Wheat bran, wheat middlings, corn meal or hominy, gluten meal, cotton seed meal, gluten feed, linseed oil meal, calcium carbonate, bone meal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oatmeal, dried milk, cod liver oil, alfalfa leaf meal, fish meal, meat scrap, calcium carbonate, salt.

Geo. B. Brown**Brown's Dairy Feed**

Wheat bran, hominy feed, oat feed, cotton seed meal, calcium carbonate, corn meal, o. p. linseed meal, corn gluten feed, molasses, bone meal, and salt.

Brown's Egg Mash

Corn meal, wheat midds, ground oats, wheat bran, meat scraps, bone meal, dried milk, leaf alfalfa meal, charcoal, calcium carbonate, salt, cod liver oil.

Butman Feed Co.**Climax Laying Mash**

Corn meal, bran, middlings, ground oats, beef scraps, gluten, alfalfa meal, buttermilk, calcium carbonate, and salt.

Community Feed Stores, Inc.**Community Chick Mash**

Yellow corn meal or hominy, feeding oat meal, wheat bran, wheat middlings, red dog middlings, alfalfa meal, dried milk, choice meat scraps, fish meal, precipitated bone meal, calcium carbonate, cod liver oil, salt.

Community-20 Dairy Ration

Cottonseed meal 41%, corn distillers dried grains, soya bean meal, corn gluten feed, hominy or corn meal, ground oats, bran, molasses, salt, calcium carbonate.

Community Laying Mash

Yellow corn meal or hominy, pure ground oats, wheat bran, gluten, wheat middlings, choice meat scraps, soya bean meal, dried milk, alfalfa meal, salt, calcium carbonate, oyster shell meal, cod liver oil.

Hilltop-20 Dairy Ration

Cottonseed meal 41%, o. p. linseed oil meal, corn gluten feed, hominy or corn meal, oat mill feed, wheat bran, corn distillers dried grains, molasses, calcium carbonate, salt.

Nicolas Courcy**Courcy's Dairy Feed**

Bran, middlings, Buffalo gluten, Diamond gluten, 41% cottonseed, 34% linseed, meal or hominy, salt, calcite flour.

Courcy's Eastern Laying Mash

Corn meal, wheat bran, flour middlings, ground oats, 50% meat scraps, 58% fish meal, alfalfa leaf meal, dry skim milk, oyster shell meal, sardine oil, dicalcium phosphate, salt, with or without cod liver oil.

Courcy's Growing Feed

Wheat bran, middlings, yellow corn meal, feeding oat meal, 50% scraps, linseed oil meal, bone meal, fish meal, calcite flour, leaf meal, milk, salt, with 1% cod liver oil or without.

Cover & Palm Co.**The Perfect Dry Mash**

Alfalfa meal, hominy feed, corn meal, wheat bran, wheat middlings, gluten feed, linseed meal, meat scraps, ground oats, kaffir corn meal, salt, dried skim milk, calcium carbonate.

E. A. Cowee Co.**Coweco All Mash Ration**

Corn meal, ground wheat, cut oat groats, wheat bran, wheat middlings, soybean meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, ground barley, edible bone meal, calcium carbonate, salt, cod liver oil.

Coweco Growing Mash

Wheat bran, middlings, corn meal, oat meal, ground barley, soy bean meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, edible bone meal, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco Laying Mash

Wheat bran, middlings, oat meal, gluten feed, ground barley, soy bean meal, linseed oil meal, meat scraps, fish meal, corn meal, dried milk, alfalfa leaf meal, edible bone meal, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco 1925 Ration

Wheat bran, middlings, corn meal, cottonseed meal, gluten feed, linseed oil meal, cocoanut oil meal, hominy, ground oats, distillers grains, brewers grains, soy bean meal, edible bone meal, salt, calcium carbonate and molasses.

Coweco 20% Ration

Wheat bran, middlings, gluten feed, corn meal, distillers grains, linseed meal, soy bean meal, cocoanut oil meal, ground oats, cottonseed meal, brewers grains, malt sprouts, edible bone meal, calcium carbonate, salt and molasses.

Coweco Starting Mash

Wheat bran, middlings, corn meal, alfalfa leaf meal, oat meal, soy bean meal, fish meal, meat scraps, edible bone meal, dried milk, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco Lo-Price 20% Dairy Ration

Bran, middlings, ground oats, cottonseed meal, corn meal, cocoanut oil meal, linseed meal, ground barley, soy bean meal, distillers grains, bone meal, calcium carbonate, salt and molasses.

Coweco Sunrise 20% Dairy Ration

Wheat bran, middlings, gluten, brewers grains, cocoanut oil meal, distillers grains, soy bean meal, cottonseed meal, ground cleanings from corn, oats, wheat and barley, calcium carbonate, salt and molasses.

Coweco Sunrise Laying Mash

Wheat bran, middlings, corn meal, hominy, ground oats, ground barley, gluten, dried milk, soy bean meal, meat scraps, alfalfa meal, edible bone meal, calcium carbonate, salt, with or without cod liver oil.

Curley Brothers**Crystal All Grain Starting Food**

Pure dry buttermilk, cod liver oil, yellow corn meal, ground oat groats, red dog flour, bran, alfalfa leaf meal, cracked wheat, fine cracked corn, steelcut oatmeal, steamed edible bone meal, powdered charcoal, salt, calcium carbonate, white fish meal.

Crystal 24% Dairy Ration

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers grains, hominy feed, ground barley, ground oats, bran and middlings with mill run of screenings, edible bone meal, salt, calcium carbonate.

Crystal 20% Dairy Ration

Corn gluten feed, yellow corn meal, hominy feed, bran and middlings with mill run of screenings, cottonseed meal, linseed oil meal, beet pulp, steamed edible bone meal, calcium carbonate, salt.

Crystal Egg Mash

Linseed oil meal, yellow hominy feed, yellow corn meal, bran and middlings, with mill run of screenings, feeding oatmeal, red dog, alfalfa poultry greens, beef scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash

Cod liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran and middlings with mill run of screenings, feeding oatmeal, yellow hominy feed, yellow corn meal, calcium carbonate, salt.

Crystal Starting Food for Broilers

Yellow hominy feed, yellow corn meal, ground oat groats, bran, middlings, red dog flour, alfalfa poultry greens, meat scraps, white fish meal, dried skim milk, pure dry buttermilk, fine cracked corn, steelcut oatmeal, cracked wheat, calcium carbonate, steamed edible bone meal, salt, cod liver oil.

Cutler Co.**King Complete Chick and Broiler Ration**

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), ground oat groats, meat scraps, fish meal, alfalfa leaf meal, old process linseed oil meal, corn gluten meal, soybean oil meal, yellow corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

King Complete Laying Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, whole oat groats, ground yellow corn, ground oats, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

King Growing Feed

Dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, soybean oil meal, corn gluten meal, ground wheat, oats, barley, wheat bran, wheat middlings, wheat red dog, calcium carbonate and salt.

King 20 Dairy Feed Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

King 22 Milk Ration Sweetened

Old process linseed meal, cottonseed meal, corn gluten meal, corn gluten feed, wheat bran, wheat middlings, yellow corn meal, ground barley, ground oats, alfalfa meal, bone meal, calcium carbonate, pure cane molasses and dairy salt.

Delaware Mills, Inc.

Delaware Growing Mash

Dried skim milk, alfalfa leaf meal, meat scrap, fish meal, bone meal, linseed oil meal, corn gluten feed, corn meal, wheat bran, wheat middlings, wheat flour middlings, oat meal, wheat meal, phosphatic calcium carbonate, $\frac{1}{2}$ of 1% salt.

Delaware Sweet 24% Dairy Feed

Cane molasses, corn gluten feed, corn gluten meal, linseed oil meal, cottonseed meal, soyabean oil meal, hominy feed, peanut oil meal, corn meal, wheat bran, wheat middlings, salt, phosphatic calcium carbonate.

Delco 20% Dairy Feed

Dried beet pulp, linseed oil meal, corn gluten feed, corn gluten meal, soyabean oil meal, peanut oil meal, cottonseed meal, wheat bran, wheat middlings, hominy feed, ground oats, salt, phosphatic calcium carbonate.

Delco Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, corn gluten meal, cottonseed meal, soya bean oil meal, peanut oil meal, wheat bran, wheat middlings, hominy feed, ground oats, ground barley, phosphatic calcium carbonate, salt.

Indian Laying Mash

Dried skim milk, meat scrap, fish meal, bone meal, soya bean oil meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt, with or without cod liver oil.

Frank Diauto

Diauto's Fancy Chick Growing Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps 60%, dried skimmed milk, fish meal 50%, alfalfa leaf meal, ground oyster shells, common salt.

Diauto's Dairy Feed

Gluten feed, corn meal, ground oats, bran, linseed meal, cotton seed meal, salt.

Diauto's Special Egg Mash

Coarse yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps 60%, dried skimmed milk, fish meal 50%, alfalfa leaf meal, ground oyster shells, common salt.

F. Dichl & Son, Inc.

Diehl's Dairy Feed

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products, ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, Banner Feed, bone, dried milk, charcoal, fish scraps, gluten meal, linseed, meal, meat scraps, middlings and red dog.

Dietrich & Gambrill, Inc.

All Mash Starter & Grower

Corn meal, oat meal, wheat middlings, alfalfa leaf meal, malt flour, peanut meal, fish meal, dried buttermilk, cod liver oil, bone meal, 1% calcium carbonate, 1% salt.

D. & G. Turkey Growing Mash

Pure corn meal, wheat bran, wheat middlings, pulverized oats, oat meal, alfalfa meal, fine, soy bean meal, linseed oil meal, meat scraps, dried buttermilk, bone meal, calcium carbonate, salt.

Gambrill's 16% Dairy Feed

Cottonseed meal, peanut meal, gluten feed, wheat bran, corn feed meal, ground grain screenings from wheat, clipped oat byproducts, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt, brewers grains.

Gambrill's Fattening Mash

Reddog flour, corn meal, oat meal, linseed meal, meat scrap, bone meal, wheat bran, wheat middlings, malt flour, 1% salt.

East Bridgewater Farmers Exchange, Inc.

Special Dairy Feed

Brewers grains, wheat middlings, wheat bran, corn meal or hominy, ground oat., gluten meal, linseed meal, cotton seed meal, beet pulp, molasses, soy bean meal, distillers grains, and salt.

Special Growing Feed

Corn meal, wheat bran, wheat middlings, reddog flour, alfalfa leaf meal, dried milk, choice fine ground beef scraps, fortified cod liver oil, ground oats, ground barley, ground wheat, fish scraps.

Special Mash Feed

Yellow corn meal, wheat bran, wheat middlings, reddog flour, fine ground beef scraps, alfalfa leaf meal, ground oats, dried milk, ground barley, ground wheat, fortified cod liver oil.

Eastern Grain Co.

Eastern 24% Dairy Ration Sweetened

Bran, middlings, cottonseed, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten, brewers grains, ground barley, corn meal, hominy, pure cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Eastern 20% Dairy Ration Sweetened

Bran, middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten, brewers grains, ground barley, corn meal, cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, hominy, salt.

Eastern States Farmers' Exchange

Eastern States Combination Mash

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground oats, dried skimmed milk, alfalfa leaf meal, 50 per cent protein meat scraps, 58 per cent protein fish meal, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Controller Mash

Dried skimmed milk, E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), ground oat groats, oyster shell meal, salt, dicalcium phosphate, sardine oil.

Eastern States Developer

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground barley, E. S. ground oats, dried skimmed milk, 41% protein soybean oil meal, alfalfa leaf meal, 50% protein meat scraps, 58% protein fish meal, dicalcium phosphate, oyster shell meal, sardine oil, salt.

Eastern States Fattener Mash

E. S. yellow corn meal—attrition, corn oil meal, ground oat groats, dried skimmed milk, wheat standard middlings, wheat red dog, E. S. ground oats, 41 per cent protein soybean oil meal, salt.

Eastern States Fulpail Dairy Ration

Yellow hominy feed, distillers' corn dried grains, E. S. ground oats, wheat bran (may contain mill run wheat screenings), 41 per cent protein soybean oil meal, 41 per cent protein cottonseed meal prime quality, corn gluten feed, cane molasses, E. S. ground barley, dicalcium phosphate, salt.

Eastern States Highland 20 Dairy Ration

Distillers' corn dried grains, oat mill feed (oat hulls, oat shorts, oat middlings), 41 per cent protein cotton seed meal prime quality, yellow hominy feed, cane molasses, corn gluten feed 41 per cent protein soybean oil meal, E. S. ground barley, wheat bran (may contain mill run wheat screenings), calcium carbonate, salt.

Eastern States Highland 16 Dairy Ration

Yellow hominy feed, distillers' corn dried grains, oat mill feed (oat hulls, oat shorts, oat middlings), cane molasses, corn gluten feed, E. S. ground barley, wheat bran (may contain mill run wheat screenings), 41 per cent protein cottonseed meal prime quality, 41 per cent protein soybean oil meal, calcium carbonate, salt.

Eastern States Milkmore Dairy Ration

41 per cent protein cottonseed meal prime quality, distillers' corn dried grains, corn gluten feed, 41 per cent protein soybean oil meal, wheat bran (may contain mill run wheat screenings), yellow hominy feed, E. S. ground oats, cane molasses, dicalcium phosphate, salt.

Eastern States Producer 20

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, 50% protein meat scraps, E. S. ground oats, alfalfa leaf meal, dried skimmed milk, 58% protein fish meal, 41% protein soybean oil meal, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Producer Mash

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground oats, 50% protein meat scraps, 58% protein fish meal alfalfa leaf meal, dried skimmed milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Sixteen Dairy Ration

Yellow hominy feed, wheat bran (may contain mill run wheat screenings), E. S. ground oats, distillers' corn dried grains, cane molasses, corn gluten feed, E. S. ground barley, 41 per cent protein cotton seed meal prime quality, 41 per cent protein soybean oil meal, dicalcium phosphate, salt.

Eastern States Starting and Broiler Ration

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, ground oat groats, dried skimmed milk, alfalfa leaf meal, 50 per cent protein meat scraps, 58 per cent protein fish meal, oyster shell meal, salt, sardine oil, dicalcium phosphate.

Eastern States Turkey-Fat

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, ground oat groats, dried skimmed milk, E. S. ground oats, 50 per cent protein meat scraps, alfalfa leaf meal, 41 per cent protein soybean oil meal, corn gluten meal, oyster shell meal, dicalcium phosphate, salt.

Eastern States Turkey-Grow

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), wheat flour middlings, ground oat groats, 50 per cent protein meat scraps, alfalfa leaf meal, dried skimmed milk, 41 per cent protein soybean oil meal, 58 per cent protein fish meal, corn gluten meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Turkey-Start

E. S. yellow corn meal—attrition, wheat bran (may contain mill run wheat screenings), ground oat groats, wheat flour middlings, 50 percent protein meat scraps, 41 per cent protein soybean oil meal, corn gluten meal, dried skimmed milk, 58 per cent protein fish meal, alfalfa leaf meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Michael W. Ellis

The Ellis Dairy Feed

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers grains, cotton seed meal, oil meal, ground oats, calcite flour, salt, edible bone meal. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten feed, corn meal, rolled oats or feeding oatmeal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal, calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.

Elmore Complete Broiler Ration

Yellow corn meal, wheat bran, wheat middlings, oat meal flour, meat meal, edible bone meal, dried buttermilk, alfalfa leaf meal, cod liver oil, salt.

Elmore Egg Mash

20% dried buttermilk and meat scraps, also 2nd clear wheat flour, pure ground oats, wheat middlings, alfalfa leaf meal, corn meal or hominy feed, wheat bran, cod liver oil, not more than 1% calcium carbonate, salt, fish meal.

Elmore Eggmaker

Dried buttermilk, meat and bone meal, wheat bran, wheat red dog midds, corn meal, fish meal, ground oats, calcium carbonate, salt.

Elmore Milk Grains

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, molasses, calcium carbonate and salt, soybean oil meal.

Elmore Milk Grains Junior

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, calcium carbonate, salt, soybean oil meal, molasses.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cottonseed meal, wheat bran, coconut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Emco Feed

Wheat bran, wheat midds, linseed oil meal, beet pulp, corn gluten feed, corn meal or hominy feed, cotton seed meal, calcium carbonate, salt.

Granger 20% Dairy Ration

Wheat bran, wheat midds, ground barley, cottonseed meal, corn gluten feed, corn meal or hominy feed, soybean meal, cane molasses, reground wheat screenings, calcium carbonate, salt, ground oats, dried brewers' grains, copra oil meal.

John W. Eshelman & Sons

Eshelman Certified 20% Dairy Ration

Corn gluten feed, choice hominy feed, pure ground 38 lb. No. 2 white clipped oats, 34% o. p. oil meal, standard wheat bran, 41% pro. cottonseed meal, soybean oil meal, standard wheat middlings, corn distillers' dried grains, cane molasses, steamed bone meal, calcium carbonate, salt.

Eshelman Challenge Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, dried brewers' grains, corn distillers' grains, corn meal, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Conestoga 20 Dairy Feed

Cottonseed meal, wheat bran, cane molasses, corn gluten feed, dried brewers' grains, corn distillers' grains, soybean oil meal, o. p. oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, cottonseed meal, ground oats, corn gluten feed, cane molasses, dried brewers' grains, corn distillers' grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Pennsy 16 Dairy Feed

Wheat bran, cottonseed meal, cane molasses, corn gluten feed, dried brewers' grains, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, oat meal mill byproduct (oat midds, oat hulls, oat shorts), 1% bone meal, 1% salt, 1% calcium carbonate.

Eshelman Red Rose 24 Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, dried brewers' grains, corn distillers' grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Growing Mash

Wheat middlings, corn meal, wheat bran, meat scrap, pulverized oats, corn gluten feed, pure oat meal, hominy feed, o. p. oil meal, fish meal, 3% dried buttermilk, 2% fine alfalfa meal, 1% calcium carbonate, $\frac{3}{4}$ % salt, $\frac{3}{4}$ % fortified cod liver oil.

Farm Service Stores, Inc.**C Growing Mash**

Corn meal-or-hominy, mixed feed, ground oats, 45% meat scraps, dried milk, fish scraps, alfalfa meal, calcium carbonate, salt, cod liver oil.

Diamond A Dairy Ration

Corn meal-or-hominy, oil meal-or-soybean meal, corn gluten feed, wheat bran, dried grains, corn gluten meal, cottonseed meal, stock feed, salt, calcium carbonate.

Diamond C Dairy Feed

Wheat bran, wheat midds, corn meal-or-hominy, cottonseed meal, oil meal-or-soybean meal, beet pulp, gluten feed, gluten meal, salt.

New England Dairy Ration

Corn gluten meal, corn gluten feed, wheat bran, corn meal-or-hominy, oil meal-or-soybean meal, cottonseed meal, ground oats, ground limestone, salt, molasses.

North Star 20% Dairy Feed

Corn meal-or-hominy, ground oats, soy bean meal-or-oil meal, dried grains, ground grain screenings, wheat bran, corn gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt, beet pulp, corn gluten meal.

North Star Growing Mash

Corn meal-or-hominy, ground-or-pulverized oats, alfalfa meal, wheat midds, wheat bran, corn gluten feed, oil meal-or-soybean meal, calcium carbonate, meat scraps, bone meal, fish meal, salt, dried milk (with-or-without cod liver oil).

North Star Laying Mash

Corn meal-or-hominy, ground-or-pulverized oats, alfalfa meal, wheat midds, wheat bran, corn gluten feed, oil meal-or-soybean meal, calcium carbonate, meat scraps, bone meal, fish meal, dried milk, salt (with or without cod liver oil).

Flory Milling Co., Inc.**Flory's "All-Mash" Chick Starter**

Oatmeal, yellow corn meal, wheat bran, standard wheat middlings, choice fine alfalfa meal, dried tomato pulp, ground barley, dried buttermilk, milk sugar feed or dried whey (feeding), fish meal, meat scrap, crab meal, soybean meal, linseed oil meal, ground wheat, ground oats, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Blue Seal "All-Mash" Laying Ration

Pure corn meal, meat scrap, alfalfa leaf meal, fish meal, oatmeal, dried buttermilk, soybean meal, milk sugar feed or dried whey (feeding), ground barley, ground wheat, wheat bran, standard wheat middlings, crab meal, tomato pulp, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Dairy Feed

Cottonseed meal, o. p. oil meal, coconut oil meal, soybean meal, corn gluten feed, corn gluten meal, dried malt grains, alfalfa meal, wheat bran, standard wheat middlings, buckwheat middlings, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Growing Mash

Yellow corn meal, dried buttermilk, choice alfalfa meal, dried tomato pulp, ground white oats, ground barley, standard wheat middlings, wheat bran, corn gluten meal, meat scrap, fish meal, crab meal, soybean meal, linseed oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

Golden Egg Laying Mash

Dried buttermilk, meat scrap, fish meal, crab meal, dried tomato pulp, o. p. oil meal, soybean meal, yellow corn meal, wheat flour middlings, ground barley, wheat bran, ground white oats, choice alfalfa meal, corn gluten meal, milk sugar feed or dried whey (feeding), buckwheat middlings, coconut oil meal, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

National Dairy Feed

Dried malt grains, cocoa shell meal, corn gluten feed, standard wheat middlings, wheat bran, alfalfa meal, buckwheat middlings, cottonseed meal, reground oatfeed (oat middlings, oat shorts, oat hulls), coconut oil meal, reground grain screenings, sugar cane molasses, essential minerals (calcium carbonate, calcium sulphate, calcium phosphate, iron sulphate, sulphur, iodine and salt).

Record Dairy Feed

O. p. oil meal, cottonseed meal, soybean meal, corn gluten feed, buckwheat middlings, standard wheat middlings, wheat bran, dried malt grains, ground oats, molasses, alfalfa meal, coconut oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Sunray Laying Mash

Milk sugar feed or dried whey (feeding), meat scrap, alfalfa meal, wheat bran, standard wheat middlings, buckwheat middlings, ground oats, ground barley, corn meal, hominy, coconut oil meal, calcium carbonate, crab meal, fish meal, salt, cod liver oil.

Fred A. Fountain

Fountain's Buttermilk Laying Mash

Dry buttermilk or dry skim milk, beef scrap, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, fish meal, table salt.

Fountain's Buttermilk Starting Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, calcium carbonate, table salt.

Dean S. French

Special Mash or Poultry Feed

Wheat feed, corn meal, gluten feed, alfalfa meal, linseed meal, meat scraps, ground oats, charcoal, dried milk, salt, cod liver oil, ground bone.

Garland's Economy 20% Dairy Ration

Bran, middlings, meal, cottonseed meal, gluten feed, linseed meal, ground barley, dried brewers grains, soy bean meal, distillers grains, cocoanut oil meal, malt sprouts, bone meal, calcium carbonate, salt and molasses.

Garland's Economy Egg Mash

Wheat bran, middlings, corn meal, hominy, soy bean meal, gluten meal, pulverized oats, dried milk, beef scraps, ground alfalfa, calcium carbonate, bone meal, salt, cod liver oil and ground barley.

Garland's Fancy Chick Mash

Wheat bran, middlings, oat meal, corn meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, soy bean meal, bone meal, calcium carbonate, salt and cod liver oil. (With or without cane molasses.)

Garland's 24% Ration

Wheat bran, middlings, corn meal, hominy, gluten feed, linseed meal, cottonseed meal, soy bean meal, cocoanut oil meal, ground oats, brewers grains, distillers grains, bone meal, calcium carbonate, salt and cane molasses.

Royal Worcester Complete Ration

Gluten feed, linseed, ground oats, wheat bran, middlings, corn meal, cottonseed meal, soy bean meal, beet pulp, bone meal, calcium carbonate, salt and molasses.

General Mills, Inc.

Eventually Gold Medal Chick Ration

Wheat bran, wheat standard middlings, yellow corn meal, ground oat groats, alfalfa meal, meat and bone scraps, dried skim milk, dried buttermilk, ground limestone 2¼%, salt ½%, cod liver oil extract.

Eventually Gold Medal Dairy Ration

Wheat bran, wheat standard middlings, ground oats, yellow corn meal, corn gluten feed, cottonseed meal, linseed oil meal, ground limestone 2¾%, salt ¾%.

Eventually Gold Medal Egg Mash

Wheat bran, wheat standard middlings, yellow corn meal, ground oats, alfalfa meal, meat and bone scraps, dried skim milk, dried buttermilk, ground limestone 3%, salt 1%, cod liver oil extract.

Eventually Gold Medal Growing Mash

Wheat bran, wheat standard middlings, yellow corn meal, ground oats, alfalfa meal, meat and bone scraps, dried skim milk, dried buttermilk, ground limestone 2¼%, salt ¾%, cod liver oil extract.

W. K. Gilmore & Sons, Inc.

Conference Mash

Yellow corn meal, standard wheat bran, wheat flour middlings, pure ground oats, meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, milk, calcite flour, cod liver oil, dicalcium phosphate, salt.

Goode Grain Co.

Goode Starting & Growing Mash, New England Conference Formula

Yellow corn meal, wheat bran, wheat flour middlings, ground oats, meat scraps, fish meal, alfalfa leaf meal, dried skim or dried buttermilk, calcium carbonate, salt, cod liver oil.

Goode Laying Mash, Mass. Agri. College Formula

Coarse yellow corn meal, wheat bran, wheat middlings, ground oats, meat scraps, fish meal, alfalfa leaf meal, dried skim or buttermilk, calcium carbonate, salt, with and without cod liver oil.

D. H. Grandin Milling Co.

Grandin's Combined Chick and Broiler Ration

Dried buttermilk, ground meat and bone, fish meal, alfalfa leaf meal, wheat middlings, corn meal, hominy feed, ground hulled oats, ground wheat, ground barley, bone meal, calcium carbonate, salt and cod liver oil.

Grandin's 24% Balanced Dairy Ration

Distillers dried grains, cottonseed meal, coconut oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 24% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate, salt, soy bean oil meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 20% Dairy Feed

Linseed oil meal, cottonseed meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, cane molasses, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Growing Mash with Buttermilk

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Growing Mash with Buttermilk—Cod Liver Oil

Ground meat and bone, dried buttermilk, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, alfalfa meal, bone meal, calcium carbonate, salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate and a small percentage of salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Laying Mash with Buttermilk—Cod Liver Oil

Ground fish, ground meat and bone, corn gluten feed, corn gluten meal, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground oats, powdered buttermilk, alfalfa meal, calcium carbonate, a small percentage of salt and cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Milk Maker

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, beet pulp, steamed bone meal, calcium carbonate, salt and soy bean oil meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's 12 Twin Six 12 Dairy Feed

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, alfalfa meal, steamed bone meal, calcium carbonate, salt, and soy bean oil meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 12 Twin Six 12 Dairy Feed

Linseed oil meal, cottonseed meal, coconut oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, alfalfa meal, cane molasses, steamed bone meal, calcium carbonate, salt and soy bean oil meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

M-S (Money Saver) 20% Sweetened Dairy Feed

Cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, corn meal, corn feed meal, hominy feed, ground grain screenings, oat meal mill by-products (oat middlings, oat hulls, oat shorts), cane molasses, steamed bone meal, calcium carbonate and salt.

Great Atlantic & Pacific Tea Co.**Daily Egg Mash Feed**

Ground oats, ground barley, soybean oil meal, old process linseed oil meal, corn gluten meal, wheat standard middlings, wheat bran, alfalfa meal, corn feed meal, dried buttermilk, dried skim milk, meat and bone scrap, fish meal, flour middlings, cod liver oil, cod liver meal, calcium carbonate from limestone $2\frac{1}{2}\%$, steamed bone meal $1\frac{1}{2}\%$, salt $\frac{1}{2}$ of 1%, red iron oxide 1/10%, and .0015% potassium iodide.

Daily Growth Growing Mash

Meat and bone scrap, dried buttermilk, dried skimmed milk, wheat bran, alfalfa meal, wheat standard middlings, corn feed meal, ground oats, ground barley, old process linseed oil meal, corn gluten feed, cod liver oil, calcium carbonate from limestone 1%, steamed bone meal $\frac{3}{4}\%$, salt $\frac{1}{4}$ of 1%.

D. Harbeck**Welcome Dairy Feed**

Bran, beet pulp, cotton seed meal, corn gluten meal, ground oats, hominy or corn meal, oil meal, middlings, steamed bone meal, 1% salt.

Welcome Laying Mash

Corn meal, wheat bran, flour middlings, ground oats, meat scraps, fish meal, alfalfa leaf meal, dried skimmed milk or dried buttermilk, salt, shell flour, cod liver oil.

D. B. Hodgkins' Sons

Hodgkins' Dairy Ration

Wheat bran, hominy, ground oats, corn gluten feed, corn meal, cottonseed meal, soy bean meal, linseed meal, brewers grains, molasses, calcium carbonate, salt and beet pulp.

Hodgkins' Poultry Mash

Ground corn, oats, middlings and bran (with screenings not to exceed mill run), corn gluten feed, linseed meal, ground meat scraps, calcium carbonate, dried skim milk, dairy salt, fish meal, dried buttermilk, alfalfa leaf meal and charcoal, also with cod liver oil.

Horvitz Grain Co.

Make-M-Lay Laying Mash

Wheat bran, corn meal, gluten feed and gluten meal, ground oats, ground barley, red dog, wheat middlings, linseed meal, meat scraps, calcium carbonate, charcoal.

Wantmore Dairy Ration

Hominy feed or corn meal, wheat bran, ground oats, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, calcium carbonate, salt.

Wantmore Dairy Ration with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, calcium carbonate.

Wantmore 24% Sweetened Dairy Ration

Corn gluten meal, corn gluten feed, old process linseed meal, soybean oil meal, cottonseed meal, brewers grains, hominy, corn meal, ground oats, ground barley, wheat bran, wheat middlings, calcium carbonate, dairy salt, pure cane molasses.

R. B. Howlett

Ideal Poultry Mash

Wheat bran, yellow corn meal, meat scraps, wheat middlings, ground oats, dried milk, bone meal, alfalfa leaf meal, salt, fish meal.

Jaquith & Co.

Jaquith & Co. Dairy Ration

Wheat bran and middlings, cottonseed meal, oil meal, soya bean meal, salt, gluten feed, alfalfa, ground oats and corn, dried grains, molasses.

Jaquith & Co. Growing Mash

Ground corn, wheat and oats, soy bean meal, meat and bone meal, salt, buttermilk, alfalfa, Nopco XX cod liver oil, oil meal, shell meal.

Jaquith & Co. Laying Mash

Ground corn, wheat and oats, gluten feed, oil meal, meat scraps, buttermilk, soy bean meal, alfalfa meal, salt and Nopco XX cod liver oil.

Jersee Co.

Just Right Dairy Ration 20%

Corn gluten feed, ground oats, ground corn, wheat bran, oil meal, cottonseed meal, salt, calcium carbonate (limestone), bone meal, potassium iodide, anise, oxide iron, sugar, St. John's bread (locust bean meal).

Just Right Growing Mash

Standard middlings, feeding oat meal, corn meal, alfalfa meal, meat scraps, fish meal, bone meal, charcoal, calcium carbonate (limestone), powdered whole and skim milk, St. John's bread, starch, milk sugar, wheat red dog, oxide iron, di-calcium phosphate, anise, dried blood, iodized salt, yeast, cod liver oil.

Kasco Mills, Inc.

Apex Complete Grower

Corn meal, pulverized oats, wheat bran, wheat middlings, soy bean meal, linseed oil meal, alfalfa meal, meat scrap, fish meal, bone meal, dried skim milk, milk sugar feed (dried whey), $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Apex Laying Mash

Wheat bran, wheat middlings, corn meal, linseed oil meal, soy bean meal, pulverized oats, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed (dried whey), $\frac{3}{4}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Kasco All Mash Chick Food

Wheat reddog, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, dried skim milk, milk sugar feed (dried whey), $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Kasco All Mash Growing Food

Wheat reddog, pulverized oats, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, dried skim milk, milk sugar feed (dried whey), $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Kasco All Mash Laying Food

Corn meal, pulverized oats, oatmeal, wheat bran, wheat middlings, wheat reddog, linseed oil meal, soy bean meal, ground barley, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed (dried whey), $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Kasco Poultry Flushing Mash

Wheat reddog, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, milk sugar feed (dried whey), $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Larrowe Milling Co.**Larro**

Cottonseed meal, yellow corn meal, wheat standard middlings, soybean oil meal, o. p. linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, $\frac{3}{4}$ % salt.

Larro Chick Starter

Yellow corn meal, ground oat groats, wheat standard middlings, wheat bran, meat and bone scraps, dried buttermilk, dried skimmed milk, alfalfa meal, 1 $\frac{3}{4}$ % limestone, $\frac{1}{4}$ % salt, cod liver oil extract.

Larro Egg Mash

Wheat bran, wheat standard middlings, yellow corn meal, meat and bone scraps, ground barley, soybean oil meal, ground oats, alfalfa meal, dried skimmed milk, dried buttermilk, 2 $\frac{1}{2}$ % limestone, $\frac{1}{2}$ % salt, cod liver oil extract.

Larro Growing Mash

Yellow corn meal, wheat standard middlings, wheat bran, meat and bone scraps, alfalfa meal, ground oats, dried buttermilk, dried skimmed milk, soybean oil meal, 2% limestone, $\frac{1}{2}$ % salt, cod liver oil extract.

Larrowe's 16 Dairy Feed

Cottonseed meal, corn gluten feed, wheat standard middlings, o. p. linseed oil meal, yellow corn meal, dried beet pulp, wheat bran, 1% salt.

Mansfield Milling Co.**Mansfield Chick-Growing Feed**

Wheat bran, red dog flour, corn meal, oat meal, fish scraps, meat scraps, dried milk, charcoal, and cod liver oil.

Mansfield Cow-Ration

Wheat bran, corn meal, ground oats, ground barley, cotton seed meal, linseed meal, gluten feed, gluten meal and salt.

Mansfield Dry-Poultry Mash

Wheat bran, wheat middlings, red dog flour, corn meal, gluten feed, dried milk, meat scraps, alfalfa meal and cod liver oil.

Maritime Milling Co., Inc.**B-B Hi-Test Dairy Feed 24% Pro. Sweetened**

Dried brewers grains, cotton seed meal, corn gluten feed, soya bean meal, hominy feed, corn meal, ground oats, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B-B Hi-Test Dairy Feed 20% Pro. Sweetened

Dried brewers grains, cotton seed meal, corn gluten feed, soya bean oil meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B-B Marmico 16% Protein Dairy Feed with Molasses

Dried brewers grains, soya bean oil meal, cotton seed meal, corn gluten feed, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, oat hulls, oat shorts, oat midds, molasses, steamed bone meal, calcium carbonate and salt.

Sweetened Dollar \$ Maker 20% Pro. Dairy Feed

Dried brewers grains, soya bean oil meal, corn gluten feed, cotton seed meal, corn meal, hominy feed, wheat bran, ground oats, molasses, calcium carbonate, salt and steamed bone meal. (Wheat bran may contain ground screenings not exceeding mill run).

Dollar \$ Maker Egg Mash

Dried buttermilk, alfalfa meal, wheat bran, wheat middlings, soya bean oil meal, corn gluten feed, ground wheat, corn meal, pulverized barley, pulverized oats, meat meal, bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

Geo. Q. Moon & Co., Inc.**Moon's Baby Chick Starter Mash**

Roller corn meal, wheat middlings, our make white wheat middlings, fine ground alfalfa meal, meat scrap, bone meal, dried buttermilk, calcium carbonate, calcium phosphate, cod liver oil, $\frac{1}{2}$ of 1% salt, wheat bran, dried skim milk.

Moon's 24% Dairy Ration

Corn distillers grains, o. p. oil meal, corn gluten meal, cottonseed meal, corn gluten feed, wheat middlings and wheat bran (with ground screenings not to exceed mill run), dried brewers grains, calcium carbonate, $\frac{3}{4}$ of 1% salt, corn meal, soy bean meal, molasses, hominy, coconut oil meal.

Moon's 20% Dairy Feed with Molasses

O. p. oil meal, corn gluten meal, cottonseed meal, wheat bran and wheat middlings (with ground screenings not to exceed mill run), dried brewers grains, cleaned, ground and bolted wheat screenings, ground and bolted clipped oat by-product, molasses, corn gluten feed, calcium carbonate, $\frac{1}{2}$ of 1% salt, soy bean meal, hominy, coconut oil meal.

Moon's Growing Mash

Wheat bran, our make white wheat middlings, roller corn meal, fine ground alfalfa meal, meat scrap, bone meal, dried buttermilk, calcium carbonate, calcium phosphate, dried skim milk, cod liver oil.

Moon's Laying Mash

Wheat bran (with ground screenings not to exceed mill run), our make pure white wheat middlings, roller process corn meal, ground oats, fine ground pea green alfalfa meal, meat scrap, dried buttermilk, ground barley, ground buckwheat, calcium carbonate, calcium phosphate, corn gluten meal.

Special A Dairy 20% Ration

Corn gluten feed, cottonseed meal, oil meal, wheat bran, hominy, dried brewers grains, ground barley, calcium carbonate, calcium phosphate, $\frac{1}{2}$ of 1% salt, soybean meal, hominy, coconut oil meal.

Moon's Special A Laying Mash

Meat scrap, alfalfa meal, standard wheat middlings (with ground screenings not to exceed mill run), corn meal, ground barley, ground oats, ground buckwheat, calcium carbonate, calcium phosphate, $\frac{1}{2}$ of 1% salt, dried buttermilk, corn gluten meal.

U. S. 24% Dairy Ration

Corn gluten feed, cottonseed meal, rye distillers grains, ground grain screenings from wheat, coconut oil meal, ground and bolted clipped oat by-product, wheat bran (with ground screenings not to exceed mill run), corn meal, hominy feed, calcium carbonate, salt, molasses, soy bean meal.

U. S. 20% Dairy Ration

Corn gluten feed, cottonseed meal, coconut oil meal, bran, corn meal, corn distillers grains, rye distillers grains, oat feed, molasses, calcium carbonate, bone meal, salt, soybean oil meal.

U. S. Drought Ration

Corn gluten feed, rye distillers grains, brewers dried grains, wheat bran (with ground screenings not to exceed mill run), coconut oil meal, hominy feed and corn meal, oat feed (oat middlings, oat shorts, oat hulls), molasses, bone meal, steamed, 1% salt, calcium carbonate, soybean oil meal.

Ogden Grain Co.**Good Value 20% Dairy Ration**

Corn distillers' grains, soyabean oil meal, pure ground barley, yellow hominy or corn meal, o. p. linseed oil meal, 41% cottonseed meal, corn gluten feed, #2 38# ground oats, standard wheat bran, molasses, steamed bone meal, calcium carbonate, salt.

Good Value Laying Mash

Pulverized 36/38 No. 2 oats, meat scraps, fish meal, alfalfa leaf meal, No. 2 yellow corn meal, standard wheat bran, wheat flour middlings, dried skim milk, salt, calcium carbonate, cod liver oil.

Thrift Complete Laying Mash

Pulverized oats, meat scraps, dried skim milk, fish meal, corn meal, gluten meal, standard wheat bran, standard wheat middlings, cracked corn and wheat, cod liver oil, calcium carbonate, salt.

20% Thrift Dairy

Soyabean oil meal, old process linseed oil meal, gluten meal, corn meal, low fibre ground oats, cotton seed meal, standard wheat bran, standard wheat middlings, ground wheat screenings, molasses, calcium carbonate, salt.

Thrift Starting & Growing Mash

Corn meal, standard wheat bran, pulverized oats, flour middlings, dried skim milk, alfalfa meal, fish meal, meat scraps, calcium carbonate, salt, cod liver oil.

Park & Pollard Co.**Bidwell Dry-Mash with Cod Liver Oil**

Dried buttermilk, vitamin tested cod liver oil, alfalfa meal, corn meal, wheat bran, wheat middlings, fish meal, meat, bone, linseed oil meal, gluten meal, soya bean meal, calcium carbonate, salt and ground: wheat, barley, kaffir corn and buckwheat.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Lay or Bust Dry-Mash with Cod Liver Oil

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, corn gluten meal, iodol fish meal, meat, bone, linseed oil meal, soya bean meal, wheat bran and wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn, buckwheat.

Manamar Complete Life Cycle Mash

Kelp, Pacific Coast fish meal and marine sea shells, meat scrap, pure wheat bran, wheat middlings, alfalfa leaf meal, ground yellow corn, ground oats, vitamin tested cod liver oil.

Manamar 20% Dairy Ration

Kelp, Pacific Coast fish meal and marine sea shells, corn distillers grains, linseed oil meal, soya bean meal, malt sprouts, wheat bran, brewers dried grains, hominy feed, ground oats, molasses, calcium carbonate and salt.

Manamar Doublex 20% Dairy Ration

Kelp, Pacific Coast fish meal, marine sea shells, linseed oil meal, gluten feed, gluten meal, soya bean meal, ground barley, wheat bran, malt sprouts, cottonseed meal, hominy, fine ground grain screenings, molasses, calcium carbonate and salt.

Manamar Growing Feed

Kelp, Pacific Coast fish meal and marine sea shells, wheat bran, wheat middlings, meat scrap, ground oats, alfalfa leaf meal, ground yellow corn.

Manamar Lay or Bust Mash

Kelp, Pacific Coast fish meal and marine sea shells, dried buttermilk, meat scrap, alfalfa leaf meal, pure wheat bran, wheat middlings, ground yellow corn, ground oats, vitamin tested cod liver oil.

Milk-Maid 24% Sweetened Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, soya bean meal, wheat bran, brewers dried grains, malt sprouts, corn gluten meal, copra oil meal, corn meal, iodol fish meal, molasses, calcium carbonate and salt.

Overall 24% Dairy Ration

Corn gluten feed, linseed oil meal, cottonseed meal, distillers dried grains, wheat bran, wheat middlings, corn gluten meal, hominy feed, calcium carbonate and salt.

Top Notch 16% Ration

Corn distillers grains, ground barley, malt sprouts, linseed oil meal, cottonseed meal, fine ground grain screenings, soya bean meal, molasses, calcium carbonate and salt.

Yankee Dairy Ration

Corn gluten feed, cottonseed meal, wheat bran, wheat middlings, corn gluten meal, soya bean meal, linseed oil meal, ground oats, corn meal, brewers grains, molasses, calcium carbonate and salt.

George H. Parker Grain Co.**Parker's Egg Mash**

Yellow corn meal, wheat bran, wheat middlings, ground oats, feeding oat meal, dried skimmed milk, meat scraps, fish meal, alfalfa leaf meal, edible bone meal, calcium carbonate, charcoal, vitamin tested cod liver oil, and salt.

Parker's Special Dairy Ration

Wheat bran, yellow corn meal, hominy, old process linseed meal, soya bean meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, steamed bone meal, and salt.

W. N. Potter Grain Stores, Inc.**A. D. P. 24% Dairy Ration**

Ground corn, hominy, cottonseed meal, corn gluten meal, wheat bran, ground oats, oil meal, calcium carbonate, bone meal and salt.

Potter's Sweetened Dairy Ration

Gluten feed, hominy, linseed oil meal, ground oats, wheat bran, std. wheat middlings, cottonseed meal, corn distillers grains, molasses, calcium carbonate, bone meal and salt.

H. C. Puffer Co.**Egg-Em-On Growing Feed**

Corn feed meal, corn gluten feed, ground barley, ground oats, wheat bran, wheat middlings, meat scraps, dried milk, alfalfa meal.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings (not exceeding mill run of screenings), corn feed meal, corn gluten feed, ground oats, linseed meal, alfalfa meal, small percentage salt and calcium carbonate.

Egg-Em-On Starting Mash

Corn meal, wheat bran, wheat middlings, red dog middlings, ground oat groats, dried milk (skim or buttermilk), alfalfa leaf meal, fish meal, meat scraps, dicalcium phosphate, cod liver oil, calcium carbonate and salt.

Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, ground oats, corn feed meal or hominy meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Sweetened Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, corn feed meal or hominy meal, wheat bran and wheat middlings (not exceeding mill run of screenings), oat feed, molasses, small percentage salt and calcium carbonate.

Quaker Oats Co.**Quaker 16% Protein Dairy Ration**

Hominy feed, yellow hominy feed, cottonseed meal, soybean oil meal, corn gluten feed, wheat bran, wheat standard middlings, ground grain screenings from wheat, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, molasses.

Quaker Ful-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat standard middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Growing Mash

Oatmeal, yellow hominy feed, wheat bran, wheat standard middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Ralston Purina Co.**Protina 20% Dairy Feed**

Linseed meal, soy bean oil meal, cottonseed meal, gluten feed, wheat middlings (standard), alfalfa meal, wheat bran, ground grain screenings (from wheat, corn, oats, barley kafir), molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Protina 16% Dairy Feed

Linseed meal, soy bean oil meal, gluten feed, alfalfa meal, wheat middlings (standard), cottonseed meal, molasses, ground grain screenings (from wheat, corn, oats, barley, kafir), wheat bran, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Blue Checker Cow Chow (20%)

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings (standard), wheat bran, corn meal, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Body Cow Chow

Cottonseed meal, corn gluten feed, wheat middlings (standard), corn meal, wheat bran, ground grain screenings (from wheat, corn, oats, barley, kafir), molasses, 3% calcium carbonate (limestone), 1% iodized salt.

Purina Chick Growena

Dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, wheat germ, alfalfa meal, corn meal, beet pulp, grey wheat middlings, wheat bran, 1 $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt, Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Chick Startena

Dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, 1 $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt, Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Chicken Fatena

Ground oats, ground corn, corn germ meal, wheat flour (second clear), grey wheat middlings, linseed meal, meat scrap, rolled oats, $\frac{1}{2}$ % iodized salt.

Purina Egg Chowder

Dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, grey wheat middlings, wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone), Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Green Checker Cow Chow (24%)

Linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, wheat middlings (standard), wheat bran, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Growing Chow

Dried buttermilk, meat scrap, fish meal, soy bean oil meal, wheat germ, corn germ meal, grey wheat middlings, wheat bran, alfalfa meal, corn meal, 3% calcium carbonate (limestone), 1% iodized salt, Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Lay Chow

Dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, wheat middlings (standard), wheat bran, corn meal, molasses, 1% iodized salt, 3% calcium carbonate (limestone), Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Layena (Complete Ration)

Dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, alfalfa meal, wheat middlings (standard), wheat bran, beet pulp, corn meal, $\frac{1}{2}$ % iodized salt, 4% calcium carbonate (limestone), Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Turkey Growing & Fattening Chow

Meat scrap, soy bean oil meal, alfalfa meal, corn meal, wheat middlings (standard), wheat bran, molasses, $\frac{1}{2}$ % iodized salt, Pur-A-Tene (Pro-vitamin A-Carotene).

Purina Turkey Startena

Dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, alfalfa leaf meal, wheat germ, oat middlings, corn meal, soy bean oil meal, grey wheat middlings, wheat bran, $\frac{1}{2}$ % iodized salt, Pur-A-Tene (Pro-vitamin A-Carotene).

D. F. Riley**Riley's Laying Mash**

Wheat middlings, wheat bran, yellow corn meal, gluten feed, ground oats, beef scraps, fish meal, dried skim milk, o. p. oil meal, alfalfa leaf meal, calcium carbonate, salt, fortified cod liver oil.

Riley's 20% Ration

Gluten feed, wheat middlings, linseed oil meal, 41% cottonseed meal, wheat bran, dried brewer's grains, corn meal or hominy, bone meal, salt.

R. W. Ropes**Ropes Balanced Ration**

Corn meal, hominy, gluten meal and feed, cotton seed meal, bran, oil meal, beet pulp, alfalfa meal, oat feed, oat meal, molasses, edible bone meal, calcite flour, salt.

Ropes Sweet Ration

Hominy, bran, cotton seed meal, oat feed, gluten feed, gluten meal, rye meal, corn meal, alfalfa meal, molasses, calcium carbonate, salt.

Ryther & Warren**Blue Tag Dairy Ration**

41% cottonseed meal, old process linseed oil meal, corn gluten feed, white hominy (or corn meal), standard bran, standard middlings, ground oats, dried beet pulp, calc. carbonate 1 per cent and salt, $\frac{1}{2}$ of per cent.

Minot Chick Mash, Starting and Growing Feed

Yellow corn meal, wheat bran, flour middlings, ground oat meal, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, Nopco XX cod liver oil.

Minot Milk Egg Mash

Yellow corn meal, wheat bran, flour middlings, ground 40-lb. oats, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, Nopco XX cod liver oil.

Minot Poultry Mash

Wheat bran, wheat middlings, red dog middlings, corn meal, gluten feed, alfalfa meal, ground oats, meat scraps, fish meal, $\frac{1}{2}$ of 1 per cent salt.

Minot Special Dairy Ration

Wheat bran, ground oats, gluten feed, 41% cottonseed meal, hominy feed (or corn meal), dried brewers grains, oil meal, rye feed, salt and lime.

St. Albans Grain Co.**Hygrade 24 Sweetened Milk Ration**

Corn gluten meal, corn gluten feed, old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, calcium carbonate, dairy salt and pure cane molasses.

Hygrade 20 Sweetened Milk Ration

Old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, calcium carbonate and dairy salt.

Utility Dairy Ration

Old process linseed meal, soybean oil meal, corn gluten feed, cottonseed meal, corn meal, hominy feed, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, pure cane molasses and dairy salt.

Wirthmore Baby Chick Starter

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), alfalfa leaf meal, fish meal, meat scraps, corn gluten meal, soybean oil meal, old process linseed oil meal, pure wheat bran, pure wheat middlings, ground hulled oats, ground wheat, yellow corn meal, corn germ meal, calcium carbonate and salt.

Wirthmore 25 Balanced Ration Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Complete Chick and Broiler Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), ground oat groats, meat scraps, fish meal, alfalfa leaf meal, old process linseed oil meal, corn gluten meal, soybean oil meal, yellow corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore Complete Growing Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, soybean oil meal, corn gluten meal, ground yellow corn, ground wheat, ground oats, ground barley, wheat bran, wheat middlings, alfalfa leaf meal, calcium carbonate and salt.

Wirthmore Complete Laying Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, whole oat groats, ground yellow corn, ground oats, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore 20 Dairy Feed

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, wheat middlings, wheat bran, edible bone meal and dairy salt.

Wirthmore 20 Dairy Feed Sweetened

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, brewers' dried grains, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore Laying Mash

Dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa meal, linseed meal, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, ground wheat, oats, barley, buckwheat, calcium carbonate and salt.

Wirthmore Pellets

Dried skim milk, meat scraps, soybean oil meal, corn germ meal, feeding oat meal, wheat bran, wheat middlings, wheat red dog flour, yellow corn meal, alfalfa meal, calcium carbonate, salt, cod liver oil, molasses.

Wirthmore Turkey Growing Ration

Fortified cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, soybean oil meal, alfalfa meal, yellow corn meal, fine ground oats, barley, wheat, wheat bran, wheat middlings, wheat flour middlings, calcium carbonate and salt.

C. H. Symmes**The Ideal Dairy Ration**

Wheat middlings, wheat bran, brewers grains, cottonseed meal, linseed meal, gluten meal, gluten feed, corn meal or hominy, salt, molasses, bone meal, calcium carbonate, ground barley.

Syracuse Milling Co.**Syracold Dairy Feed, Sweetened**

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, brewers' dried grains, molasses, calcium carbonate and salt.

Tioga-Empire Feed Mills, Inc.**E-Gee Dairy Feed**

Cane molasses, wheat bran, wheat middlings, corn distillers grains, corn gluten feed, palm kernel oil meal, coconut oil meal, cottonseed meal, peanut oil meal, soybean oil meal, malt sprouts, brewers dried grains, salt, phosphate of lime, charcoal, iodine. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Neverfail Full Feed

Wheat middlings, wheat bran, hominy feed, corn meal, soybean oil meal, corn gluten meal, pulverized oats, fish meal, meat and bone scrap, dried skim milk, phosphate of lime, cod liver oil, ground wheat, alfalfa leaf meal, calcium carbonate, salt. (Wheat middlings and wheat bran may contain ground screenings not exceeding mill run.)

Red Brand Tioga Dairy Feed

Cottonseed meal, corn gluten feed, wheat bran, wheat middlings, cane molasses, coconut oil meal, palm kernel oil meal, brewers dried grains, malt sprouts, soybean oil meal, peanut oil meal, corn distillers grains, salt, phosphate of lime, charcoal, iodine. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Ti-O-Ga Laying Food

Wheat middlings, corn meal, wheat bran, pulverized oats, fish meal, soybean oil meal, corn gluten meal, meat and bone scrap, dried skim milk, phosphate of lime, linseed oil meal, hominy feed, alfalfa leaf meal, calcium carbonate, salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

United Cooperative Farmers, Inc.**United Farmers Milk Pep**

Choice cottonseed meal, old pro. linseed meal, choice yellow hominy, corn gluten feed, pure gr. oats (No. 2-38 cl-un), soy bean oil meal, stand. wheat bran, corn dist. dried grains, molasses, steamed bone meal, calcium carbonate, salt.

United Farmers Milkmaker

Choice yel. hominy, pure gr. oats (No. 2-38 cl-un), stand. wheat bran, choice cottonseed meal, old pro. linseed oil meal, corn gluten feed, soy bean oil meal, molasses, corn dist. dried grains, steamed bone meal, calcium carbonate, salt.

Unity Feeds, Inc.**Paymaster 20% Dairy Ration**

Distillers dried grains, corn gluten feed, soya bean meal, brewers dried grains, malt sprouts, linseed oil meal, cottonseed meal, wheat bran, wheat middlings, corn meal, molasses, calcium carbonate and salt.

Unity Laying Mash

Dried buttermilk, alfalfa leaf meal, soya bean meal, fish meal, meat scraps, linseed oil meal, wheat bran, wheat middlings, ground oats, ground wheat, corn meal, calcium carbonate and salt.

C. P. Washburn Co.

"Made-Right" Balanced Ration

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewers grains.

"Made Right" Complete Layer

Fortified cod liver oil, dried milk, corn meal, bran, middlings, oat meal, high grade meat scraps, fish meal, ground wheat, soya bean meal, gluten, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, minerals, iron oxide, iodine.

"Made Right" Sweet Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, linseed oil meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grain.

"Made Right" Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, gr. oatmeal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dried skim milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

"Made Right" Starting and Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, gr. wheat, soya bean meal, fish meal, dried skim milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

Wayne County Crangers Feed Corp.

Sweetened 16% Dairy Feed

Choice c/s meal, 34% oil meal, corn gluten feed, re-cleaned grain screenings, wheat bran, gr. oats, corn meal, malt sprouts, cane molasses, cocoa meal, 1% salt, essential minerals, soybean oil meal, iodine, iron sulphate, bone charcoal.

Galen 24% Dairy Feed

Corn gluten feed, choice c/s meal, brewers grains, wheat bran (may contain screenings), malt sprouts, gr. oats, soybean oil meal, hominy feed and corn meal, cane molasses, cocoa oil meal, steam bone meal, gr. limestone, 1% salt.

Superior Growing Mash

Cornmeal, hominy feed, soybean oil meal, oatmeal, ground barley, wheat bran (may contain screenings), flour midds, buttermilk, alfalfa leaf meal, meat scrap, fish meal, cod liver oil USP, essential minerals, iodine, iron sulphate, calcium carbonate, bone charcoal, iodine potassium, salt.

Superior Laying Mash

Meat scrap, bone meal, fish meal, buttermilk, cod liver oil, gr. corn, wheat, oats, barley, red dog wheat flour, wheat bran, wheat middlings (may contain screenings), corn gluten feed, alfalfa meal, 1/2 of 1% salt, essential minerals, iodine, iron sulphate, calcium carbonate, bone charcoal.

H. K. Webster Co.

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, cod liver oil.

Blue Seal Chick Starter

No. 2 yellow corn meal, ground fancy wheat, fine ground heavy oats, ground barley, corn gluten meal, pure wheat bran, wheat flour middlings, high grade meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, calcium carbonate, salt, cod liver oil.

Blue Seal College Mash Fortified with Cod Liver Oil

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, 55% codfish meal, alfalfa leaf meal, dried skim milk, calcium carbonate, salt, cod liver oil.

Blue Seal "20" Dairy Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, gluten feed, choice cottonseed meal, hominy feed, wheat bran, corn distillers' grains, brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate and salt).

Blue Seal Egg Mash

Corn meal, fine ground heavy oats, pure wheat bran, pure wheat middlings, high grade meat scraps, dried skim milk, alfalfa leaf meal, P. R. cane molasses, gluten meal, calcium carbonate, salt, cod liver oil.

Blue Seal Growing Mash

Dried skim milk, dried buttermilk, h. g. meat scraps, 55% fish meal, alfalfa leaf meal, gluten meal, No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground oats, ground barley, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Hom-Mix 24% Dairy Ration

Choice cottonseed meal, soy bean oil meal, malt sprouts, gluten meal, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, and salt).

Blue Seal Improved All-Mash Ration

Coarse ground No. 2 yel. corn, ground fancy wheat, fine ground heavy oats, pure wheat bran, wheat flour middlings, h. g. meat scraps, 55% codfish meal, dried skim milk, alfalfa leaf meal, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Improved Balanced Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, gluten meal, choice cottonseed meal, hominy feed, wheat bran, corn distillers' grains, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate and salt).

Blue Seal Special 20% Dairy Ration

Choice cottonseed meal, soy bean oil meal, malt sprouts, gluten feed, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate and salt).

West-Nesbitt, Inc.**Pure Feed Egg Mash**

Corn meal, oat flour, wheat bran, wheat flour middlings, leaf alfalfa meal, dried skim milk, meat scraps, fish meal, steamed bone meal, 1% calcium carbonate, cod liver oil, kelp meal.

Special 20 Per Cent Dairy Ration

Choice 41% cottonseed meal, soyabean meal, corn gluten feed, corn gluten meal, rye distillers grains, corn meal, wheat bran, oatmeal mill by-product (oat middlings, oat shorts, oat hulls), pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Super Pure Sweetfeed Dairy Ration

Corn gluten feed, corn distillers' dried grains, soya bean meal, choice cottonseed meal, old process linseed oil meal, wheat bran, hominy or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt. Bran may contain screenings not to exceed mill run.

Est. M. G. Williams**Williams Balanced Ration**

Corn meal or hominy, linseed oil meal, cotton seed meal, ground oats, gluten feed, dried brewers grains, wheat feed, calcium carbonate and salt.

Williams Laying Mash

Corn meal, bran, middlings, ground oats, meat scraps, leaf meal, dried skim milk, calcium carbonate, salt and cod liver oil.

Stanley Wood Grain Co.**Bliss Dairy Ration**

Corn meal (or hominy), cottonseed meal, wheat bran, linseed meal, wheat middlings, gluten meal, gluten feed, table salt, edible bonemeal, calcium carbonate, (beet pulp).

Preferred Laying Mash

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, yellow corn meal, wheat bran, pulverized oats, wheat middlings, edible bonemeal, table salt, calcium carbonate.

Woods Dairy Ration

Cottonseed meal, wheat middlings, yellow corn meal, old process linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, salt, calcium carbonate.

Acid Insoluble Ash in Linseed Meal.

The definition for linseed meal as adopted by the Association of Feed Control Officials requires that linseed meal shall contain not more than 0.5 per cent of acid insoluble ash.

Acid insoluble ash determinations were made on 25 samples of linseed meal collected by the feed control inspector during the season of 1934-1935. The average content of all samples collected was 0.76 per cent. The maximum amount found was 2.05 per cent; the minimum, 0.08 per cent. It is obvious that no particular attempt is being made to limit the insoluble ash content of linseed meals. It may be that the limit of 0.5 per cent as given in the definition is too high for linseed meal derived from certain sources.

TINNED DOG FOODS.

Numerous requests for information about canned foods has led us to sample the brands commonly found on the Massachusetts markets. No attempt is made to compare their relative value except as is indicated by their analyses. Anyone attempting to evaluate material of this character is handicapped at the outset by the lack of uniformity of opinion as to what constitutes a satisfactory tinned dog food. However, enough difference has been found in them to allow for a wide latitude in choice.

In every case the analyses were made of one purchased can. While the point may be raised that a single can may not be truly representative of the brand as a whole, it is believed that where care is taken in making a uniform product, a one-can sample should be as satisfactory as several.

While no attempt was made to determine the condition of the material used, all samples examined were uniformly free from disagreeable taint or odor.

Interpretation of Chemical Analyses.

Protein. High protein indicates high meat content.

Fat. High fat indicates an admixture of considerable animal fat.

Nitrogen free extract. When high, indicates a high vegetable or cereal content; when low, a more liberal meat or meat product content.

Fiber. Found only in the vegetable or cereal products used.

Ash. Derived from meat, bone, or to a lesser degree from the cereal and vegetable products used. High ash content indicates a liberal admixture of bone or the addition of mineral substances in an attempt to create a better mineral balance.

Chemical Guarantees. Of the twenty-five samples of dog food examined, fourteen carried protein, fat, fiber and carbohydrate guarantees. It is doubtful if the analysis of the product is a deciding factor in its purchase. The dog owner will probably tend to base his conclusions as to relative desirability upon price, palatability, and the resulting condition of the animal fed. On none of them was there a statement of maximum water content, which is probably as important as any other one factor in fixing their real value.

Weights. The net weight of the contents of each can was determined by weighing on delicate scales, cleaning and drying the empty can which was then weighed and the result deducted from the original gross weight. On the whole the cans were found to contain full weight, although the water-free weight showed wide variations. The practice of putting up slightly less than one pound in a can, although the weight is correctly stated on the label, is not to be commended.

Ingredients. A statement of the ingredients used in making tinned dog foods may prove of interest. These are given as stated on the label and no attempt was made to identify the material either by chemical or microscopic means.

Calo Dog Food

Fresh meat, barley, carrots, bone meal, cod liver oil, salt and charcoal.

Hemo-Ration

Meat, blood, cereal and cod liver oil.

Ken-L-Ration

Horse meat products, wheat, rolled oats, rice, cod liver oil.

Marro-Meat

Horse meat and bone, horse marrow fat, cereal and charcoal.

Strongheart Meat Ration

Meat, cereals, vegetables, charcoal.

Ideal Dog Food

Meat by-products, meat, rice, wheat, ground bone, carrots, salmon, cod liver oil.

Imperial Dog Food

Beef, salmon, oatmeal, bran, cod liver oil, barley, alfalfa, bone, charcoal, powdered milk, wheat, onions, carrots, salt.

Red Heart—Diet A

Meat food product, with cereals and vegetables, beef added.

Red Heart—Diet B

Meat food product, with cereals and vegetables, fish added.

Red Heart—Diet C

Meat food product, with cereals and vegetables, cheese added.

Old Mother Hubbard Terrier Ration

Beef, carrots, rice.

Old Trusty Bovex Dog Food

Meat by-products, meat, rice and wheat.

Dog-Gon Good Dog Food

Carries no statement of ingredients except that it is "A Meat Food Product."

Vim Dog Food

Meat food products, wheat and vegetables.

Rex Dog Food

Cereals, beef and beef products, charcoal, meat broth.

Evr Redy Dog Food

Beef, meat food products, wheat, rolled oats, rice, cod liver oil.

Rival Dog Food

Meat product with rolled oats, barley and vegetable flour.

Vitamin Dog and Cat Food

Lean meat, glandular tissues, shredded wheat, cod liver oil, sea vegetables, calcium, sodium, phosphorus.

Sandy's Dog Food

A meat food product (cereal or vegetable content not stated on label).

Mankind Dog Food

Meat, cracked barley, shorts.

Doggle Dinner

Beef products, rice, barley, oats, carrots, cod liver oil, charcoal, bone meal.

Pard Dog Food

Meat by-products, meats, wheat, barley, dry skim milk, tomatoes, bone, salt, cod liver oil.

Silver Fur Food

Meat by-products, wheat, dry skim milk, tomatoes, bone meal, salt.

Victory Dog & Cat Food

Meat, cereals, vegetables, cod liver oil.

Vitamont Dog Food

Beef and horse meat product (cereal or vegetable content not stated on label).

A statement of the ingredients used in the making of tinned dog foods is not required by Massachusetts statutes. Where used, the statement should be in such form as to be readily understood by the purchaser. The omission of such a statement renders it more difficult for the buyer to evaluate the product he proposes to use.

MASSACHUSETTS
AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN NO. 80

NOVEMBER, 1935

Seed Inspection

By F. A. McLaughlin

This Report, the eighth in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1935 by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274.)

Massachusetts State College
Amherst, Mass.

ANNOUNCEMENT

The Seed Testing Laboratory will allow ten units of work free of charge, during any calendar year, to any resident firm or citizen of Massachusetts.

Units are rated as follows:

	Units
Purity analysis (red clover, timothy, etc.)	1
Purity analysis (bluegrass, orchard grass, etc.)	2
Purity analysis of a mixture of seeds (depending upon the number of kinds in the mixture)	4-10
Examination for noxious weeds (4 oz. or fraction thereof) of samples not mixtures	1
Examination for noxious weeds (4 oz. or fraction thereof) of mixtures	4-10
Identification of seed or plant	1
Cleaning tobacco seed (4 oz. or fraction thereof)	2
Germination tests (4 x 100 seeds, of any seed not chaffy or requiring a purity test)	1
Germination tests (soil, 2 x 100 seeds)	1
Germination tests (chaffy grasses or seeds requiring purity analysis)	2-4

Fees for work in excess of the ten free units allowed are as follows:

- Germination test except for grasses other than timothy, but including clovers and alfalfa, thirty cents each.
- Germination tests of grasses except timothy, fifty cents each.
- Purity analyses of cereals, fifty cents each.
- Purity analyses of timothy, and all other kinds of crop seeds, except grasses, seventy-five cents each.
- Purity analyses of grasses and of all mixtures of not more than two kinds of agricultural seeds, one dollar each.
- Purity analyses of special mixtures, including lawn grasses and pasture mixtures, a charge sufficient to cover the actual cost of working the sample, the amount of such fee depending entirely upon the character of the sample submitted for test, minimum charge one dollar and twenty-five cents.

In no case will final report be rendered until all fees are paid.

SEED INSPECTION

By F. A. McLaughlin¹

This bulletin gives the results of analysis of official seed samples collected by the State Department of Agriculture, during the year 1935, from the open markets in 63 towns and cities of Massachusetts and analyzed at the Seed Testing Laboratory of the Massachusetts Agricultural Experiment Station at Amherst. Between October 1, 1934, and October 1, 1935, the Seed Laboratory analyzed 1,151 samples, of which 743 were collected by the State Department of Agriculture and 408 submitted by dealers and farmers. In addition, 205 ingredients found in the special mixtures were given viability tests as a check on the quality of seeds used in these mixtures during 1935. The total number of samples worked in the laboratory, therefore, really amounts to 1,356 without taking into account many retests which were necessary as a check-up on questionable viability of many kinds of seeds which were submitted to us for retests.

This bulletin also contains results of field tests for trueness to type of 207 lots of the following vegetables: beans, beets, carrots, cucumbers, lettuce, onions, parsnips, radishes, spinach, squash, sweet corn and turnips.

SUMMARY OF RESULTS

Alfalfa to Timothy

The following table of analysis, covering 209 samples of seed in this group, continues to show, as in former years, that the most common violation of the seed law is the lack of certain required information on the label. This information was lacking, wholly or in part, for 85 samples (40.66%). Other deficiencies shown are 35, or 16.74%, below in germination; 9, or 4.30%, with excessive weed seed; and 21, or 10.05%, below in purity. In all, 126 samples (60.29%) of this group either did not comply with the label requirements or were not up to the guarantee, even when proper tolerance allowances were made.

Mixtures of Not More Than Two Lots of Seeds

No samples declared as such were taken by inspectors. One, however, sold under the special mixture clause contained but two kinds of seed and should have been labeled as such. The table shows this sample otherwise deficient.

Special Mixtures

In this group 45 samples were analyzed, of which 20 (44.44%) complied with the requirements of the law in every respect and the remaining 25 were only partially labeled or were found deficient in other respects.

Although the law does not require the label to show the germination of the various kinds of seed used in this group, a germination test was made for each kind of seed declared or found in excess of 5% in each of the 45 samples of mixtures analyzed. The following table shows the results of these tests:

¹Assisted by Miss Olive M. Hoefle, appointed Technical Assistant March 11, 1935.

Number Tested	Name of Seed	Germination, Percent		
		Lowest	Highest	Average
38	Kentucky Bluegrass.....	10	80	57.18
20	Timothy.....	32	89	70.75
30	White Clover.....	39-14	89-1	76-6
20	Chewing's Fescue.....	10	81	38
6	Rough Stalked Meadow Grass.....	34	57	47
33	Redtop.....	66	95	82.58
9	Canada Bluegrass.....	44	80	69.33
29	Domestic Ryegrass.....	59	98	90.31
1	Meadow Fescue.....		80	
1	Fine Leaved Fescue.....		40	
1	Crested Dog's-tail.....		82	
1	Perennial Ryegrass.....		94	
3	Red Fescue.....	7	70	32

Although many of the samples contained seed of high quality in both purity and germination, the low germination shown for ingredients of many samples indicates clearly the use of low-grade seed. In other instances, low germination appears to be due to age rather than to poor quality. This is most often due to the fact that the mixtures had been held in stock several years by the retailer before a sample was taken by an inspector.

Low germination of Chewing's Fescue may be expected sometimes two or three months from the date when the mixture is made. Because this seed loses viability oftentimes in a relatively short period of time, the purchaser will do well, when using this seed in mixtures, to have his mixture made to order rather than to select a ready-made mixture containing Chewing's Fescue.

As a protection to the public, the mixture section of the law should be amended to require that the label show approximate percentage of each kind of seed used in the mixture; the germination of each kind of seed; and the year and month when the test was made.

Vegetable Seeds

All of the 489 samples of vegetable seed tested under this section of the law lived up to the label requirements which, in Massachusetts, do not require a statement of germination or the year and month in which a germination test was made. Although much of this seed, as shown by germination tests, was of excellent quality, 149 samples (30.47%) gave a germination below the standards required by law in many states (see Control Bulletin 56, 1930, p. 4). The quality of seed is shown to be slightly better than that of the 1934 inspection, in which 38.2% fell below standard. Yet the fact remains that much of the seed sold in Massachusetts is not of the desired high quality. Probably very little improvement can be expected until the present law is amended to require that a statement of the germination and the date when this test was made be placed upon the container in which vegetable seeds are offered for sale. Such a requirement should make the retailer more cautious about offering for sale old seed which he has held for several seasons, and at the same time give the purchaser an opportunity to note the age and performance of the seed from an examination of the label.

Explanation of the Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section

of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Timothy, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F", what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, noxious weeds not declared, or excessive inert material, depending upon the column in which it is found.

Other deficiencies are enumerated as follows:

- (1) Noxious weeds found.
- (2) Old seed (as shown by given date or by correspondence with the wholesaler).
- (3) Ingredient found, but not declared.
- (4) Ingredient declared, but not found.
- (5) Ingredient declared, but percentage found after adding proper tolerance is less than 5%.
- (6) Term not specific.

The letter "R" after the germination percentage in the table of vegetable seeds indicates that the sample has received one or more retests.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance", the sample is considered as made up of two component parts: (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus twenty per cent (20%) of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination</i>	<i>Allowable Variation (%)</i>
90 or over.....	6
80 or over, but less than 90.....	7
70 or over, but less than 80.....	8
60 or over, but less than 70.....	9
Less than 60.....	10

Type and Variety Studies of Vegetables

Conducted in Conjunction with the Department of Vegetable Gardening
Professor Grant B. Snyder

A large majority of home gardeners buy their vegetable seeds from the neighborhood store. The commercial grower may also buy from this source if he runs short or has forgotten to order a certain crop from his regular seedsman. These various stores and shops in the neighborhood community are, therefore, important sources of garden seeds.

It has been found that in a fair percentage of cases, seed purchased from these sources has been variable in germination and in trueness to name. In order to definitely check the performance of packet and bulk seed sold by these merchants, the Department of Vegetable Gardening has cooperated with the Seed Laboratory in making germination tests and in checking the trueness to name of samples purchased on the open market by state inspectors.

Some 207 lots were included in the field trials, comprising beans, beets, carrots, cucumbers, lettuce, onions, parsnips, radishes, spinach, squash, sweet corn and turnips.

Field notes on germination indicated fairly good vitality of most lots. The greatest variation was noted in beans and lettuce where a few lots failed to germinate and others germinated from 30 to 60 per cent. Spinach failed to germinate because of adverse weather conditions at the time of planting.

The various lots were surprisingly true to the name printed on the seed packet. There were only a very few cases where off types were noted, and even where observed, the percentage was very small.

Seeds with most of these stores are a side line. The person selling them has little or no knowledge of what is being sold other than the information printed on the packet and the price. The conditions under which the seed is stored and displayed are too frequently very poor, resulting in poor germination when planted in the garden. Most of the varieties sold are old standard sorts. Newer improved varieties are generally not listed.

CONTROL SERIES

BULLETIN No. 81

DECEMBER, 1935

Inspection of Commercial
Fertilizers

By H. D. Haskins

This is the sixty-second report of the Massachusetts Fertilizer Control made in accordance with Chapter 94, Sections 250 to 261, inclusive, of Massachusetts General Laws 1920, as amended by Chapter 67, Acts of 1933.

Massachusetts State College,
Amherst, Mass.

INSPECTION OF COMMERCIAL FERTILIZERS FOR THE SEASON OF 1935

By H. D. Haskins, Official Chemist¹

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1935 by 91 firms, covering 489 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	284
Ammoniated superphosphates	5
Superphosphates with potash	1
Dry ground fish, tankage and ground bone	53
Fertilizer simples, including organic nitrogen compounds	95
Tobacco stems	1
Pulverized manures	32
Cotton hull ashes and wood ashes	4
Peat products	6
Stone meal	2
Nitrate of potash	6
 Total	 489

¹ Assisted by H. Robert DeRose, Albert F. Spelman, J. W. Kuzmeski, Karol Kucinski, Chemists; James T. Howard, C. L. Whiting, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

Samples of the following brands were not drawn as they were not found on display by our sampling agents.

Brands of Fertilizer Registered but Not Sampled.

MANUFACTURER AND BRAND.	MANUFACTURER AND BRAND.
Acme Guano Co. Acme 4-8-7 Acme 7-6-6 Sheep Manure (1.25-1-2)	Humphreys-Godwin Co. Bull Brand Cottonseed Meal (6.87-0-0)
Apothecaries Hall Co. Castor Pomace (4.52-0-0) Dry Ground Fish (9.46-5-0)	New England Chemical Industries, Inc. Inedible Bone Meal
Armour Fertilizer Works Armours Big Crop Fertilizer 4-12-4 Nitrate of Soda (16-0-0)	Rogers & Hubbard Co. Cotton Hull Ashes (0-0-30) Linseed Meal (5-0-0) Nitrate of Potash (13-0-44)
Eastern States Farmers' Exchange E. S. 20% Superphosphate E. S. 40% Double Superphosphate	Victory Fertilizer Corp. Victory Humus (.5-0-0)

Drawing of Samples.

Between April 1 and June 15, three sampling agents made a thorough canvass of the state: James T. Howard in Hampshire, Hampden, Franklin and Berkshire Counties; G. E. Taylor in Norfolk, Bristol, Plymouth, Barnstable and Dukes Counties; and C. L. Whiting in Essex, Middlesex, Suffolk and Worcester Counties. They visited 209 towns, took 1,967 samples, representing 470 brands, from stock in the possession of 598 agents or owners, and called upon 335 agents where no samples were drawn because the agency had been discontinued, the stock was all sold out, or sufficient samples had already been taken of the brands found. They sampled 21,114 sacks, representing 12,305 tons of fertilizer. One ton was sampled to every five and one-seventh tons sold in the state.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS.

Both ammonium sulfate and sodium nitrate have shown a small but consistent decline in price during the year. Calcium nitrate declined \$1.87 per ton in January 1935 and since that date has shown a further decline of 38 cents per ton. Potassium nitrate has been selling at a steady price, but \$3.15 per ton lower than for 1934. This is consistent with the decline in price of nearly all potash fertilizers. Most of the organic ammoniates have shown an advance in price during the year as compared with the six months' average for 1934; the September 1935 quotations for these products, however, show a consistent decline in price as compared with the six months' average ending March 1, 1935.

Superphosphate showed a small increase in cost for the six months' average as compared with the average price for the corresponding period in 1934; a decline of 25 cents per ton is noted, however, in the quotations for September 1935.

The decline in the price of potash salts noted in the fall of 1934 has held through the season of 1935.

The results of this brief review of the market would not indicate justification for an advance in the price of mixed fertilizers for 1936.

The following table gives average quotations taken from the Oil, Paint and Drug Reporter.

Wholesale Quotations on Chemicals and Unmixed Materials.

NATURE OF MATERIAL.	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1.		Price Per Ton Sept. 23, 1935.	Difference Between Sept. 23 Price and Six Months' Average: Sept. 1, 1934-Mar. 1, 1935.
	1934.	1935.		
Ammonium sulfate (20.5% N), 200 lb. bags, northern ports	\$26.48	\$25.80	\$22.00 ^a	-\$3.80
Nitrate of soda (15.5% N), bags, natural or synthetic, ex vessel	26.44	25.50	24.80	- .70
Nitrate of lime (15% N), bags, northern ports, ex vessel	25.72	25.88	24.25	-1.63
Nitrate of potash (13% N, 44% K ₂ O), bags, c.i.f. ports	53.65	48.15	45.00	-3.15
Urea (46% N), car lots, bags, ex vessel	104.72	110.00	100.00	-10.00
Dried blood (12.34% N), ground, bulk, New York	39.18	44.94	44.00	- .94
Hoof meal (14.15% N), f.o.b. Chicago	32.08	44.53	35.38	-9.15
Animal tankage (8.23% N, 6.86% P ₂ O ₅), ground, bulk, New York	26.35	28.59	29.00	+ .41
Dry ground fish (9.02% N, 6.86% P ₂ O ₅), bags, Baltimore	40.92	39.56	37.00	-2.56
Cottonseed meal (5.75% N), bags, at mill	21.29	33.38	20.00	-13.13
Castor pomace (4.52% N), bags, car lots, f.o.b. works	17.12	18.45	16.50	-1.95
Ground bone (2.47% N, 22.88% P ₂ O ₅), bags, f.o.b. Chicago	21.73	16.96	19.00	+2.04
Superphosphate (16% avail. P ₂ O ₅), bulk, f.o.b. Baltimore	7.92	8.50	8.25	- .25
Muriate of potash (50.54% K ₂ O), bags, c.i.f.	37.15	22.00	23.38	+1.38
High grade sulfate of potash (48.65% K ₂ O), bags, c.i.f.	42.15	35.00	33.75	-1.25
Potash-magnesia sulfate (25.94% K ₂ O), bags	25.00	22.50	22.25	- .25
Cotton hull ashes (25% K ₂ O), bulk, delivered, car lots	33.75	21.25	21.25	none

^a Bulk.

Fertilizer Trade Values.

FORM OF PLANT FOOD.	Value per Pound.	Unit Value.
Nitrogen.		
In ammonia salts	\$0.0735	\$1.47
In nitrates	.0975	1.95
Organic nitrogen in fish	.21	4.20
Organic nitrogen in blood, meat and hoof meal	.215	4.30
Organic nitrogen in fine ¹ bone and tankage	.2325	4.65
Organic nitrogen in coarse ¹ bone and tankage and in pulverized manures	.16	3.20
Organic nitrogen in mixed fertilizers	.19	3.80
Organic nitrogen in cottonseed meal, castor pomace, linseed meal, etc.	.285	5.70
Organic nitrogen in urea and calurea	.1225	2.45
Organic nitrogen in cyanamid	.085	1.70
Phosphoric Acid.		
Soluble in water and neutral citrate of ammonia (available)	.05	1.00
In precipitated bone	.05	1.00
In basic slag phosphate	.06	1.20
In fine ¹ bone and tankage, and in fish	.04	.80
In coarse ¹ bone and tankage	.035	.70
In pulverized manures, seed residues, and ashes	.035	.70
Insoluble in neutral citrate of ammonia in mixed fertilizers	.02	.40
Potash.		
As sulfate	.0425	.85
As muriate	.026	.52
As carbonate	.099	1.98
As nitrate	.0375	.75
In potash-magnesia sulfate	.0525	1.05
In cotton hull and wood ashes (soluble)	.057	1.14
In organic vegetable compounds, sheep manure, and insoluble in ashes	.0375	.75
Magnesium Oxide.		
Water soluble from Kieserite and Emjeo	.067	1.34

¹ Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1/50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

The foregoing fertilizer trade values are based on average wholesale quotations of fertilizer chemicals and unmixed materials, as taken from trade journals for six months ending March 1, 1935, to which 20 per cent has been added for overhead. When appropriate, an additional allowance has also been made for bags, labor and transportation.

FERTILIZER TONNAGE.

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts.

	July 1, 1932, to July 1, 1933.	July 1, 1933, to July 1, 1934.	July 1, 1934, to July 1, 1935.
Mixed fertilizers	37,076	40,160	42,912
Fertilizer chemicals and materials unmixed	16,451	15,870	18,711
Pulverized natural manures	1,443	1,614	1,585
Totals	54,970	57,644	63,208

There were 5,564 tons more fertilizer sold in the state in 1935 than during the previous year. The tonnage of mixed fertilizer was 2,752 more, and that of the fertilizer chemicals and unmixed materials was 2,841 more than for 1934. Pulverized manures showed a decrease of 29 tons. Of the total tonnage sold, 67.9 per cent was mixed fertilizer, 29.6 per cent was unmixed materials, and 2.5 per cent was dried and pulverized natural manures.

Plant Food Tonnage.

	Nitrogen.		Phosphoric Acid.		Potash.	
	1934.	1935.	1934.	1935.	1934.	1935.
Mixed fertilizers	2,028	2,231	3,438	3,775	2,745	3,048
Fertilizer chemicals and materials unmixed	1,144	1,308	1,344	1,670	484	585
Pulverized natural manures	33	33	24	25	44	44
Totals	3,205	3,572	4,806	5,470	3,273	3,677

There were 1,435 more tons of plant food sold in the state than during 1934, of which 367 tons were nitrogen, 664 tons available phosphoric acid, and 404 tons potash.

There were 12,719 tons of plant food sold, of which 28 per cent was nitrogen, 43 per cent available phosphoric acid, and 29 per cent potash. Mixed fertilizers furnished 71 per cent of the plant food, chemicals and unmixed materials 28 per cent, and pulverized manures 1 per cent.

The three plant food elements were furnished in the following proportions by the mixed fertilizers and the unmixed materials, including the pulverized manures: nitrogen, 62 per cent from mixed and 38 per cent from unmixed; phosphoric acid, 69 per cent from mixed and 31 per cent from unmixed; potash, 83 per cent from mixed and 17 per cent from unmixed.

The following tables present tonnage figures for one year, July 1, 1934, to July 1, 1935, for both mixed fertilizers and unmixed fertilizer materials. In case of the mixed fertilizers the grade represents the plant food guarantee of each fertilizer and is expressed in the order of nitrogen, available phosphoric acid, potash.

Tonnage of Mixed Fertilizers.

--------	----	---	---------------	----	---

Of the 42,401 tons of complete fertilizer sold, 75 per cent was furnished by 7 grades and 123 brands. Double and multiple-strength grades totaled 1,987 tons and 26 brands, which was 538 tons more than during the previous year.

Of the mixed fertilizer sold, over 98 per cent contained 14 per cent or over of available plant food.

There were 70 tons less of low-analysis (less than 14 per cent available plant food) complete fertilizers sold than in 1934. The 5-3-5 grade, comprising 8 brands, furnished over 89 per cent of the tonnage of this class of goods.

In the following table are listed ten of the most popular grades of mixed fertilizer together with the tonnage of each sold in Massachusetts for the years 1934 and 1935.

1934.		1935.	
GRADE.	Tonnage.	GRADE.	Tonnage.
5-8-7	13,346	5-8-7	14,111
4-8-4	8,399	4-8-4	7,491
4-8-7	3,013	4-8-7	3,921
4-8-10	2,310	4-8-10	2,131
7-6-6	1,415	7-6-6	1,980
4-8-8	1,085	3-10-4	1,107
3-10-4	1,080	4-8-8	1,048
5-8-10	762	4-12-4	939
4-12-4	651	5-8-10	879
8-16-16	591	6-3-6	851

The following table shows how the tonnage sold in 1934 corresponds with the New England Standard Nine grades selected by the New England Agronomists in 1931.

NEW ENGLAND STANDARD NINE GRADES.	Tonnage.	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods.	Total.
5-8-7	14,111	5,042 ^a	19,153
4-8-4	7,491 ^b	345	7,836
4-8-10	2,203 ^c	-	2,203
7-6-6	1,980	203	2,183
6-3-6	851 ^d	1,058	1,909
3-10-4	1,107	671	1,778
2-12-4	54	-	54
5-8-10	891 ^e	-	891
2-8-10	94 ^f	-	94
Totals	28,782	7,319	36,101

^a Including 673 tons of 8-16-14.

^b Including 242 tons of 5-10-5 and 6 tons of 15-30-15.

^c Including 72 tons of 8-16-20.

^d Including 7 tons of 10-5-10 and 2 tons of 8-4-8.

^e Including 12 tons of 10-16-20.

^f Including 32 tons of 4-16-20.

Of the total tonnage of mixed fertilizer sold in Massachusetts, 67 per cent was from grades recommended by New England Agronomists to meet New England conditions, and 17 per cent additional tonnage was from grades varying but one per cent in one or more plant food elements from the grades thus recommended. Of the ten grades, including the multiple strength mixtures, that have the highest tonnage (36,278 tons), all but four were among the New England Standard Nine. These six grades showed a total tonnage of 28,891.

Over 18 per cent of the total tonnage of mixed fertilizer was from five grades not included in the New England Standard Nine. They are 4-8-7, 8-16-14, third largest tonnage sold; 4-8-8, 8-16-16, seventh largest; 4-12-4, 8-24-8, eighth largest; 4-10-4, eleventh largest; and 5-3-5, twelfth largest.

The tonnage of unmixed materials, as shown in the following table, was distributed as follows: nitrogen products, 42 per cent; phosphoric acid products, 31 per cent; potash products, 5 per cent; tankage, fish, bone, nitrate of potash, Ammo-Phos, and wood ashes, 18 per cent; and miscellaneous, 4 per cent. Pulverized animal manures are not included.

a Several analyses of the same brand have been averaged and recorded in the table as one analysis. Analyses of fertilizer left over from previous year not included.

Summary of Deficiencies in Mixed Fertilizers.

	1933.	1934.	1935.
Brands deficient in one element	86	67	42
Brands deficient in two elements	6	7	7
Brands deficient in three elements	1	0	2
Brands deficient in nitrogen	16	22	20
Brands deficient in available phosphoric acid	41	22	22
Brands deficient in potash	44	37	17
Brands deficient in magnesium oxide	-	0	3

Serious Commercial Shortages in Mixed Fertilizers.

AMOUNT OF SHORTAGE PER TON.	NUMBER OF BRANDS ACCORDING TO YEARS.			
	1932.	1933.	1934.	1935.
More than \$5	none	1	1	1
Between \$4 and \$5	none	none	none	none
Between \$3 and \$4	2	none	none	1
Between \$2 and \$3	none	2	none	none
Between \$1 and \$2	2	1	1	2

Of the 288 brands analyzed, 237, or 82 per cent, showed no deficiencies. Out of 887 plant food guarantees made, 93 per cent were fully maintained.

The deficiency table shows the following statistics:

Deficiencies not exceeding $\frac{1}{4}$ of one per cent, 26.

Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of one per cent, 10.

Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of one per cent, 12.

Deficiencies more than $\frac{3}{4}$ of one per cent, 14.

Of the total number of guarantees of each element made, 7 per cent of the nitrogen, 8 per cent of the available phosphoric acid, and 6 per cent of the potash were not met. Ten of the 20 nitrogen deficiencies, 5 of the 22 available phosphoric acid deficiencies, and 9 of the 17 potash deficiencies did not exceed one fourth of one per cent.

Compared with the 1934 inspection, there were 2 less shortages in nitrogen, the same number in available phosphoric acid, and 20 less in potash.

In the case of those fertilizers which did not conform strictly to the guarantee, the discrepancies were of such a character as to make it evident that there was no intentional attempt at violation of the regulations.

Fourteen different firms have registered five or more brands of mixed fertilizers. On the basis of composition found by analysis as well as upon tonnage sold, the above table shows to what extent each manufacturer was successful in avoiding deficiencies in plant food guarantees in his mixtures. All of the fourteen firms provided a satisfactory average over-run in the three major plant food elements guaranteed.

Fertilizer Costs Compared.

The approximate money value of several fertilizers may be compared by dividing the average selling price of each grade by the average commercial valuation as found or as guaranteed, assuming in the latter case that the plant food guarantees are maintained. This will give the actual cost of one dollar of valuation. (The valuations are obtained by multiplying the percentage or units of the several forms of nitrogen, available phosphoric acid, and potash as given in the tables of analysis by the unit value as published in the table of trade values; the sum of all these items will be the commercial valuation of the fertilizer.)

Acid and Basic Fertilizers.

The following table shows the extent to which the mixed fertilizers sold in the state during the year contributed to soil acidity.

These results were secured by the use of the Pierre method modified to correct for the equivalent basicity of the citrate insoluble phosphoric acid found in each fertilizer (see page 101, Vol. XVII, No. 1, Journal of the Association of Official Agricultural Chemists).

Both basic and acidic results have been computed on the basis of the total tonnage of the various brands sold in the state and are given in terms of tons of carbonate of lime. The net acidity is obtained by deducting the total basicity of the brands that were alkaline from the total acidity of the brands that were acid, the results being expressed in terms of calcium carbonate. Data for each manufacturer's brands are on file and will be furnished to the appropriate manufacturer upon application.

Summary of Data on Acid and Basic Fertilizers.

FERTILIZER TONNAGE TESTED			EXTENT OF ACIDITY OR BASICITY ON FERTILIZER TONNAGE SOLD, RESULTS EXPRESSED IN TONS OF CALCIUM CARBONATE (CaCO ₃).		
	1934.	1935.		1934.	1935.
Acid	35,205	35,715	Acidity	4,812	3,840
Basic	4,523	6,967	Basicity	149	445
Total	39,728	42,682	Net acidity	4,663	3,395

With an increase over 1934 of 2,954 tons of mixed fertilizer inspected, the net acidity, expressed in tons of carbonate of lime, is 1,268 tons less than for 1934. This shows a more liberal use of fine ground limestone as a conditioner in mixed fertilizers.

Explanation of Tables of Analyses.

Guarantee. The plant food guarantee or the grade of each fertilizer is made a part of the trade name under the heading "Name of Manufacturer, Brand and Grade," and is expressed as nitrogen, available phosphoric acid and water soluble potash and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1935, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

^a This fertilizer was manufactured by the Walker Fertilizer Co., Inc., Orlando, Florida. It is the custom in Florida to designate fertilizer grade in terms of ammonia, available phosphoric acid and water soluble potash. Through an oversight this lot was made up to test 10 per cent ammonia, instead of 10 per cent nitrogen. The same explanation holds true with reference to Frost's Lawn and Shrubby Special 8-0-2 listed under "Mixtures substantially complying with guarantee."

^b Water soluble magnesium oxide guaranteed, 2%; found in 1 sample, 1.39%; found in 1 sample, 1.41%. One other sample showed a commercial shortage of 82 cents: a composite of 4 other samples substantially complied with the guarantee.

Basic slag phosphate . . .	6	2	-	18.39	16.28	-	23.80	17.12	5.38 (available phosphoric acid)
Precipitated bone . . .	3	3	-	40.23	39.42	-	47.37	39.74	7.3 (available phosphoric acid)
Muriate of potash . . .	60	24	-	-	-	59.67	34.61	31.03	6.01 (available phosphoric acid)
High grade sulfate of potash . . .	18	12	-	-	-	49.19 ^d	54.51	41.81	2.9 (potash)
Potash-magnesia sulfate . . .	3	3	-	-	-	27.02 ^e	30.89	22.97	5.54 (potash)
Dry ground fish . . .	27	16	9.78	6.98 ^f	-	-	50.63	46.66	5.7 (potash)
Animal tankage . . .	41	15	9.69	8.19 ^g	-	-	53.50	44.11	23.03 (nitrogen)
Ground bone . . .	123	38	2.88	25.00 ^h	-	-	40.49	31.39	24.45 (nitrogen)
Ground tobacco stems . . .	1	1	2.38	.38 ⁱ	-	3.86 ^c	-	10.79	3.75 (phosphoric acid)
Cotton hull ashes . . .	4	4	-	2.30 ^j	-	29.87	39.79	38.03	-
Wood ashes . . .	5	5	-	1.96 ^k	-	5.56	-	12.81	6.0 (potash)
Pulverized sheep manure (l) . . .	64	25	1.81	1.48	-	3.11 ^c	48.40	9.16	-
Pulverized sheep and goat manure (l) . . .	31	9	1.58	1.20	-	3.28 ^c	36.45	8.36	-
Pulverized cattle manure (l) . . .	25	10	2.11	1.49	-	2.18 ^c	46.56	9.43	-
Pulverized poultry manure (l) . . .	7	3	5.08	2.41	-	1.27 ^c	48.22	18.90	-
Pulverized poultry manure and peat (l) . . .	5	2	3.15	3.29	-	1.57 ^c	-	13.56	-
Sheep manure and wool waste (l) . . .	6	6	1.37	.48	-	4.03 ^c	15.00	7.74	-

^a Also contains about 50% of calcium oxide in form to neutralize soil acidity.

^b Cottonseed meal had average calcium oxide .99%, magnesium oxide 1.23%; castor pomace had calcium oxide 1.52%, magnesium oxide 1.01%; linseed meal had calcium oxide 1.19%, magnesium oxide 1.17%.

^c Total potash.

^d Chlorine 2.11%.

^e Magnesium oxide 9.55%, chlorine 2.15%.

^f Chlorine .12%.

^g Average tankage finer than 1/50 inch, 49.55%; coarser than 1/50 inch, 50.45%.

^h Average bone finer than 1/50 inch, 70.04%; coarser than 1/50 inch, 29.96%.

ⁱ Organic matter 67.40%.

^j Calcium oxide 12.12%, magnesium oxide 5.50%, moisture 5.37%, insoluble matter 12.47%.

^k Average calcium oxide 33.92%, magnesium oxide 3.99%, water 6.95%, insoluble matter 11.45%.

^l Average organic matter: sheep manure, 48.40%; sheep and goat manure, 37.16%; cattle manure, 66.43%; poultry manure, 64.27%; poultry manure and peat, 63%; sheep manure and wool waste, 32.39%.

Nitrogen Compounds.

The chemicals and unmixed materials under this headings are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element; the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton are listed by themselves, serious deficiencies being emphasized by boldface type.

Stone Meal.

PLANT FOOD ELEMENTS.	MANUFACTURED BY MENDERTH, INC.			MANUFACTURED BY DONALD S. MCCRILLIS.		
	Guaranteed.	Average Found. (a)		Guaranteed.	Found.	
		Soluble in Strong Hydrochloric Acid.	By Fusion Method.		Soluble in Strong Hydrochloric Acid.	By Fusion Method.
Potassium oxide	3.00	1.37	4.38	3.00	.14	.97
Phosphoric acid13	.24	.32	.25	.29	.38
Calcium oxide	3.00	1.94	3.67	.56	2.27	5.35
Magnesium oxide	2.00	2.68	3.95	2.00	3.04	4.64

a Results reported are the average analyses of two samples; one drawn in Beverly and one in Norwood, Mass.

Note: The commercial value of the plant food contained in one ton of these stone meal products, based upon their content of strong acid soluble potash, phosphoric acid, calcium and magnesium, would be about \$1.82 for Menderth and \$1.03 for the McCrillis Stone Meal. We believe that these valuations are much in excess of the actual value of the products as sources of plant food for the reason that they are so insoluble.

Definitions and Interpretations Relating to Fertilizers.

The following definitions and interpretations have been adopted as official by vote of the Association of Official Agricultural Chemists at a meeting held in 1935.

The committee recommends that the water-soluble or available **manganese** in fertilizers be expressed as manganese (Mn).

The term **manganese sulfate**, when applied to an ingredient of a mixed fertilizer, shall designate anhydrous manganous sulfate ($MnSO_4$).

Cyanamid is a commercial product composed chiefly of calcium cyanamid ($CaCN_2$), and it shall contain not less than twenty-one per cent (21%) of nitrogen.

The term "**lime**" shall not be used in the registration, labeling, or guaranteeing of fertilizers or fertilizing materials, unless the lime is in a form or forms to neutralize soil acidity.

CONTROL SERIES

BULLETIN No. 82

DECEMBER, 1935

Inspection of Agricultural
Lime Products

By H. D. Haskins

This is the twenty-fourth report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold in the State during the year. In case of the ground limestone products the mechanical analysis is also given.

Massachusetts State College
Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1935

By H. D. Haskins, Official Chemist¹

Manufacturers and Brands

During 1935, twenty-four firms registered for sale in Massachusetts fifty-three brands of lime products advertised and sold for neutralizing acid soils, and one brand of land plaster or gypsum. The products are grouped as follows:

Hydrated or slaked lime	31
Ground limestone	21
Oyster shell lime	1
<hr/>	
Total	53
Gypsum	1

All of the lime products registered in Massachusetts during the year were sampled and analyzed and the results appear in this bulletin. Most of the samples were secured by the same agents who drew the samples for the fertilizer inspection, and were taken from all parts of the State during a ten-week period following April 1. A few samples were drawn, upon request, during the fall when much of the land in the Connecticut Valley is plowed and limed in preparation for the onion crop to be grown the following spring. The samples numbered 117, represented 54 brands, and were drawn from stock in the possession of 92 agents or owners.

Two products not registered in the State during 1935 have also been included: Jag's Hydrated Pure Lime, manufactured by Atlas Products & Manufacturing Co., Philadelphia, Penn., was found on sale at only one hardware store. It was sold only in small packages and was advertised for general use. The analysis is included since some of it may have been used on local gardens. Herzog's White Lime, manufactured by the Herzog Lime & Stone Co., Forest, Ohio, was sampled at two stores. In both cases the product was sold only in small packages and had been carried over from 1934 when the product was registered. No new lots were sold in Massachusetts during 1935.

Variations and Deficiencies in the Composition of Lime Products

Lime products used as soil amendments may be divided into two groups, the high calcium and the high magnesium limes, both of which are found among the fine ground limestones as well as among the hydrated products. The high magnesium limes usually have a higher neutralizing value besides furnishing the plant food element magnesium in available form. Some Massachusetts soils are showing evidences of magnesium deficiency, and on such soils the high magnesium products may prove the best selection. Their cost is usually about the same as that of the high calcium products.

Sixty-nine per cent of the lime products analyzed showed no deficiencies, and in many cases where small deficiencies did occur in one of the elements, an overrun of the companion element gave a sufficient increase in neutralizing value so that the small deficiency was of little significance.

¹Assisted by H. Robert DeRose, First Assistant Chemist; James T. Howard, C. L. Whiting, and G. E. Taylor, Sampling Agents.

**Deficiencies in Calcium Oxide Neutralizing Value Shown in
Table I.**

	<i>Per Cent</i>
Brewer & Co., Inc. Snow Fluff Agricultural Hydrate	3.24
Brewer & Co., Inc. Sure Crop Agricultural Hydrate	.57
Herzog Lime and Stone Co. Herzog's White Lime	4.18
H. E. Millard Sweet Arrow Hydrated Lime	2.44
New England Lime Co. Nelco Agricultural Hydrate (Canaan)	1.95

The Magnesium Agricultural Hydrate manufactured by B. K. Harris was deficient 4.94% in magnesium oxide, but ran 8.15% over the minimum guarantee in calcium oxide, so that the calcium oxide equivalent was well maintained.

Attention is called to the coarse grinding of several of the ground limestone products listed in Table II. Although it may not be practical to grind limestone so that it will all pass through a 100-mesh sieve, yet it is practical, as is demonstrated by many manufacturers listed in this bulletin, to grind sufficiently fine so that 80% will pass a 100-mesh sieve. The following products are comparatively speaking very much coarser and are therefore less immediately effective in neutralizing soil acidity:

- Fine Ground Magnesian Lime Stone, American Agricultural Chemical Co.
- High Grade Ground Limestone, Hazen Bros.
- Hoosac Agricultural Limestone, Hoosac Valley Lime Co., Inc.
- Sealshipt Oyster Shell Dust, Producers Sales Co.
- Ashley White Dolomite Agricultural Limestone, D. U. Smith & Brother.

Only one ground limestone showed a serious deficiency. Three samples of Dragon Mainrok Finely Ground Magnesian Limestone, manufactured by the Lawrence Portland Cement Co., showed deficiencies in both calcium and magnesium oxides amounting to 3.09%, 2.98%, and 6.48%, respectively, in terms of calcium oxide equivalent.

Explanation of Tables of Analyses

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO₂). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked), burned lime (caustic or unslaked), or as basic silicate. All of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

Table II, "Carbonates of calcium and magnesium." The calculation in this column allows for the small amounts of calcium and magnesium combined as basic silicates; these are readily soluble in mineral acid solutions but obviously should not be classed as carbonates.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

Tables I and II. "Neutralizing value expressed in terms of calcium oxide" represents the acid neutralizing value of both the magnesium and the calcium. The figures in the "per cent" column are obtained by a direct titration with standard acid. The "pounds in one ton" are secured by multiplying the figures in the "per cent" column by 20.

"Insoluble matter" represents material which is insoluble in dilute hydrochloric acid to which a few drops of nitric acid has been added.

The figures in parenthesis following the brand name show the number of samples collected and analyzed.

Tonnage of Lime Products Sold as Soil Amendments in Massachusetts during 1934

	<i>Tons</i>
Ground limestone and shell lime	19,582
Other forms (largely hydrated and air slaked)	6,319
Total	25,901

In securing the above statistics three producers failed to furnish us tonnage data; and a conservative estimate was made in these cases. The above figures seem low, for in 1930, 56,336 tons was sold.

Lime Definitions

The following definitions of lime products used in agriculture were made official by vote of the Association of Official Agricultural Chemists at their annual meeting in November 1935. The definitions for quick lime and hydrated lime, previously published in our lime bulletin No. 61, December 1931, were revised by vote of the Association upon recommendation of the Committee on Definition of Terms and Interpretation of Results on Fertilizers and Liming Materials.

1. The word **lime** when applied to liming materials means either calcium oxide or calcium and magnesium oxides.

2. **High-calcium products** are materials in which 90 per cent or more of the total calcium and magnesium oxide content consists of calcium oxide.

3. **High-magnesium products** are materials in which more than 10 per cent of the total calcium and magnesium oxide content consists of magnesium oxide.

4. The designations **quick lime, burned lime, caustic lime, lump lime, unslaked lime**, shall apply to calcined materials, the major part of which is calcium oxide, in natural association with a lesser amount of magnesium oxide, and which is capable of slaking with water.

5. **Hydrated or slaked lime** is a dry product consisting chiefly of hydroxide of calcium and oxide-hydroxide of magnesium.

6. **Agricultural liming materials** are those lime products whose calcium and magnesium content is capable of neutralizing soil acidity.

Sixteenth Annual Report on
Eradication of Pullorum Disease
in Massachusetts

By the Poultry Disease Control Laboratory

This bulletin reports the results of pullorum-disease testing for the 1935-36 season. Further progress has been made in the eradication of pullorum disease during the season. There have been increases in the number of flocks and birds tested and in the number of tests made, with a reduction in the average percentage of positive tests to the lowest point attained during the sixteen-year testing period. Comments and suggestions concerning the eradication program are presented.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

SIXTEENTH ANNUAL REPORT ON PULLORUM DISEASE ERADICATION IN MASSACHUSETTS

1935-1936

By the Poultry Disease Control Laboratory¹

Introduction

For the past sixteen years pullorum-disease testing has been carried on in Massachusetts for the purpose of eliminating the disease from breeding flocks. To this end marked progress has been made, since few infected flocks are now detected among the total number tested.

Poultrymen have come to realize the benefits from a pullorum-clean flock and to appreciate the importance of annual testing of all birds on the premises. More poultrymen are becoming eradication-minded, thus stimulating progress in the establishment of additional pullorum-clean flocks. The buying public, whose interest may be in hatching eggs, day-old chicks, or older stock, have also come to realize that purchases should be confined to officially recognized pullorum-clean sources. Through the adoption and execution of a sound eradication program and a cautious policy of buying new stock only from sources officially recognized as pullorum clean, Massachusetts poultrymen can be assured of ultimate success in stamping out the disease.

During the past testing season further progress has been made. The credit for this success is due in large measure to the various agencies which have directly or indirectly aided in fostering the eradication program.

Summary of Service Rendered

Applications received.....	269
Applications cancelled	14
Flocks tested	255*
Number of tests.....	344,233
Chickens:—	
Routine	334,987
Experimental.....	9,094
Fowl other than chickens:—	
Routine.....	139
Experimental.....	13
Owners receiving necropsy service	39
Necropsies of reacting birds.....	72

*Includes three flocks of poultry other than chickens.

Distribution of Tests and Reactors

Table 1 gives the number of tests and reactors by counties and breeds. A total of 344,081 samples was received from the 11 counties. The average percentage of positive tests was 0.30, which is the lowest attained during 16

¹Poultry Disease Control Laboratory Staff: H. Van Roekel, Chief of Laboratory; K. L. Bullis, Assistant Veterinary Pathologist; O. S. Flint, Assistant Research Professor; Miriam K. Clarke and Felicia Zimnoski, Laboratory Assistants. Appreciation is extended to Dr. J. B. Lentz for assistance given to the testing work.

TABLE 1. DISTRIBUTION OF TESTS AND REACTORS, BY COUNTIES AND BY BREEDS

Breed	Barnstable	Berkshire	Bristol	Essex	Franklin	Hampden	Hampshire	Middlesex	Norfolk	Plymouth	Worcester	Totals	Percent Positive Tests
(Total tests)	2,336	4,399	32,439	17,923	28,675	12,834	13,616	44,587	66,146	15,595	48,657	287,207

(Number)	0	11	186	98	260	32	2	0	135	8	288	1,020	
Positive Tests.....(Percent)	0.00	0.13	0.47	0.45	0.79	0.21	0.01	0.00	0.18	0.03	0.56		0.30

years of testing. Two counties, Barnstable and Middlesex, had no reactors among the birds tested. The latter county had 57,753 birds tested. Less than 0.80 percent of the birds tested in any county were found to be positive. Eight counties showed an increase in testing over the 1934-35 season, while three (Bristol, Hampshire, and Plymouth) showed a decrease.

One breed (White Plymouth Rocks), represented by 12,050 birds, revealed no reactors. This same breed showed no reactors in 1934-35.

Of the total number of samples tested, 313,333 were from females and 30,748 from males. Of these, 0.31 and 0.17 percent, respectively, were positive.

Annual Testing Effective in Eradication

Table 2 shows that 252 flocks, representing 329,659 birds, were tested. In the 43 flocks tested for the first time and representing 21,119 birds and 21,892 tests, the percentage of positive tests was 2.55, which is a slight increase over the corresponding percentage (2.17) for the 1934-35 season. In this group 31 flocks were classified as non-reacting, but of these 10 were only partially tested. The results for this group of flocks appear quite similar to those of the previous season, indicating possibly that, as additional new flocks are tested, heavy infection may not be anticipated. This can be attributed largely to the fact that more and more poultrymen are seeking pullorum-disease-clean stock.

In the flocks tested intermittently and those tested for two consecutive years, increases are observed in the number of tested flocks, birds, and tests. It is encouraging to note that in both groups the percentage of positive tests is less than for the previous season, while the number of non-reacting flocks is greater.

The most interesting group is the one made up of flocks tested for three or more consecutive years and consists of 151 flocks, representing 263,400 birds and 271,410 tests. Only 0.10 percent of the tests were positive, which is the lowest percentage attained during the 16-year testing period. The number of birds in flocks tested for three or more consecutive years represents 79.9 percent of the total birds tested. Furthermore, 148 flocks were classified as non-reacting while only 3 were positive. It is very apparent that annual testing of all the birds on the premises has been effective in establishing and maintaining pullorum-disease-clean flocks.

TABLE 2. ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Percent	100% Tested	Partially Tested	100% Tested	Partially Tested
Tested for the first time	43	21,119	21,892	558	2.55	21	10	10	2
Intermittent testing	29	20,385	21,138	48	0.23	20	6	2	1
Two consecutive years	29	24,755	29,641	144	0.49	20	5	2	2
Three or more consecutive years	151	263,400	271,410	270	0.10	123	25	2	1
Totals	252	329,659	344,081	1,020	0.30	184	46	16	6

It is encouraging indeed to note that only 22 of the 252 flocks tested were classified as positive. The percentage of flock owners who tested all the birds on the premises has increased from 74.5 in 1934-35 to 79.3 in 1935-36.

Appearance of Infection in Flocks Previously Negative

Seven flocks that were non-reacting in 1934-35 revealed infection during the 1935-36 season. Table 3 shows that in three flocks the infection was attributed to faulty management in preventing the introduction of infection; in three flocks the origin was unknown; and for one flock no information was obtained. While the percentage (4.36) of "breaks" among the previously 100 percent tested, non-reacting flocks may be small, yet the explanation for the source of infection suggests that re-infection of some flocks could readily have been avoided. Poultrymen should not overlook or minimize the possible pullorum-disease hazards which may cause serious mortality in their flocks, as well as other losses. The axiom, "an ounce of prevention is worth a pound of cure," cannot be abused by overindulgence. At the present time in the State of Massachusetts one should not experience any difficulty in obtaining reliable and authentic information concerning pullorum-disease-tested flocks. It is a safe policy to investigate thoroughly before dealing with flocks that may be infected.

TABLE 3. APPEARANCE OF INFECTION IN FLOCKS PREVIOUSLY NEGATIVE

Flock	Number of Years Negative	1935-36 Season			Explanation for Infection
		Flock Total	Number Tested	Positive Tests Percent	
1	2	{ 1,779 1,770	1,779 *437	{ 0.06 0.00	Unknown

*Represents retests.

Non-Reacting and Positive Flocks Classified by Counties

In Table 4 non-reacting and positive flocks are classified by counties. In the 11 counties, 230 flocks, representing 315,215 birds, were found to be non-reacting. Middlesex had the largest number (48) of non-reacting flocks, while

TABLE 4. NON-REACTING AND POSITIVE FLOCKS CLASSIFIED BY COUNTIES

Norfolk.....	2	1,366	1	1,221	3	2,587
Worcester.....	4	2,169	1	176	5	2,345
Totals.....	16	10,435	6	4,009	22	14,444

Norfolk County led in the number (69,929) of birds in non-reacting flocks. Of the total birds tested, 95.6 percent were in non-reacting flocks, a definite increase over the percentage (89.5) for the 1934-35 season. Furthermore, among the 315,215 birds in the negative flocks, 90.9 percent were in the 100 percent tested flocks.

The number (22) of positive flocks shows a reduction from the previous season. Of the total birds tested, 14,444 or 4.4 percent were in the positive flocks.

These results show that continued progress is being made toward establishing and maintaining pullorum-clean flocks. An annual decrease in the number of positive flocks, which represents a small portion of the total tested birds, clearly demonstrates that pullorum infection can be eliminated if proper measures are followed. While the number of tested flocks represents only a small percentage of the total flocks in Massachusetts, yet the birds in the pullorum-disease-clean flocks serve as a nucleus from which many additional clean flocks can be established. This fact is quite evident as manifested in the group of flocks tested for the first time. The Massachusetts poultry industry is in a fortunate position to be able to replace the majority, if not all, of the infected flocks in the State. A concerted and organized effort should be made toward educating and stimulating the poultrymen to replace infected

flocks by buying from local flocks which are officially recognized as pullorum-disease clean. Since Massachusetts is bounded by states which have made similar progress in pullorum-disease eradication, the proposal is made that the New England poultry industry might well consider and adopt steps that would hasten the elimination of the residual pullorum infection which exists in the New England area and also adopt measures which would minimize or prevent the introduction of infection from other areas.

Comparison of 1934-35 and 1935-36 Seasons

The results of the 1934-35 and 1935-36 testing seasons are compared in Table 5. Increases are noted in tested flocks (8), tested birds (48,535), tests (42,194), and non-reacting flocks (17). The percentage of positive tests was reduced from 0.39 to 0.30. All counties had less than 0.8 percent positive tests among the samples tested. For two consecutive testing seasons all counties have had less than 1 percent reactors among the tested birds. This suggests that the amount of infection detected each year is too slight to allow any great reduction in the percentage of infection.

TABLE 5. COMPARISON OF 1934-35 AND 1935-36 TESTING

County	Flocks	Birds	Tests	Positive Tests Percent	Non-Reacting Flocks
1934-35 Season

Comments and Suggestions

As stated elsewhere in this report, the marked progress that has been and is being made in pullorum-disease eradication should be credited in a large measure to the splendid cooperation of the poultrymen. The laboratory is doing its part to reciprocate by rendering the highest quality of service which the present organization and facilities will permit.

Poultrymen are requested to comment on the quality of service rendered by the blood collectors. Since it is impossible to follow the field work with the same degree of supervision as the laboratory work, we are forced of necessity to ask the poultrymen to report on the type of field service received. Naturally, we expect a difference in personalities among the personnel on our staff of blood collectors. This is likewise true among the poultrymen. Certain personalities may clash, and consequently unfavorable reports may be received from either the poultryman or the blood collector. The laboratory asks that tolerance be exercised, but not at the expense of accuracy or quality of the work. Suggestions and criticisms will be given due consideration.

Since the great majority of flocks tested each year are non-reacting, occasional flocks will reveal doubtful reacting birds which are difficult to classify as being either negative or positive for pullorum infection. In such instances the agglutination test alone does not give sufficient evidence to enable the laboratory to make a definite diagnosis. Experience has shown that these doubtful-reacting birds can be more accurately diagnosed if they are sent to the laboratory for necropsy. After the bird has been killed and examined with no findings of pullorum infection, the laboratory regards such birds as negative, and the flock owner will receive a negative testing report. However, if the owner fails to submit doubtful-reacting birds which have been requested by the laboratory, he cannot expect his flock to be regarded as negative, because occasionally pullorum infection is recovered from doubtful reactors or birds giving a weak reaction. Furthermore, it has been suggested that the doubtful reaction might be due to faulty operation of the testing process. This suggestion can be ruled out if, after the doubtful reactors arrive at the laboratory, they continue to give the same type of reaction observed earlier. The doubtful reactor has been a great annoyance to the laboratory worker as well as to the poultryman. Inasmuch as the cause or causes of the doubtful reactor are not known, and since such reactors may be indistinguishable from pullorum-disease reactors, poultrymen are requested, for their own safety, to treat doubtful-reacting birds as advised by the laboratory.

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1936 by 89 firms, covering 490 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	290
Ammoniated superphosphates	1
Superphosphates with potash	1
Dry ground fish, tankage and ground bone	48
Fertilizer simples, including organic nitrogen compounds	104
Tobacco stems	1
Pulverized manures	29
Cotton hull ashes and wood ashes	6
Peat products	2
Stone meal	1
Nitrate of potash	7
Total	490

¹Assisted by H. Robert DeRose, John W. Kuzmeski, Albert F. Spelman, Walter Wainio, Chemists; James T. Howard, C. L. Whiting, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

Samples of the following brands were not drawn as they were not found on display by our sampling agents.

Brands of Fertilizer Registered but Not Sampled.

MANUFACTURER AND BRAND.	MANUFACTURER AND BRAND.
American Agricultural Chemical Co. Co-op 8-16-14 Fertilizer	Eastern States Farmers' Exchange Eastern States Castor Pomace (4.5-0-0)
Apothecaries Hall Co. Liberty Tobacco Mixture 6-3-5 Cotton Hull Ashes (0-0-25) Linseed Meal — "Archer-Daniels-Midland Co." (5.44-0-0) Nitrate of Potash (13-0-44)	Olds & Whipple, Inc. Wilcox Potato & General Purpose Fertilizer 4-8-7 O & W Nitrate of Potash (13-0-44)
Cairo Meal and Cake Co. "Miss Cairo" Brand 41% Protein Cottonseed Meal (6.58-0-0)	Rogers & Hubbard Co. Cotton Hull Ash (0-0-30) Linseed Meal 37% Protein (5.75-0-0)

Drawing of Samples.

Between April 1 and June 15, three sampling agents made a thorough canvass of the state: James T. Howard in Hampshire, Hampden, Franklin and Berkshire Counties; G. E. Taylor in Norfolk, Bristol, Plymouth, Barnstable and Dukes Counties; and C. L. Whiting in Essex, Middlesex, Suffolk and Worcester Counties. They visited 189 towns, took 1,667 samples, representing 479 brands, from stock in the possession of 516 agents or owners, and called upon 282 agents where no samples were drawn because the agency had been discontinued, the stock was all sold out, or sufficient samples had already been taken of the brands found. They sampled 19,097 sacks, representing 13,935 tons of fertilizer. One ton was sampled to every four and five-eighths tons sold in the state.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS.

Ammonium sulfate, nitrate of soda and calcium nitrate have either shown but little change or have shown a slight decline in price for the six-month period ending March 1. During the early fall the price of each has somewhat strengthened. Nitrate of potash for the six months ending March 1, 1936, showed a decline in price of \$2.25 per ton as compared with the same period in 1935.

Organic animal ammoniates and dry ground fish have shown an appreciable advance in price during the season. On the other hand, synthetic urea, cottonseed meal and castor pomace have shown a decline, but for the organic vegetable products the price has increased as the season has advanced.

Superphosphate has shown a consistent decline in price during the season and was quoted 50 cents per ton lower on September 28, 1936, than for the six months ending March 1, 1935.

Potash salts did not vary materially in price during the six months ending March 1, 1936, as compared with the same period for 1935. The September 28, 1936, quotations, however, show a consistent advance in price for all potash salts used in fertilizers.

This brief summary might indicate a slight advance in price of mixed commercial fertilizers for the season of 1937.

Wholesale Quotations on Chemicals and Unmixed Materials.

NATURE OF MATERIAL.	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1.		Price Per Ton Sept. 28, 1936.	Difference Between Sept. 28 Price and Six Months' Average: Sept. 1, 1935-Mar. 1, 1936.
	1935.	1936.		
Ammonium sulfate (20.5% N), 200 lb. bags, northern ports	\$25.80	\$25.50	\$27.00	+\$1.50

Fertilizer Trade Values.

FORM OF PLANT FOOD.	Value per Pound.	Unit Value.
Nitrogen.		
In ammonia salts	\$0.075	\$1.50
In nitrates	.0975	1.95
Organic nitrogen in fish	.20	4.00
Organic nitrogen in blood, meat and hoof meal	.215	4.30
Organic nitrogen in fine ¹ bone and tankage	.2325	4.65
Organic nitrogen in coarse ¹ bone and tankage and in pulverized manures	.16	3.20
Organic nitrogen in mixed fertilizers	.19	3.80
Organic nitrogen in cottonseed meal, castor pomace, linseed meal, etc.	.225	4.50
Organic nitrogen in urea and calurea	.115	2.30
Organic nitrogen in cyanamid	.085	1.70
Phosphoric Acid.		
Soluble in water and neutral citrate of ammonia (available)	.05	1.00
In precipitated bone	.0475	.95
In basic slag phosphate	.06	1.20
In fine ¹ bone and tankage, and in fish	.04	.80
In coarse ¹ bone and tankage	.035	.70
In pulverized manures, seed residues, and ashes	.035	.70
Insoluble in neutral citrate of ammonia in mixed fertilizers	.015	.30
Potash.		
As sulfate	.0415	.83
As muriate	.0275	.55
As carbonate	.10	2.00
As nitrate	.035	.70
In potash-magnesia sulfate	.0525	1.05
In cotton hull and wood ashes (soluble)	.062	1.24
In organic vegetable compounds, sheep manure, and insoluble in ashes	.035	.70
Magnesium Oxide.		
Water soluble from Kieserite and Emjeo	.0615	1.23
In form of finely ground dolomite	.0625	.125

¹Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1/50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

The foregoing fertilizer trade values are based on average wholesale quotations of fertilizer chemicals and unmixed materials, as taken from trade journals for six months ending March 1, 1936, to which 20 per cent has been added for overhead. When appropriate, an additional allowance has also been made for bags, labor and transportation.

FERTILIZER TONNAGE.

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts.

	July 1, 1933, to July 1, 1934.	July 1, 1934, to July 1, 1935.	July 1, 1935, to July 1, 1936.
Mixed fertilizers	40,160	42,912	43,682
Fertilizer chemicals and materials unmixed	15,870	18,711	19,165
Pulverized natural manures	1,614	1,585	1,634
Totals	57,644	63,208	64,481

There were 1,273 tons more fertilizer sold in the state in 1936 than during the previous year. The tonnage of mixed fertilizer was 770 more, and that of the fertilizer chemicals and unmixed materials was 454 more than for 1935. Pulverized manures showed an increase of 49 tons. Of the total tonnage sold, 67.7 per cent was mixed fertilizer, 29.7 per cent was unmixed materials, and 2.6 per cent was dried and pulverized natural manures.

Plant Food Tonnage.

	Nitrogen.		Phosphoric Acid.		Potash.	
	1935.	1936.	1935.	1936.	1935.	1936.
Mixed fertilizers	2,231	2,238*	3,775	3,727*	3,048	3,097*
Fertilizer chemicals and materials unmixed	1,308	1,386	1,670	1,667	585	672
Pulverized natural manures	33	35	25	25	44	47
Totals	3,572	3,659	5,470	5,419	3,677	3,816

* Does not include plant food tonnage of 510 tons of fertilizer mixed for special orders.

There were 175 more tons of plant food sold in the state than during 1935, of which 87 tons were nitrogen and 139 tons potash: the available phosphoric acid showed a decrease of 51 tons.

There were 12,894 tons of plant food sold, of which 28 per cent was nitrogen, 42 per cent available phosphoric acid, and 30 per cent potash. Mixed fertilizers furnished 70 per cent of the plant food, chemicals and unmixed materials 29 per cent, and pulverized manures 1 per cent.

The three plant food elements were furnished in the following proportions by the mixed fertilizers and the unmixed materials, including the pulverized manures: nitrogen, 61 per cent from mixed and 39 per cent from unmixed; phosphoric acid, 69 per cent from mixed and 31 per cent from unmixed; potash, 81 per cent from mixed and 19 per cent from unmixed.

The following tables present tonnage figures for one year, July 1, 1935, to July 1, 1936, for both mixed fertilizers and unmixed fertilizer materials. In case of the mixed fertilizers the grade represents the plant food guarantee of each fertilizer and is expressed in the order of nitrogen, available phosphoric acid, potash.

--------	----	---	--------	---	---

Of the 43,219 tons of complete fertilizer sold, 76 per cent was furnished by 9 grades and 133 brands. Double- and multiple-strength grades totaled 2,416 tons and 29 brands, which was 429 tons more than during the previous year.

Of the mixed fertilizer sold, 99 per cent contained 14 per cent or over of available plant food.

There were 268 tons less of low-analysis (less than 14 per cent available plant food) complete fertilizers sold than in 1935. The 5-3-5 grade, comprising 7 brands, furnished 77 per cent of the tonnage of this class of goods.

In the following table are listed ten of the most popular grades of mixed fertilizer together with the tonnage of each sold in Massachusetts for the years 1935 and 1936.

1935.		1936.	
GRADE.	Tonnage.	GRADE.	Tonnage.
5-8-7	14,111	5-8-7	13,752
4-8-4	7,491	4-8-4	7,122
4-8-7	3,921	4-8-7	3,526
4-8-10	2,131	7-6-6	2,074
7-6-6	1,980	4-8-10	2,053
3-10-4	1,107	6-3-6	1,402
4-8-8	1,048	4-8-8	1,112
4-12-4	939	3-10-4	1,013
5-8-10	879	4-12-4	983
6-3-6	851	5-8-10	930

The following table shows how the tonnage sold in 1936 corresponds with the New England Standard Nine grades selected by the New England Agronomists in 1931.

NEW ENGLAND STANDARD NINE GRADES.	Tonnage.	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods.	Total.
5-8-7	13,752	7,211 ^a	20,963
4-8-4	7,471 ^b	105	7,576
6-3-6	1,442 ^c	1,020	2,462
7-6-6	2,074	125	2,199
4-8-10	2,157 ^d	-	2,157
3-10-4	1,013	649	1,662
5-8-10	930	-	930
2-8-10	167 ^e	-	167
2 12-4	60	-	60
Totals	29,066	9,110	38,176

^a Including 905 tons of 8-16-14, 827 tons of 8-16-16, and 187 tons of 12-16-12.

^b Including 338 tons of 5-10-5 and 11 tons of 15-30-15.

^c Including 39 tons of 10-5-10 and 1 ton of 8-4-8.

^d Including 104 tons of 8-16-20.

^e Including 81 tons of 4-16-20.

Of the total tonnage of mixed fertilizer sold in Massachusetts, 67 per cent was from grades recommended by New England Agronomists to meet New England conditions, and 21 per cent additional tonnage was from grades varying but one per cent in one or more plant food elements from the grades thus recommended. Of the ten grades, including the multiple strength mixtures, that have the highest tonnage (36,640 tons), all but three were among the New England Standard Nine. These seven grades showed a total tonnage of 28,839.

Over 20 per cent of the total tonnage of mixed fertilizer was from five grades not included in the New England Standard Nine. They are 4-8-7, 8-16-14, third largest tonnage sold; 4-8-8, 8-16-16, sixth largest; 4-12-4, 8-24-8, eighth largest; 3-10-6, thirteenth largest; and 6-3-7, fourteenth largest.

The tonnage of unmixed materials, as shown in the following table, was distributed as follows: nitrogen products, 40 per cent; phosphoric acid products, 29 per cent; potash products, 6 per cent; tankage, fish, bone, nitrate of potash, Ammo-Phos, and wood ashes, 19 per cent; and miscellaneous, 6 per cent. Pulverized animal manures are not included.

Brands deficient in available phosphoric acid	22	22	33
Brands deficient in potash	37	17	26
Brands deficient in magnesium oxide	0	3	0

Serious Commercial Shortages in Mixed Fertilizers.

AMOUNT OF SHORTAGE PER TON.	NUMBER OF BRANDS ACCORDING TO YEARS.			
	1933.	1934.	1935.	1936.
More than \$5	1	1	1	none
Between \$4 and \$5	none	none	none	none
Between \$3 and \$4	none	none	1	1
Between \$2 and \$3	2	none	none	none
Between \$1 and \$2	1	1	2	none

Of the 285 brands analyzed, 215, or 75 per cent, showed no deficiencies. Out of 875 plant food guarantees made, 91 per cent were fully maintained.

The deficiency table shows the following statistics:

Deficiencies not exceeding $\frac{1}{4}$ of one per cent, 37.

Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of one per cent, 23.

Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of one per cent, 11.

Deficiencies more than $\frac{3}{4}$ of one per cent, 10.

Of the total number of guarantees of each element made, 8 per cent of the nitrogen, 12 per cent of the available phosphoric acid, and 9 per cent of the potash were not met. Twelve of the 22 nitrogen deficiencies, 14 of the 33 available phosphoric acid deficiencies, and 11 of the 26 potash deficiencies did not exceed $\frac{1}{4}$ of one per cent.

Compared with the 1935 inspection, there were 2 more shortages in nitrogen, 11 more in available phosphoric acid, and 9 more in potash.

In the case of those fertilizers which did not conform strictly to the guarantee, the discrepancies were of such a character as to make it evident that there was no intentional attempt at violation of the regulations.

Fifteen different firms have registered five or more brands of mixed fertilizers. On the basis of composition found by analysis as well as upon tonnage sold, the following table shows to what extent each manufacturer was successful in avoiding deficiencies in plant food guarantees in his mixtures. All but two of the fifteen firms provided a satisfactory average over-run in the three major plant food elements guaranteed.

Mixing Efficiency Table.

MANUFACTURER.	AVERAGE PERCENTAGE OF PLANT FOOD ABOVE OR BELOW THE MINIMUM GUARANTEE.		
	Nitrogen.	Available Phosphoric Acid.	Potash.

Total	39,728	42,682	43,139	Net acidity	4,663	3,395	3,255

AVERAGE ANALYSIS OF MIXED FERTILIZERS.*

	1934.	1935.		1936.	
	Found.	Guaranteed.	Found.	Guaranteed.	Found.
Nitrogen	5.08	4.82	5.26	4.98	5.18
Available phosphoric acid	8.61	8.04	8.90	8.26	8.63
Potash	6.89	6.59	7.19	6.82	7.17

* Does not include fertilizers mixed for special orders.

Although there was a greater tonnage of double- and multiple-strength fertilizers sold in 1936 than in the preceding year, the average analysis found is lower than in 1935. This is due to the fact that the manufacturers allowed a much more liberal average over-run in all three plant foods in 1935 than in 1936. Therefore, while the guaranteed average analysis for 1936 is higher, the actual average analysis is lower than for 1935. The above table shows that the trend continues toward the manufacture of higher grade fertilizers.

Explanation of Tables of Analyses.

Guarantee. The plant food guarantee or the grade of each fertilizer is made a part of the trade name under the heading "Name of Manufacturer, Brand and Grade," and is expressed as nitrogen, available phosphoric acid and water soluble potash and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1936, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

a Average percentage of chlorine, .20%.

b Average percentage of chlorine, .23%.

c Average percentage of chlorine, .46%.

d Total potash.

e Not counting the value of the phosphoric acid or potash.

f Magnesium oxide, 12.92%; chlorine, 1.37%.

g Calcium oxide, 12.25%; magnesium oxide, 5.58%; moisture, 5.78%; insoluble matter, 15.56%.

h Calcium oxide, 35.72%; magnesium oxide, 4.09%; moisture, 9.09%; insoluble matter, 8.56%.

i Chlorine, .09%.

j Average tankage finer than 1/50 inch, 49.83%; coarser than 1/50 inch, 50.17%.

k Average bone finer than 1/50 inch, 72.20%; coarser than 1/50 inch, 27.80%.

l Organic matter, 66.08%.

m Average organic matter: sheep manure, 42.53%; sheep and goat manure, 39.80%; cattle manure, 69.78%; poultry manure, 62.09%; poultry manure and peat, 69.46%; sheep manure and wool waste, 44.55%.

Note: The average pound cost of nitrogen, phosphoric acid and potash from all of the pulverized natural manures taken collectively would be as follows: nitrogen, 73 cents; phosphoric acid, 16 cents, and potash, 16 cents.

Nitrogen Compounds.

The chemicals and unmixed materials under this heading are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element; the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton are listed by themselves, serious deficiencies being emphasized by boldface type.

Brand Showing Commercial Shortage of More than \$1 per Ton.

International Agricultural Corp.	19.82	20.56c	-	-	-	-
----------------------------------	-------	--------	---	---	---	---

a Champion brand.

b Standard brand.

c Commercial shortage, \$1.11 per ton. Explanation of manufacturer: This product was re-milled and in putting it through the grinder it was contaminated by other plant foods in the mill. We ran a test by the modified Kjeldahl method and found 20.18% total nitrogen; there was also present .53% phosphoric acid and .43% water soluble potash. This confirms the findings of the manufacturer.

Apothecaries Hall Co.	Cal-Nitro (b)	1	19.41	20.50
E. E. Williams, Agent for American Hydrolizer Co.	Hydrocide Formula L (c)	1	32.88	46.00

a Nitrogen practically all as nitrate.

b This product, imported by the Synthetic Nitrogen Products Corp., 285 Madison Ave., New York City, is usually shipped in tight paper-lined bags, but due to an error in shipping this particular lot it was put into unlined bags, and due also to the unusually wet conditions which prevailed during the early spring, the product absorbed an excessively large amount of water which correspondingly lowered the percentage of nitrogen contained in a given weight of the material. A satisfactory settlement was made by the Synthetic Nitrogen Products Corp. for the nitrogen deficiency on that portion of the lot that was sold at retail. The balance of the product was returned to the distributor, Apothecaries Hall Co., Waterbury, Conn. The product showed a commercial shortage of \$1.88 per ton.

c The product was Synthetic Urea, to which some coloring matter had been added to facilitate its use in the hydrolizer with hose attachment. Less than 100 pounds was sold in the state. The nitrogen guarantee will be reduced before another season. The commercial shortage was \$30.18 per ton.

* This product is said to be a decomposed mixture of fish and cocoa shells. The water insoluble organic nitrogen shows an activity of 80.20% by the neutral permanganate method. The passing mark is 80. There are only traces of chlorine present and the fertilizer is slightly alkaline in reaction. For most cultivated crops it should be supplemented by the appropriate amount of superphosphate and potash salt.

Menderth

Manufactured by Menderth, Inc.

PLANT FOOD ELEMENTS.	GUARANTEED.	FOUND SOLUBLE IN STRONG HYDROCHLORIC ACID.
Potassium oxide	3.00	1.38
Phosphoric acid13	.13
Calcium oxide	3.00	2.06
Magnesium oxide	2.00	2.58

NOTE: The product contained .12% water soluble potassium oxide and 75.08% of insoluble matter. The commercial value of the plant food contained in one ton of the product, based upon its content of potash, phosphoric acid, calcium and magnesium, soluble in strong hydrochloric acid, would be about \$1.59. Any potash, phosphoric acid, calcium or magnesium that may be present in the product in a form insoluble in strong hydrochloric acid would have little or no value. For this reason a fusion test was not made for the total amount of these elements present.

Bulletin No. 85

October, 1936

Inspection of Commercial
Feedstuffs

By Philip H. Smith

This is the forty-second report of feeding stuffs inspection and presents the results of analysis of 1,801 samples of feeding stuffs intended for livestock and poultry consumption, collected during the year ending September 1, 1936. In addition will be found tables showing the physical and chemical analyses of 55 samples of oats found for sale in the Massachusetts markets.

The calcium and phosphorus content of chick starting and growing feeds collected during the past year is also shown.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

During the past year 1,045 brands of feed have been registered for sale by 208 manufacturers and dealers; 1,801 samples of feeding stuffs have been collected and subjected to analysis; 200 dealers, located in 106 towns, have been visited by the feed inspector at least once.

Work in connection with purchases of grain and feed for use in State institutions is increasing. Since September 1, 1935, over 100 such samples have been examined, in addition to many samples submitted by other departments of the State College.

In the attempt to have this publication carry information supplementary to that which merely complies with the feeding stuffs statute, information relative to the quality of whole oats offered for sale in Massachusetts, and the calcium and phosphorus content of proprietary chick and growing mashes is also included.

¹The following staff members assisted in the inspection: Albert F. Spelman and John W. Kuzmeski, chemists; Frederick A. McLaughlin and Olive M. Hoefle, microscopists and seed analysts; James T. Howard, inspector, Cora B. Grover, clerk.

Certified Ingredients.

Allied Mills, Inc.

Empire 20% Dairy Ration

Soybean oil meal, cottonseed meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 2% ground limestone and 1% salt.

Empire 16½% Dairy Ration

Corn distillers' dried grains, brewers' dried grains, soybean oil meal, corn gluten feed, corn gluten meal, cottonseed oil meal, corn meal, wheat bran, ground and bolted screenings from flax, wheat, corn, oats and barley, clipped oat by-products, cane molasses, 1% ground limestone and 1% salt.

Empire Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn gluten feed, corn meal, fine ground oats, 1% ground limestone and 1% salt.

Empire Egg Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn gluten feed, corn meal, fine ground oats, 1% ground limestone, 1% salt and sardine oil.

Empire Growing Mash

Corn meal, wheat bran, soybean oil meal, fine ground oats, meat scraps, fish meal, wheat standard middlings, choice alfalfa meal, corn gluten feed, dried skim milk, dried buttermilk, 1% fat and 1% ground limestone.

Wayne Amco 24% Dairy Ration

Cottonseed meal, corn gluten meal, corn distillers' dried grains, brewers' dried grains, corn gluten feed, old process linseed oil meal, soybean oil meal, peanut oil meal, ground oats, corn meal and hominy meal, wheat bran, cane molasses, 0.5% steamed bone meal, 1.265% ground limestone, 1.2% salt, 0.0345% iron oxide and 0.0005% potassium iodide.

Wayne Amco 20% Dairy Ration

Cottonseed meal, brewers' dried grains, corn distillers' dried grains, ground oats, corn gluten feed, corn meal and hominy meal, soybean oil meal, corn gluten meal, old process linseed oil meal, wheat bran, cane molasses, 0.5% steamed bone meal, 1.265% ground limestone, 0.0345% iron oxide, 1.2% salt and 0.0005% potassium iodide.

Wayne Amco 16% Dairy Ration

Corn distillers' dried grains, corn gluten feed, old process linseed oil meal, corn meal, hominy meal, soybean oil meal, ground oats, wheat bran, cane molasses, 0.5% steamed bone meal, 1% ground limestone, 1% salt, 0.03% iron oxide and 0.0005% potassium iodide.

Wayne Amco 32% Supplement Dairy Ration

Soybean oil meal, corn gluten meal, corn distillers' dried grains, cottonseed meal, peanut oil meal, corn gluten feed, old process linseed oil meal, wheat bran, cane molasses, 0.75% steamed bone meal, 2% ground limestone, 1.2% salt, 0.0495% iron oxide and 0.0005% potassium iodide.

Wayne Breeder Mash

Fish meal, meat scraps, dried buttermilk, dried skim milk, soybean oil meal, choice alfalfa meal, wheat bran, corn meal, corn germ oil meal, wheat standard middlings, fine ground oats, crab meal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Broiler Ration

Dried buttermilk, dried skim milk, meat scraps, fish meal, ground yellow corn, fine ground oats, wheat standard middlings, wheat bran, soybean oil meal, choice alfalfa meal, 1.5% ground limestone, 0.04% iron oxide, 0.0005% potassium iodide, 0.25% salt and sardine oil.

Wayne Chick Starter

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Egg & Breeder Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, wheat bran, corn meal, fine ground oat meal, corn gluten feed, choice alfalfa meal, soybean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Growing Mash with Sardine Oil

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Poultry Fattener

Ground yellow corn, corn germ oil meal, white hominy feed, rolled oats, oat flour, fine ground oats, wheat standard middlings, wheat red dog, old process linseed oil meal and 1% salt.

Wayne Turkey Starting Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, wheat standard middlings, corn meal, choice alfalfa meal, soybean oil meal, wheat bran, fine ground oats, 1% charcoal, 2% ground limestone, 0.15% iron oxide, 0.002% potassium iodide, 0.5% salt and sardine oil.

A. P. Ames Co.

Ames Complete Growing Egg Ration

Dried skim milk, pulverized whole oats, corn meal, wheat bran, wheat middlings, leaf alfalfa meal, meat scraps, fish meal, calcium carbonate, salt, and cod liver oil.

Ames Complete Starter and Broiler Ration

Corn meal, wheat middlings, dried skim milk, pulverized whole oats, wheat bran, alfalfa leaf meal, cod fish meal, meat scraps, calcium carbonate, salt and Clo-Trate concentrated cod liver oil.

Ames Egg Mash

Corn meal, wheat middlings, pulverized whole oats, wheat bran, cod fish meal, meat scraps, alfalfa leaf meal, dried skim milk, calcium carbonate, salt, Clo-Trate concentrated cod liver oil.

Ames 20% Milk Maker

Gluten, corn meal (and, or hominy), wheat bran, wheat middlings, linseed meal (and, or soybean oil meal, and, or cottonseed meal), oat feed, calcium carbonate, bone meal and salt.

Arcady Farms Milling Co.

Arcady 20% Open Formula Production Ration

Soy bean oil meal, cottonseed meal, o. p. linseed oil meal, standard wheat bran, brewers dried grains, corn gluten feed, corn gluten meal, ground white oats, corn meal, cane molasses, 1% steamed bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady-Wonder Growing Mash

Fish meal, meat scraps, animal liver meal, dried buttermilk, o.p. linseed oil meal, corn gluten feed, corn meal, wheat bran, wheat middlings, alfalfa meal, fortified cod liver oil, soy bean oil meal, ground oats, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt, 1 $\frac{1}{2}$ oz. potassium iodide per ton.

Arcady-Wonder Laying Mash

Fish meal, meat scraps, animal liver meal, soy bean oil meal, dried buttermilk, o.p. linseed oil meal, oat meal, corn meal, corn gluten feed, alfalfa meal, fine ground oats, wheat bran, wheat middlings, fortified cod liver oil, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt, 1 $\frac{1}{2}$ oz. potassium iodide per ton.

W. E. Atkinson Co.

Weaco Dry Mash

Corn meal, bran, middlings, ground oats, meat scraps, gluten feed, dried skim milk, alfalfa leaf meal, fish meal, calcium carbonate, salt, cod liver oil.

Barber & Bennett, Inc.

Big Ben Brand 20% Dairy Feed

Ground screenings from wheat, corn and oats, corn gluten feed, ground barley, wheat bran (may contain mill run screenings), soybean oil meal, rye and corn distillers' grains, cane molasses, calcium carbonate from limestone, steamed bone meal, 1% salt, potassium iodide, not less than .0017% iodine.

Double Value 24% Dairy Feed

Corn gluten feed, wheat bran (may contain mill run screenings), hominy feed and corn meal, corn distillers' grains, soybean oil meal, ground barley, palm kernel meal, cane molasses, steamed bone meal, salt.

Double Value 20% Dairy Feed

Corn gluten feed, wheat bran (may contain mill run screenings), hominy feed and corn meal, corn distillers' grains, soybean oil meal, ground barley, palm kernel meal, cane molasses, steamed bone meal, salt.

Beacon Milling Co., Inc.

Auburn Brand Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soybean oil meal, ground oats, corn meal, ground grain screenings, cottonseed meal, wheat bran, ground barley, brewer's dried grains, corn distillers' dried grains, molasses, 1% salt, 1% calcium carbonate, 1% calcium phosphate.

Beacon's Cayuga Growing Mash

Dried skim milk, fish meal, meat scrap, pulverized heavy oats, corn meal, pulverized heavy barley, wheat bran, wheat middlings, dehydrated alfalfa leaf meal, anti-rachitic oil, 2% calcium carbonate, $\frac{1}{2}$ % salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Complete Starting Ration

Dried skim milk, meat scrap, fish meal, ground yellow corn, ground hulled oats, pulverized heavy oats, pulverized heavy barley, wheat bran (may contain mill run screenings), wheat red dog flour, dehydrated alfalfa leaf meal, anti-rachitic oil, 2% calcium carbonate, $\frac{1}{2}$ % salt.

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, ground oats, wheat bran, wheat middlings, 1% calcium carbonate, 1% calcium phosphate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Beacon Duck Breeder Pellets

Dried skim milk, meat scrap, fish meal, corn meal, pulverized heavy barley, wheat bran (may contain mill run screenings), wheat red dog flour, ground oat groats, dehydrated alfalfa leaf meal, anti-rachitic oil, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Duck Laying Pellets

Dried skim milk, meal scrap, fish meal, corn meal, pulverized heavy barley, pulverized heavy oats, wheat bran (may contain mill run screenings), wheat red dog, dehydrated alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, anti-rachitic oil, 2% calcium carbonate, $\frac{3}{4}$ % salt.

Beacon Fleshing Pellets

Dried skim milk, pulverized heavy oats, pulverized heavy barley, wheat low grade flour, corn meal, corn oil meal, wheat germ meal, anti-rachitic oil, $2\frac{1}{2}$ % calcium carbonate, 1% salt.

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewer's dried grains, corn distiller's dried grains, wheat bran (may contain mill run screenings), ground oats, ground barley, molasses, 1% salt, 1% calcium carbonate.

Beacon Sweet "20"

Old process linseed oil meal, soy bean oil meal, corn distiller's dried grains, cottonseed meal, wheat bran, wheat middlings, brewer's dried grains, corn gluten meal, corn gluten feed, ground barley, corn meal, ground oats, molasses, 1% calcium carbonate, 1% salt. (Wheat bran or middlings may contain mill run screenings.)

Berkshire Coal & Grain Co., Inc.**Berkshire Hills Sweet Dairy Feed**

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats, brewers grains, calcium carbonate, cane molasses and salt.

Green Mountain Dairy Ration

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats and barley, calcium carbonate, salt.

Green Mountain Laying Mash

Wheat bran, wheat middlings, linseed oil meal, corn meal, fine ground oats, alfalfa meal, meat scraps, bone meal, fish meal, dried skim milk, calcium carbonate, salt, Nopec XX cod liver oil.

Borden Grain Co.**Borden's Dairy Feed**

Wheat bran, wheat middlings, corn meal (or hominy), gluten meal, gluten feed, cottonseed meal, soy bean oil meal, linseed oil meal, calcium carbonate, bone meal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oat meal, dried milk, alfalfa leaf meal, fish meal, meat scrap, soy bean oil meal, cod liver oil, calcium carbonate, salt.

Geo. B. Brown**Brown's Dairy Feed**

Hominy feed, corn meal, wheat bran, o. p. linseed meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt.

Brown's Egg Mash

Corn meal, dried milk, wheat middlings, leaf alfalfa meal, ground oats, charcoal, wheat bran, calcium carbonate, meat scraps, salt, bone meal, cod liver oil.

Community Feed Stores, Inc.**Community-20 Dairy Ration**

Corn distillers dried grains, 41% cotton seed meal, soya bean meal, corn gluten feed, yellow corn meal or hominy, pure ground oats, wheat bran, molasses, salt, calcium carbonate.

Community Growing Mash

Yellow corn meal or hominy, pure ground oats, wheat bran, wheat middlings, alfalfa meal, soya bean meal, dried milk, choice meat scraps, pure fish meal, oyster shell meal, salt, cod liver oil.

Community Laying Mash

Yellow corn meal or hominy, pure ground oats, wheat bran, gluten, wheat middlings, choice meat scraps, soya bean meal, dried milk, alfalfa meal, salt, calcium carbonate, oyster shell meal, cod liver oil.

Hilltop-20 Dairy Ration

41% cottonseed meal, corn gluten feed, hominy or corn meal, Vim oat mill feed, wheat bran, corn distillers dried grains, cane molasses, calcium carbonate, salt, soya bean meal.

Nicolas Courcy Grain Co.**Courcy's Dairy Feed**

Bran, middlings, Buffalo gluten, Diamond gluten, 41% cottonseed, linseed, meal or hominy, dairy salt, calcite flour.

Courcy's Eastern Laying Mash

Meal, wheat bran, ground oats, 45% beef scrap, middlings (standard), ground wheat, alfalfa leaf meal, fish meal, milk, calcite flour, salt, cod liver oil XX.

E. A. Cowee Co.**Coweco All Mash Ration**

Corn meal, ground wheat, cut oat groats, wheat bran, wheat middlings, soybean meal, alfalfa leaf meal, meat scraps, fish meal, dried milk, ground barley, edible bone meal, calcium carbonate, salt, cod liver oil.

Coweco Growing Mash

Wheat bran, middlings, corn meal, hominy, pulverized oats, ground barley, soybean meal, alfalfa leaf meal, red dog flour, calf meal, meat scraps, fish meal, dried milk, edible bone meal, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco Laying Mash

Wheat bran, middlings, oat meal, gluten feed, ground barley, soybean meal, meat scraps, fish meal, corn meal, dried milk, alfalfa leaf meal, edible bone meal, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco 1925 Ration

Wheat bran, middlings, corn meal, cottonseed meal, gluten feed, oil meal, coconut oil meal, hominy, ground oats, distillers grains, brewers grains, soybean meal, edible bone meal, salt, calcium carbonate and molasses.

Coweco 20% Ration

Wheat bran, middlings, corn meal, gluten feed, distillers grains, oil meal, soybean meal, coconut oil meal, ground oats, cottonseed meal, brewers grains, malt sprouts, edible bone meal, calcium carbonate, salt and molasses.

Coweco Starting Mash

Wheat bran, middlings, corn meal, oat meal, alfalfa leaf meal, soybean meal, fish meal, meat scraps, edible bone meal, dried milk, calcium carbonate, salt, with or without molasses, with or without cod liver oil.

Coweco Sunrise Complete Starting & Broiler Ration

Meal, bran, middlings, pulverized oats, ground wheat, soybean meal, beef scraps, alfalfa leaf meal, fish scraps, dried milk, bone meal, calcium carbonate, salt, cod liver oil.

Coweco Sunrise 20% Dairy Ration

Bran, middlings, meal, hominy, cottonseed meal, gluten feed, oil meal, ground barley, dried brewers grains, soybean meal, distillers grains, coconut oil meal, malt sprouts, bone meal, calcium carbonate, salt and molasses.

Coweco Sunrise Growing Mash

Wheat bran, middlings, corn meal, red dog, hominy, copra meal, soybean meal, dried milk, ground alfalfa, beef scraps, fish scraps, bone meal, calcium carbonate, salt and cod liver oil, ground barley.

Coweco Sunrise Laying Mash

Wheat bran, middlings, corn meal, hominy, ground oats and barley, gluten, dried milk, soybean meal, meat scraps, alfalfa meal, edible bone meal, calcium carbonate, salt, with or without cod liver oil.

Dairy-Aide 24% Ration

Bran, middlings, ground barley, brewers grains, distillers grains, reground grain screenings, soybean meal, cottonseed meal, peanut meal, molasses, calcium carbonate, bone meal and salt.

Dairy-Aide 20% Ration

Wheat bran, middlings, ground barley, brewers grains, distillers grains, reground grain screenings, soybean meal, cottonseed meal, peanut meal, bone meal, calcium carbonate, salt and molasses.

Chas. M. Cox Co.

Utility Growing Ration

Dried skim milk, ground oats, alfalfa meal, wheat bran, gluten feed, ground barley, fish meal cod liver oil, wheat middlings, calcium carbonate, meat scrap, yellow corn meal, soy bean meal, gluten meal, salt.

Utility Starting Ration

Dried skim milk, cod liver oil, soy bean meal, wheat middlings, ground oats, ground barley, fish meal, wheat bran, ground wheat, calcium carbonate, meat scrap, yellow corn meal, gluten meal, alfalfa meal, salt.

Utility Laying Ration

Dried skim milk, meat scrap, fish meal, alfalfa meal, gluten meal, ground barley, ground wheat, yellow corn meal, wheat bran, wheat middlings, gluten feed, cod liver oil, ground oats, calcium carbonate, salt.

Curley Brothers

Crystal All Grain Starting Food

Pure dry buttermilk, cod liver oil, yellow corn meal, ground oat groats, red dog flour, bran, alfalfa leaf meal, cracked wheat, fine cracked corn, steelcut oatmeal, steamed edible bone meal, powdered charcoal, salt, calcium carbonate, white fish meal.

Crystal 24% Dairy Ration

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers grains, hominy feed, ground barley, ground oats, bran and middlings with mill run of screenings, edible bone meal, salt, calcium carbonate.

Crystal 20% Dairy Ration

Corn gluten feed, yellow corn meal, hominy feed, bran and middlings with mill run of screenings, cottonseed meal, linseed oil meal, beet pulp, steamed edible bone meal, calcium carbonate, salt.

Crystal Egg Mash

Linseed oil meal, yellow hominy feed, yellow corn meal, bran and middlings, with mill run of screenings, feeding oatmeal, red dog, alfalfa poultry greens, beef scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash

Cod liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran and middlings with mill run of screenings, feeding oatmeal, yellow hominy feed, yellow corn meal, calcium carbonate, salt.

Premier Growing Mash

Meal, bran, middlings, red dog, ground barley, ground oats, dried skim milk, linseed oil meal alfalfa leaf meal, meat meal, fish meal, bone meal, calcite, salt.

Cutler Co.

King Complete Chick Starter and Broiler Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), ground oat groats, meat scraps, fish meal, alfalfa leaf meal, corn gluten meal, soybean oil meal, yellow corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

King Complete Growing Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, soybean oil meal, corn gluten meal, ground yellow corn, ground wheat, ground oats, ground barley, wheat bran, wheat middlings, alfalfa leaf meal, calcium carbonate and salt.

King 20 Dairy Feed Sweetened

Fortified cod liver oil, corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, ground barley, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

King Growing Mash

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, wheat red dog, calcium carbonate and salt.

Delaware Mills, Inc.

Delaware All Mash Chick Starter

Cod liver oil, dried skim milk, meat scrap, fish meal, oatmeal, alfalfa leaf meal, corn meal, wheat bran, wheat middlings, wheat reddog flour, bone meal, phosphatic calcium carbonate, charcoal and salt.

Delaware Sweet 24% Dairy Feed

Cane molasses, corn gluten feed, corn gluten meal, linseed oil meal, cottonseed meal, soybean oil meal, hominy feed, peanut oil meal, corn meal, wheat bran, wheat middlings, salt, phosphatic calcium carbonate.

Delaware Laying Mash

Cod liver oil, dried skim milk, meat scrap, bone meal, fish meal, soybean oil meal, corn gluten feed, corn meal, wheat bran, wheat middlings, wheat red dog flour, oatmeal, ground barley, alfalfa leaf meal, phosphatic calcium carbonate, $\frac{1}{2}$ of 1% salt.

Delco 20% Dairy Feed

Dried beet pulp, linseed oil meal, corn gluten feed, corn gluten meal, soybean oil meal, peanut oil meal, cottonseed meal, wheat bran, wheat middlings, hominy feed, ground oats, salt, phosphatic calcium carbonate.

Delco Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, corn gluten meal, cottonseed meal, soybean oil meal, peanut oil meal, wheat bran, wheat middlings, hominy feed, ground oats, ground barley, phosphatic calcium carbonate, salt.

Indian Growing Mash

Dried skim milk, meat scrap, fish meal, bone meal, soybean oil meal, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt.

Indian Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, cottonseed meal, soybean oil meal, peanut oil meal, wheat bran, wheat middlings, corn meal, reground oatfeed, ground buckwheat, phosphatic calcium carbonate and salt.

Indian Laying Mash

Dried skim milk, meat scrap, fish meal, bone meal, soybean oil meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt.

Frank Diauto

Diauto's Special Egg Mash

Linseed meal, cod liver oil, corn meal, bran, middlings, ground oats, oat meal, oyster shell meal, meat scraps 50%, fish meal, dried milk, bean meal, ground barley, salt.

Diauto's Broiler Ration

Soy bean meal, yellow meal, bran, wheat flour middlings, ground oats, skim milk, alfalfa leaf meal, meat scraps 50%, cod liver oil, calcium carbonate, salt, fish meal 55%.

Diauto's Dairy Feed

Gluten feed, corn meal, ground oats, bran, linseed meal, cottonseed meal, salt.

Diauto's Fancy Chick Growing Mash

Middlings, bran, ground oats, oat meal, alfalfa meal, oyster shell meal, meat scraps 50%, dried milk, bean meal, salt, cod liver oil, corn meal, fish meal.

F. Diehl & Son, Inc.

Diehl's Dairy Feed

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products, ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, Banner feed, bone, dried milk, charcoal, fish scraps, gluten meal, linseed, meal, meat scraps, middlings and red dog.

Dietrich & Gambrill, Inc.

All Purpose Complete Ration Starter-Grower-Layer

Coarse ground yellow corn, coarse ground wheat, pulverized oats, flour middlings, wheat bran, alfalfa leaf meal, dried buttermilk, meat scrap, fish meal, soy bean meal, steamed bone meal, 1% calcium carbonate, 1% salt, cod liver oil, potassium iodide.

D. & G. Dairy Feed

Cottonseed meal, peanut meal, linseed meal, gluten feed, corn feed meal, wheat bran, ground grain screenings, clipped oat byproducts, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

D. & G. Poultry Conditioning Ration

Cracked wheat, fine chick corn, corn meal, reddog, pulverized oats, wheat bran, alfalfa leaf meal, dried buttermilk, fish meal, meat scrap, soy bean meal, grit, bone meal, calcium carbonate, salt, mineral oil, peanut oil, cod liver oil, potassium iodide.

D. & G. Turkey Growing Mash

Pure corn meal, wheat bran, wheat middlings, pulverized oats, oat meal, alfalfa meal, soy bean meal, linseed meal, meat scrap, dried buttermilk, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Frederick Growing Mash

Wheat middlings, wheat bran, pulverized oats, corn feed meal, gluten feed, ground barley; soy bean meal, meat scrap, dried buttermilk, alfalfa leaf meal, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Frederick Laying Mash

Wheat bran, wheat middlings, corn feed meal, pulverized oats, ground barley, gluten meal, meat scrap, fish meal, alfalfa meal, soy bean meal, bone meal, 1% calcium carbonate, 1% salt, dried buttermilk, potassium iodide.

Gambrill's Chick Starter

Oat meal, corn meal, malt flour, alfalfa leaf meal, wheat flour middlings, soy bean meal, fish meal, meat scrap, dried buttermilk, cod liver oil, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Gambrill's 16% Dairy Feed

Cottonseed meal, peanut meal, gluten feed, wheat bran, corn feed meal, ground grain screenings from wheat, clipped oat byproducts, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Gambrill's Growing Mash

Wheat bran, wheat middlings, corn feed meal, soy bean meal, malt flour, oat meal, gluten meal, meat scrap, fish meal, dried buttermilk, cod liver oil, alfalfa leaf meal, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

J. L. Dunnell & Son

Excel 20 per cent Dairy Ration

Corn meal, gluten feed, cottonseed meal, wheat bran, ground oats, salt, bone meal, calcium carbonate.

Excel Mash

Corn meal, gluten feed, wheat bran, ground oats, reddog, fish scraps, dried milk, lime, salt and beef scraps.

East Bridgewater Farmers' Exchange

Special Dairy Feed

Beet pulp, bone meal, wheat bran, cottonseed meal, distillers' grain, Diamond gluten meal, ground oats, linseed meal, corn meal, or hominy, wheat middlings, molasses, salt, soy bean meal, brewer's grain.

Special Growing Feed

Fish meal, alfalfa leaf meal, beef scraps, ground barley, wheat bran, cod liver oil, dried skim milk, ground oats, wheat middlings, corn meal, reddog, calcium carbonate, soy bean meal, ground wheat.

Special Mash Feed

Yellow corn meal, wheat bran, reddog flour, fine ground beef scraps, alfalfa leaf meal, ground oats, ground barley, ground wheat, wheat middlings, dried skim milk, cod liver oil, soy bean meal, calcium carbonate.

Eastern Grain Co.

Eastern 24% Dairy Ration Sweetened

Wheat bran, wheat middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten meal, brewers grains, ground barley, corn meal, hominy, pure cane molasses, soy bean meal, high grade bone meal, calcium carbonate, salt.

Eastern 20% Dairy Ration Sweetened

Wheat bran, wheat middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten meal, brewers grains, ground barley, corn meal, pure cane molasses, hominy, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Eastern States Farmers' Exchange**Eastern States All-Mash Developer**

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground oats, E. S. ground barley, alfalfa leaf meal, 41% prot. soybean oil meal, dried skimmed milk, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Combination (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground oats, dried skimmed milk, alfalfa leaf meal, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Developer

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground barley, E. S. ground oats, dried skimmed milk, 41% protein soybean oil meal, alfalfa leaf meal, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Egg Mash

Wheat standard middlings, E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), E. S. ground barley, 58% protein fish meal, 50% protein meat scraps, 41% protein soybean oil meal, E. S. ground oats, alfalfa leaf meal, corn gluten meal, oyster shell meal, sardine oil, salt.

Eastern States Fattener Mash

E. S. yellow corn meal, corn oil meal, ground oat groats, dried skimmed milk, wheat standard middlings, wheat red dog, E. S. ground oats, 41% protein soybean oil meal, salt.

Eastern States Fulpail Dairy Ration

E. S. yellow corn feed meal, distillers' corn dried grains, wheat bran (may contain mill run wheat screenings), E. S. ground oats, 41% protein cottonseed meal, prime quality, 41% protein soybean oil meal, corn gluten feed, cane molasses, 37% protein old process linseed meal, E. S. ground barley, dicalcium phosphate, salt.

Eastern States Highland 20 Dairy Ration

Oat mill feed (oat hulls, oat shorts, oat middlings), distillers' corn dried grains, 41% protein cottonseed meal, prime quality, cane molasses, 41% protein soybean oil meal, E. S. yellow corn feed meal, E. S. ground barley, wheat bran (may contain mill run wheat screenings), corn gluten feed, 45% protein peanut oil meal, calcium carbonate, salt.

Eastern States Highland 16 Dairy Ration

E. S. yellow corn feed meal, oat mill feed (oat hulls, oat shorts, oat middlings), distillers' corn dried grains, cane molasses, E. S. ground barley, wheat bran (may contain mill run wheat screenings), corn gluten feed, 41% protein cottonseed meal, prime quality, 41% protein soybean oil meal, 45% protein peanut oil meal, calcium carbonate, salt.

Eastern States Highland 12

E. S. yellow corn meal, oat mill feed (oat hulls, oat shorts, oat middlings), wheat bran (may contain mill run wheat screenings), E. S. ground barley, cane molasses, distillers' corn dried grains, 41% protein soybean oil meal, alfalfa leaf meal, calcium carbonate, salt.

Eastern States Milkmore Dairy Ration

41% protein cottonseed meal, prime quality, distillers' corn dried grains, corn gluten feed, wheat bran (may contain mill run wheat screenings), 41% protein soybean oil meal, E. S. yellow corn feed meal, E. S. ground oats, cane molasses, 37% protein old process linseed meal, dicalcium phosphate, salt.

Eastern States Producer 20 (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, 50% protein meat scraps, E. S. ground oats, alfalfa leaf meal, 58% protein fish meal, 41% protein soybean oil meal, dried skimmed milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Producer (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, E. S. ground oats, 50% protein meat scraps, 58% protein fish meal, alfalfa leaf meal, dried skimmed milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Sixteen Dairy Ration

E. S. yellow corn feed meal, wheat bran (may contain mill run wheat screenings), E. S. ground oats, distillers' corn dried grains, cane molasses, corn gluten feed, E. S. ground barley, 41% protein cottonseed meal, prime quality, 37% protein old process linseed meal, 41% protein soybean oil meal, dicalcium phosphate, salt.

Eastern States Starting and Broiler Ration (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, ground oat groats, dried skimmed milk, alfalfa leaf meal, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, salt, sardine oil, dicalcium phosphate.

Eastern States 32% Supplement Feed

41% protein cottonseed meal, prime quality, 41% protein soybean oil meal, distillers' corn dried grains, corn gluten meal, 37% protein old process linseed meal, cane molasses, wheat bran (may contain mill run wheat screenings), dicalcium phosphate, salt.

Eastern States Turkey Breeder (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), 50% protein meat scraps, wheat flour middlings, dried skimmed milk, alfalfa leaf meal, 41% protein soybean oil meal, E. S. ground oats, 58% protein fish meal, corn gluten meal, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Turkey-Fat (Mash or Pelleted)

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, 50% protein meat scraps, E. S. ground oats, 41% protein soybean oil meal, alfalfa leaf meal, corn gluten meal, dried skimmed milk, ground oat groats, oyster shell meal, salt.

Eastern States Turkey-Grow (Mash or Pelleted)

Wheat bran (may contain mill run wheat screenings), wheat flour middlings, 41% protein soybean oil meal, 58% protein fish meal, ground oat groats, alfalfa leaf meal, dried skimmed milk, corn gluten meal, E. S. ground oats, 50% protein meat scraps, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Turkey-Start

E. S. yellow corn meal, wheat bran (may contain mill run wheat screenings), wheat flour middlings, 41% protein soybean oil meal, 58% protein fish meal, ground oat groats, corn gluten meal, alfalfa leaf meal, 50% protein meat scraps, dried skimmed milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Economy Grocery Stores, Corp.**Countryside Egg Mash**

Vitamin tested cod liver oil, dried buttermilk, alfalfa leaf meal, corn meal, ground barley standard wheat bran and wheat middlings, fish meal, meat scraps, linseed oil meal, gluten meal, soy bean meal, calcium carbonate, and salt.

Michael W. Ellis

The Ellis Dairy Feed

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers grains, cottonseed meal, oil meal, ground oats, calcite flour, salt, edible bone meal. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten feed, corn meal, rolled oats or feeding oatmeal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal, calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.**Elmore Chixsaver**

Dried skim milk, wheat flour middlings, wheat bran, corn meal, alfalfa leaf meal, oat flour, meat and bone meal, fish meal, cod liver oil, oyster shell flour, fine table salt.

Elmore Complete Broiler Ration

Yellow corn meal, wheat bran, wheat middlings, oat meal flour, meat and bone meal, dried buttermilk, alfalfa leaf meal, fish meal, soybean meal, cod liver oil, oyster shell flour, salt.

Elmore Complete Laying Ration

Meat and bone meal, fish meal, whole oat groats, corn meal, ground wheat, alfalfa leaf meal, wheat bran, wheat middlings, dried skim milk, cod liver oil, calcium carbonate, salt.

Elmore Egg Mash

Dried skim milk, meat meal, second clear wheat flour, pure ground oats, wheat middlings, corn meal (No. 2 yellow), wheat bran, alfalfa leaf meal, fish meal, bone meal, cod liver oil, oyster shell flour, salt.

Elmore M. A. C. Laying Mash

Alfalfa leaf meal, wheat bran, corn meal, fish meal, wheat middlings, dried skim milk, ground heavy oats, meat scraps, oyster shell flour, cod liver oil, salt.

Elmore Milk Grains

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soybean oil meal, calcium carbonate and salt.

Elmore Milk Grains Junior 20%

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soybean oil meal, calcium carbonate, salt.

Elmore Milk Grains Junior Sweet

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soybean oil meal, molasses, calcium carbonate, salt.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cotton seed meal, wheat bran, cocoanut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Emco Feed

Wheat bran, wheat midds, linseed oil meal, beet pulp, corn gluten feed, corn meal or hominy feed, cotton seed meal calcium carbonate, salt.

Granger 20% Dairy Ration

Wheat bran, wheat midds, ground barley, cottonseed meal, corn gluten feed, corn meal or hominy feed, soybean meal, cane molasses, reground wheat screenings, ground oats, dried brewers' grains, copra oil meal, calcium carbonate, salt.

Waldorf 20% Ration

Wheat bran, copra oil meal, corn gluten feed, soybean oil meal, cotton seed meal, cane molasses, pure ground oats, reground wheat screenings, calcium carbonate, salt.

John W. Eshelman & Sons**Eshelman Challenge Dairy Feed**

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Conestoga 20 Dairy Feed

Cottonseed meal, wheat bran, cane molasses, corn gluten feed, brewers' dried grains, corn distillers' dried grains, soybean oil meal, o. p. oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, cottonseed meal, ground oats, corn gluten feed, cane molasses, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman 32% Mixing Ration

Cottonseed meal, corn gluten meal, corn gluten feed, wheat bran, cane molasses, o. p. oil meal, soybean oil meal, corn distillers' dried grains, brewers' dried grains, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Pennsy 16 Dairy Feed

Wheat bran, cottonseed meal, cane molasses, corn gluten feed, brewers' dried grains, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, oat mill feed (oat midds, oat hulls, oat shorts), 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Pennsy Laying Mash

Corn meal, wheat middlings, meat scrap, wheat bran, ground oats, alfalfa meal, soybean oil meal, cane molasses, fish meal, corn gluten feed, o. p. oil meal, 1% calcium carbonate, ½% salt.

Eshelman Red Rose All Mash Starter

Corn meal, wheat bran, wheat middlings, pure oat meal, meat scrap, fish meal, soybean oil meal, alfalfa leaf meal, dried buttermilk, o. p. oil meal, 2% calcium carbonate, 1¼% bone meal, ½% salt, ½% fortified cod liver oil.

Eshelman Red Rose 24 Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Growing Mash

Wheat middlings, corn meal, wheat bran, meat scrap, pulverized oats, corn gluten feed, oat meal, soybean oil meal, hominy feed, o. p. oil meal, fish meal, dried buttermilk, fine alfalfa meal, 1% calcium carbonate, ½% salt, ¼% fortified cod liver oil.

Eshelman Red Rose Laying Mash

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o. p. oil meal, fish meal, soybean oil meal, hominy feed, fine alfalfa meal, dried buttermilk, 1% calcium carbonate, ½% salt, ¼% fortified cod liver oil.

Farm Service Stores, Inc.**C Dairy Feed**

Corn meal or hominy, cottonseed meal, oil meal or soybean meal, wheat bran (with wheat screenings), wheat midds (with wheat screenings), corn gluten feed, corn gluten meal, beet pulp, salt.

C Growing Mash

Corn meal or hominy, mixed feed, ground oats, meat scraps, dried milk, fish scraps, alfalfa meal, calcium carbonate, salt, cod liver oil.

C Laying Mash

Corn meal or hominy, mixed feed, corn gluten feed, oil meal or soybean meal, meat scraps, alfalfa meal, ground oats, bone meal, calcium carbonate, salt, fish meal.

18% Dairy

Corn meal or hominy, oil meal or soybean meal, cottonseed meal, corn gluten feed, dried grains, wheat bran with wheat screenings, ground grain screenings, oatmeal mill by-products, calcium carbonate, molasses, salt.

Diamond A Dairy

Corn meal or hominy, oil meal or soybean meal, corn gluten feed, wheat bran (with wheat screenings), dried grains, corn gluten meal, cottonseed meal, stock feed, salt, calcium carbonate.

Diamond C Dairy

Wheat bran (with wheat screenings), wheat midds (with wheat screenings), corn meal or hominy, cottonseed meal, oil meal or soybean meal, beet pulp, corn gluten feed, corn gluten meal, salt.

Lawrence Cow Ration

Wheat bran (with wheat screenings), corn meal or hominy, ground or pulverized oats, corn gluten feed, cottonseed meal, oil meal or soybean meal, dried grains, molasses, salt.

New England Dairy Ration

Corn gluten meal, corn gluten feed, wheat bran (with wheat screenings), corn meal or hominy, oil meal or soybean meal, cottonseed meal, ground oats, ground limestone, molasses, salt.

North Star Chick Starter

Wheat bran (with wheat screenings), flour midds (with ground screenings), corn meal or hominy, feeding oatmeal, meat scraps, fish meal, dried milk, alfalfa meal, calcium carbonate, salt, cod liver oil.

North Star 24% Dairy Feed

Corn meal or hominy, ground oats, soybean meal or oil meal, dried grains, wheat bran (with wheat screenings), gluten meal, gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt, ground barley.

North Star 20% Dairy Feed

Corn meal or hominy, soybean meal or oil meal, dried grains, ground grain screenings, wheat bran (with wheat screenings), corn gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt, beet pulp, corn gluten meal, oatmeal mill by-products.

North Star 16% Dairy Feed

Corn meal or hominy, soybean meal or oil meal, dried grains, wheat bran (with wheat screenings), corn gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt, ground grain screenings.

North Star Growing Mash

Corn meal or hominy, ground or pulverized oats, alfalfa meal, wheat midds (with wheat screenings), wheat bran (with wheat screenings), corn gluten feed, oil meal or soybean meal, calcium carbonate, meat scraps, bone meal, fish meal, salt, dried milk, with or without cod liver oil.

North Star Laying Mash

Corn meal or hominy, ground or pulverized oats, alfalfa meal, wheat midds (with wheat screenings), wheat bran (with wheat screenings), corn gluten feed, oil meal or soybean meal, calcium carbonate, meat scraps, fish meal, dried milk, salt, with or without cod liver oil.

Service Egg Mash Complete

Corn meal or hominy, ground or pulverized oats, wheat midds (with wheat screenings), wheat bran (with wheat screenings), corn gluten feed, oil meal or soybean meal, alfalfa meal, oat groats, ground barley, meat scraps, fish meal, dried milk, bone meal, calcium carbonate, salt, cod liver oil.

First National Stores, Inc.**Henfield Egg Mash**

Hominy, corn meal, wheat middlings, wheat flour middlings, wheat bran, meat scraps, corn gluten feed, pulverized oats, old process linseed oil meal, fish meal, alfalfa meal, dried butter-milk, fortified cod liver oil, steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Flory Milling Co., Inc.**Flory's Blue Seal "All-Mash" Laying Mash**

Pure corn meal, meat scrap, alfalfa leaf meal, ground white oats, fish meal, oatmeal, dried skimmilk, soybean meal, milk sugar feed or dried whey (feeding), ground barley, ground wheat, wheat bran, standard wheat middlings, crab meal, tomato pulp, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Dairy Feed

Cottonseed meal, o. p. oil meal, ground white oats, cocoanut oil meal, soybean meal, corn gluten feed, corn gluten meal, dried malt grains, alfalfa meal, wheat bran (containing screenings not exceeding mill run), standard wheat middlings, buckwheat middlings, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's 24% Special Dairy Feed

Cottonseed meal, corn gluten feed, ground white oats, corn gluten meal, wheat bran (containing screenings not exceeding mill run), cocoanut oil meal, o. p. oil meal, buckwheat middlings, malt grains, molasses, soybean meal, alfalfa meal, corn meal, standard middlings, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's 20% Special Dairy Feed

Cottonseed meal, gluten meal, gluten feed, corn meal, buckwheat middlings, alfalfa meal, ground oats, cocoanut oil meal, o. p. oil meal, molasses, malt grains, wheat bran (containing screenings not exceeding mill run), essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Growing Mash

Yellow corn meal, dried skimmilk, milk sugar feed or dried whey (feeding), choice alfalfa meal, dried tomato pulp, ground white oats, ground barley, standard wheat middlings, wheat bran, corn gluten meal, meat scrap, fish meal, crab meal, soybean meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

Flory's 32% Protein Supplement Mash

Fish meal, soybean oil meal, meat scrap, milk sugar feed or dried whey (feeding), corn gluten meal, standard wheat middlings, wheat bran, cocoanut oil meal, crab meal, alfalfa leaf meal essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

Golden Egg Laying Mash

Dried buttermilk, meat scrap, fish meal, crab meal, dried tomato pulp, soybean meal, yellow corn meal, wheat flour middlings, ground barley, wheat bran, ground white oats, choice alfalfa meal, corn gluten meal, milk sugar feed or dried whey (feeding), buckwheat middlings, coconut oil meal, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Record Dairy Feed

O. p. oil meal, cottonseed meal, soybean meal, corn gluten feed, buckwheat middlings, standard wheat middlings, corn meal, wheat bran (containing screenings not exceeding mill run), dried malt grains, ground oats, molasses, alfalfa meal, coconut oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Sunray Laying Mash

Milk sugar feed or dried whey (feeding), soybean meal, meat scrap, alfalfa meal, wheat bran, standard wheat middlings, buckwheat middlings, ground oats, ground barley, corn meal, hominy, coconut oil meal, crab meal, fish meal, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Fred A. Fountain

Fountain's Buttermilk Growing Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, table salt.

Fountain's Buttermilk Laying Mash

Dry buttermilk or dry skim milk, beef scrap, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, fish meal, table salt.

Fountain's Buttermilk Starting Feed

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, calcium carbonate, table salt.

Dean S. French

Special Mash or Poultry Feed

Wheat feed, corn meal, gluten, alfalfa meal, linseed meal, meat scraps, ground oats, charcoal, salt, cod liver oil, ground bone.

Paul Fuller & Sons

Eggmaker

Dried skim milk, soy bean meal, alfalfa leaf meal, fine ground oats, feeding oat meal, st. wheat bran, fish meal, red dog flour, meat scraps, corn meal, gluten, salt, calcium carbonate.

J. B. Garland & Son

Garland's Economy 20% Dairy Ration

Bran, middlings, hominy, meal, cottonseed meal, gluten feed, oil meal, ground barley, dried brewers grains, soybean meal, distillers grains, coconut oil meal, malt sprouts, bone meal, calcium carbonate, salt and molasses.

Garland's Economy Egg Mash

Wheat bran, middlings, corn meal, hominy, soybean meal, gluten meal, pulverized oats, dried milk, ground barley, meat scraps, ground alfalfa, bone meal, calcium carbonate, salt and cod liver oil.

Garland's Economy Growing Mash

Wheat bran, middlings, corn meal, red dog, hominy, ground barley, copra meal, soybean meal, alfalfa meal, dried milk, meat scraps, fish meal, bone meal, calcium carbonate, salt and cod liver oil.

Garland's Growing Mash

Corn meal, hominy, wheat bran, middlings, red dog flour, calf meal, pulverized oats, ground barley, alfalfa leaf meal, soybean meal, dried milk, meat scraps, fish meal, bone meal, calcium carbonate and salt, (with or without cod liver oil), (with or without molasses).

Garland's Laying Mash

Wheat bran, middlings, corn meal, gluten meal, oat meal, alfalfa, ground barley, soybean meal, meat scraps, fish meal, dried milk, bone meal, calcium carbonate and salt, (with or without cod liver oil), (with or without molasses).

Garland's 24% Ration

Wheat bran, middlings, corn meal, hominy, gluten feed, oil meal, cottonseed meal, soybean meal, coconut oil meal, ground oats, brewers grains, distillers grains, bone meal, calcium carbonate, salt and molasses.

Royal Worcester Complete Ration

Gluten feed, oil meal, ground oats, wheat bran, middlings, corn meal, cottonseed meal, soybean meal, distillers grains, beet pulp, bone meal, calcium carbonate, salt and molasses.

General Mills, Inc.

Eventually Gold Medal Chick Ration

Wheat bran, wheat standard middlings, yellow corn meal, ground oat groats, alfalfa meal, meat and bone scraps, dried skimmilk, dried buttermilk, ground limestone $2\frac{1}{4}\%$, salt $\frac{1}{2}\%$, cold liver oil extract.

Eventually Gold Medal Dairy Ration

Wheat bran, wheat standard middlings, ground oats, yellow corn meal, corn gluten feed, cottonseed meal, linseed oil meal, ground limestone $2\frac{1}{4}\%$, salt $\frac{1}{4}\%$.

Eventually Gold Medal Egg Mash

Wheat bran, wheat standard middlings, yellow corn meal, ground oats, alfalfa meal, meat and bone scraps, dried skimmilk, dried buttermilk, ground limestone $3\frac{1}{2}\%$, salt $1\frac{1}{2}\%$, cod liver oil extract.

Eventually Gold Medal Growing Mash

Wheat bran, wheat standard middlings, yellow corn meal, ground oats, alfalfa meal, meat and bone scraps, dried skimmilk, dried buttermilk, ground limestone $2\frac{1}{4}\%$, salt $\frac{3}{4}\%$, cod liver oil extract.

W. K. Gilmore & Sons, Inc.

Conference Mash

Yellow corn meal, standard wheat bran, wheat flour middlings, pure ground oats, meat scraps 50% , pure fish meal 55% , alfalfa leaf meal, milk, calcite flour, cod liver oil, dicalcium phosphate, salt.

Neponset Poultry Mash

Wheat bran, wheat middlings, corn meal, ground oats, alfalfa, beef scraps, fish scraps, linseed oil meal, corn gluten feed, ground rolled oats, calcite flour, dried skim milk, fine salt.

Goode Grain Co.

Goode Laying Mash. M.A.C. Formula.

Corn meal, wheat bran, middlings, ground oats, meat scraps, dried skim or dried buttermilk, fish meal, alfalfa leaf meal, calcium carbonate, cod liver oil.

D. H. Grandin Milling Co.

Grandin's Baby Chick Starter

Dried buttermilk, fine ground hulled oats, ground wheat, corn meal, hominy feed, wheat middlings, alfalfa leaf meal, calcium carbonate, bone meal, one-half of one percent salt and cod liver oil.

Grandin's Combined Chick and Broiler Ration

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, soybean oil, meal, alfalfa leaf meal, ground hulled oats, ground wheat, wheat bran, wheat middlings, pulverized oats, ground barley, hominy feed, yellow corn meal, calcium carbonate and salt.

Grandin's 24% Balanced Dairy Ration

Distillers dried grains, cottonseed meal, coconut oil meal, linseed oil meal, corn gluten feed, wheat bran, wheat middlings, hominy feed, steamed bone meal, calcium carbonate and salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Grandin's Sweetened 24% Dairy Feed

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten meal, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate and salt.

Grandin's Sweetened 20% Dairy Feed

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate and salt.

Grandin's Growing Mash

Dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten feed, alfalfa meal, corn meal, corn feed meal, hominy feed, pulverized oats, ground barley, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), calcium carbonate and salt.

Grandin's Laying Mash

Dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten meal, corn gluten feed, corn meal, corn feed meal, hominy feed, alfalfa meal, pulverized oats, ground barley, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), calcium carbonate and salt.

Grandin's Complete Laying Ration

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten meal, alfalfa meal, ground yellow corn, hominy feed, ground wheat, pulverized oats, ground barley, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), calcium carbonate and salt.

Grandin's Milk Maker

Dried beet pulp, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate and salt.

Grandin's Start-To-Finish Mash

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten feed, alfalfa leaf meal, yellow corn meal, hominy feed, pulverized oats, ground barley, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), calcium carbonate and salt.

Grandin's Complete Starting Ration

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, soybean oil meal, alfalfa leaf meal, ground hulled oats, hominy feed, ground yellow corn, ground wheat, pulverized oats, ground barley, wheat bran, wheat middlings, calcium carbonate and salt.

Grandin's Twin Six Dairy Feed

Cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), corn meal, corn feed meal, hominy feed, alfalfa meal, steamed bone meal, calcium carbonate and salt.

M-S (Money Saver) 24% Sweetened Dairy Feed

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten meal, corn gluten feed, distillers' corn dried grains, brewers' dried grains, wheat bran, wheat middlings, ground grain screenings from corn, wheat, oats and barley, oat mill feed (oats hull, oat shorts, oat middlings), steamed bone meal, calcium carbonate and salt.

M-S (Money Saver) 20% Sweetened Dairy Feed

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, distillers' corn dried grains, brewers' dried grains, wheat bran, wheat middlings, ground grain screenings from corn, wheat, oats and barley, oat mill feed (oat hulls, oat shorts, oat middlings), steamed bone meal, calcium carbonate and salt.

Great Atlantic & Pacific Tea Co.**Daily Growth Chick Starter**

Dried buttermilk, dried skimmed milk, meat and bone scrap, wheat flour, wheat standard middlings, ground corn, corn feed meal, ground oats, ground oat groats, old process linseed oil meal, alfalfa meal, cod liver oil, calcium carbonate from limestone 1%, salt $\frac{1}{2}$ of 1%, steamed bone meal $\frac{1}{2}$ of 1%.

Daily Egg Laying Mash Feed

Ground oats, ground barley, soybean oil meal, old process linseed oil meal, corn gluten meal, wheat standard middlings, wheat bran, alfalfa meal, corn feed meal, dried buttermilk, dried skim milk, meat and bone scrap, fish meal, flour middlings, cod liver oil, cod liver meal, calcium carbonate from limestone $2\frac{1}{2}$ %, steamed bone meal $1\frac{1}{2}$ %, salt $\frac{1}{2}$ of 1%, red iron oxide .02%, and .0015% potassium iodide.

Daily Growth Growing Mash

Meat and bone scrap, dried buttermilk, dried skimmed milk, wheat bran, alfalfa meal, wheat standard middlings, corn feed meal, ground oats, ground barley, old process linseed oil meal, corn gluten feed, cod liver oil, calcium carbonate from limestone 1%, steamed bone meal $\frac{1}{2}$ %, salt $\frac{1}{2}$ of 1%.

Milky Way Dairy Feed 24%

Corn feed meal, dried grains from barley, malt and corn, wheat bran, cottonseed meal, wheat standard middlings, ground oats, ground barley, molasses, old process linseed oil meal, corn gluten meal, corn gluten feed, calcium carbonate from limestone 1%, salt 1%, malt sprouts, soybean oil meal.

Milky Way Dairy Feed 20%

Corn feed meal, dried grains from barley, malt and corn, wheat bran, cottonseed meal, wheat standard middlings, ground oats, ground barley, molasses, soybean oil meal, old process linseed oil meal, corn gluten meal, calcium carbonate from limestone 1%, salt 1%, malt sprouts, corn gluten feed.

Great Eastern Feed Mills**"Phoenix" 24 Dairy Ration**

Soya bean oil meal, cottonseed oil meal, corn distillers grains, corn meal or hominy, flour middlings, "Wilpaco" white fishmeal, calcium carbonate, dairy salt, o. p. linseed oil meal, dried brewers grains, corn gluten feed, wheat bran, ground oats, pure cane molasses, calcium phosphate, cod liver oil.

"Phoenix" 20 Dairy Ration

Corn meal or hominy, wheat bran, flour middlings, corn gluten feed, corn distillers grains, brewers grains, soya bean oil meal, o. p. linseed oil meal, cottonseed oil meal, "Wilpaco" white fishmeal, ground oats, pure cane molasses, calcium carbonate, calcium phosphate, dairy salt, cod liver oil.

"Phoenix" 16% Growing Mash

Yellow corn meal, ground wheat, wheat bran, flour middlings, ground oats, "Wilpaco" white fishmeal, "Phoenix" crab meal, "Wilpaco" cooked meat and bone, alfalfa leaf meal, dry skim milk, salt, fortified cod liver oil.

"Phoenix" 20% Laying Mash

Yellow corn meal, wheat bran, ground oats, ground wheat, "Wilpaco" white fishmeal, "Phoenix" crab meal, "Wilpaco" cooked meat and bone, alfalfa leaf meal, soya bean oil meal, wheat flour middlings, dry skim milk, calcium carbonate, calcium phosphate, fortified cod liver oil, salt.

Sugared "Phoenix" Feed

Yellow corn meal, hominy feed, soya bean oil meal, barley meal, low grade flour, wheat middlings, oat mill feed (oat hulls, oat shorts, oat middlings), "Wilpaco" white fishmeal, pure cane molasses, calcium carbonate, calcium phosphate, dairy salt.

"Wamesit" 18% Laying Mash

Yellow corn meal, wheat bran, wheat middlings, ground oats, alfalfa leaf meal, "Wilpaco" cooked meat and bone, "Wilpaco" white fishmeal, "Phoenix" crab meal, soya bean oil meal, dry skim milk, cod liver oil, calcium carbonate, calcium phosphate, salt.

D. Harbeck**Welcome Dairy Feed**

Bran, beet pulp, cottonseed meal, corn gluten meal, ground oats, hominy or corn feed meal, oil meal, middlings, steamed bone meal 1%, salt 1%.

Welcome Growing Mash

Corn meal, bran, flour middlings, ground oats, alfalfa leaf meal, meat scraps, fish meal, dried buttermilk or skim milk, ground barley, hominy feed, oil meal, ground wheat, bone meal, shell flour, salt, cod liver oil.

Welcome Laying Mash

Corn meal, wheat bran, flour middlings, ground oats, meat scraps, fish meal, alfalfa leaf meal, dried skim milk or dried buttermilk, salt, shell flour, cod liver oil.

Welcome Starter & Broiler Ration

Corn meal, bran, flour middlings, ground oat groats or feeding oatmeal, dried skim milk or dried buttermilk, alfalfa leaf meal, meat scraps, fish meal, shell flour, salt, cod liver oil.

D. B. Hodgkins' Sons**Hodgkins' Dairy Ration**

Wheat bran, hominy, ground oats, corn gluten feed, corn meal, cottonseed meal, soy bean meal, linseed meal, beet pulp, brewers grains, molasses, calcium carbonate and salt.

Hodgkins' Milk Ration

Wheat bran, corn gluten feed, cottonseed meal, linseed meal, soy bean meal, oat feed, corn meal, hominy meal, brewers grain, beet pulp, molasses, bone meal, ground limestone and salt.

Hodgkins' Poultry

Ground corn, oats, middlings and bran (with screenings not to exceed mill run), corn gluten feed, linseed meal, ground meat scraps, calcium carbonate, dried skim milk or dried buttermilk, dairy salt, fish meal, alfalfa leaf meal and cod liver oil.

Horvitz Grain Co.**Make-M-Lay Laying Mash**

Wheat bran, corn meal, gluten feed and gluten meal, ground oats, ground barley, red dog, wheat middlings, linseed meal, meat scraps, calcium carbonate, charcoal.

Wantmore Dairy Ration

Hominy feed or corn meal, wheat bran, ground oats, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, calcium carbonate, salt.

Wantmore Dairy with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, ground oats, calcium carbonate.

Wantmore Sweetened Special Dairy 24%

Soy bean oil meal, cottonseed meal, oat meal mill by-products (oat middlings, oat shorts and oat hulls), wheat middlings, wheat bran, pure cane molasses, distillers' dried grains, corn gluten feed, calcium carbonate and dairy salt.

Wantmore Sweetened Special Dairy 20%

Soy bean oil meal, cottonseed meal, oat meal mill by-products (oat middlings, oat shorts and oat hulls), wheat middlings, wheat bran, pure cane molasses, distillers' dried grains, corn gluten feed, hominy feed, calcium carbonate and dairy salt.

Jaquith & Co.**Dairy Ration**

Wheat bran and middlings, cottonseed meal, oil meal, soya bean meal, salt, gluten feed, alfalfa, ground oats and corn, dried grains, molasses.

Growing Mash

Ground corn, wheat and oats, soy bean meal, meat and bone meal, salt, buttermilk, alfalfa meal, cod liver oil, oil meal, shell meal.

Laying Mash

Ground oats, wheat and corn, gluten feed, oil meal, meat scraps, buttermilk, soya bean meal, salt, alfalfa meal, cod liver meal.

Starting Feed

Ground corn, oats and wheat, alfalfa meal, buttermilk, salt, shell meal, fish and meat meal, cod liver oil.

Jersee Co.**Just Right Chick Starter**

Flour middlings, corn meal, wheat bran, oatmeal (feeding), dried skim milk, alfalfa leaf meal, fish meal, meat scraps, oyster shell meal, salt, calcium phosphate, cod liver oil.

Just Right Dairy Ration 24%

Old process linseed oil meal, choice cottonseed meal, choice yellow hominy, corn gluten feed, pure wheat bran, Diamond gluten meal, pure ground oats or pure crushed oats, 1% calcium phosphate, 1% salt.

Just Right Dairy Ration 16%

Old process linseed oil meal, choice cottonseed meal, choice yellow hominy, corn gluten feed, pure wheat bran, Diamond gluten meal, ground barley, pure ground oats, or crushed barley, crushed oats, 1% calcium phosphate, 1% salt.

Just Right Egg Mash

Standard middlings, standard bran, corn meal, corn gluten feed, fine ground oats, meat scraps, fish meal, calcium carbonate, limestone, alfalfa leaf meal, powdered whole and skim milk, St. John's bread, starch, milk sugar, wheat, red dog, oxide iron, di-calcium phosphate, anise, dried blood, iodized salt, yeast, cod liver oil.

Just Right Growing Mash

Powdered whole and skim milk, wheat middlings, oxide iron, calcium phosphate, corn meal, bone meal, anise, dried blood, salt, starch, St. John's bread, sugar, meat scraps, feeding oat meal, alfalfa leaf meal, fish meal, and Nopco XX cod liver oil.

Kasco Mills, Inc.

Apex Complete Grower

Corn meal, pulverized oats, ground barley, wheat bran, wheat middlings, soy bean oil meal, linseed oil meal, alfalfa meal, meat scrap, fish meal, bone meal, dried skim milk, milk sugar feed, $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil.

Apex Laying Mash

Wheat bran, wheat middlings, corn meal, linseed oil meal, soy bean oil meal, pulverized oats, ground barley, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed, $\frac{3}{4}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal.

Beatsall Milk Grains

Wheat bran, wheat middlings, linseed oil meal, corn distillers grains, corn gluten feed, corn gluten meal, cottonseed meal, soy bean oil meal, hominy feed, $\frac{3}{4}$ of 1% salt, 1% calcite, beet pulp, molasses.

"K" Laying Mash

Wheat bran, wheat middlings, corn meal, soy bean oil meal, pulverized oats, ground barley, meat scrap, bone, fish meal, $\frac{3}{4}$ of 1% salt, calcite, alfalfa meal.

Kasco All Mash Chick Food

Wheat reddog, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, dried skim milk, milk sugar feed, $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal.

Kasco All Mash Laying Food

Corn meal, pulverized oats, oat meal, wheat bran, wheat middlings, wheat reddog, linseed oil meal, soy bean oil meal, ground barley, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed, $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal.

Kasco Poultry Flushing Mash

Wheat reddog, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, milk sugar feed, $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal.

Larrowe Milling Co.

Larro — The Ready Ration for Dairy Cows

Cottonseed meal, yellow corn meal, wheat standard middlings, soybean oil meal, o. p. linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, $\frac{3}{4}$ % salt.

Larro Chick Builder

Wheat bran, yellow corn meal, wheat standard middlings, ground barley, meat and bone scraps, soybean oil meal, fish meal, alfalfa meal, dried skimmed milk, dried buttermilk, ground oats, cod liver oil extract, $2\frac{1}{2}$ % limestone, $\frac{1}{2}$ % salt.

Larro Chick Starter

Yellow corn meal, ground oats groats, wheat standard middlings, wheat bran, meat and bone scraps, dried buttermilk, dried skimmed milk, alfalfa meal, cod liver oil extract, $1\frac{3}{4}$ % limestone, $\frac{1}{2}$ % salt.

Larro Egg Mash (or Pellets)

Wheat bran, yellow corn meal, wheat standard middlings, ground barley, meat and bone scraps, soybean oil meal, fish meal, alfalfa meal, dried skimmed milk, dried buttermilk, ground oats, cod liver oil extract, $2\frac{1}{2}$ % limestone, $\frac{1}{2}$ % salt.

Larro Growing Mash

Yellow corn meal, wheat standard middlings, wheat bran, meat and bone scraps, alfalfa meal, ground oats, dried buttermilk, dried skimmed milk, soybean oil meal, cod liver oil extract, 2% limestone, $\frac{1}{2}$ % salt.

Larrowe's 16 Dairy Feed

Cottonseed meal, corn gluten feed, wheat standard middlings, o. p. linseed oil meal, yellow corn meal, dried beet pulp, wheat bran, 1% salt.

Mansfield Milling Co.

"Mansfield" Chick Growing Feed

Wheat bran, wheat middlings, corn meal, red dog flour, oatmeal, fish scraps, meat scraps, dried milk, charcoal, alfalfa meal, cod liver oil, calcium carbonate, salt, soy bean oil meal.

"Mansfield" Cow Ration

Wheat bran, wheat middlings, corn meal, gluten feed, gluten meal, ground barley, ground oats, linseed meal, cottonseed meal, salt, soy bean oil meal.

"Mansfield" Dry Poultry Mash

Wheat bran, wheat middlings, corn meal, red dog flour, gluten feed, meat scraps, dried milk, alfalfa meal, cod liver oil, calcium carbonate, salt.

Maritime Milling Co., Inc.

B B Bull Brand All Mash Laying Ration

Cod liver oil, milk sugar feed, dried buttermilk, alfalfa meal, wheat bran and wheat middlings with mill run ground screenings, ground wheat, soya bean oil meal, corn gluten meal, corn meal, pulverized oats, pulverized barley, ground oat meal, meat meal, fish meal, steamed bone meal, calcium carbonate, salt and potassium iodide.

B B Bull Brand Laying Mash

Milk sugar feed, dried buttermilk, alfalfa meal, wheat bran and wheat middlings with mill run ground screenings, soya bean oil meal, corn gluten meal, corn meal, pulverized oats, pulverized barley, ground oat meal, meat meal, fish meal, steamed bone meal, calcium carbonate, salt and potassium iodide.

Sweetened B B Bull Brand "20" Dairy Ration

Dried brewers grains, cotton seed meal, corn gluten feed, soya bean oil meal, o. p. linseed oil meal, hominy feed, corn meal, wheat bran and wheat middlings with mill run ground screenings, molasses, steamed bone meal, calcium carbonate, salt and potassium iodide.

B B Hi-Test Dairy Feed 20% Pro. Sweetened

Dried brewers grains, cotton seed meal, corn gluten feed, soya bean oil meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

B B Marmico 16% Protein Dairy Feed with Molasses

Dried brewers grains, soya bean oil meal, cotton seed meal, corn gluten feed, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

Geo. Q. Moon & Co., Inc.

U. S. 20% Dairy Ration

Corn gluten feed, cottonseed meal, coconut oil meal, bran, corn meal, corn distillers grains, rye distillers grains, oat feed, molasses, calcium carbonate, bone meal, salt, soybean oil meal, malt sprouts.

Ogden Grain Co.

24% Ograinco Milk Ration

Corn distillers' dried grains, soybean oil meal, corn gluten feed, cotton seed meal, corn meal or hominy, wheat bran, ground wheat screenings, cane molasses, salt, calcium carbonate.

Ograinco Milk Ration

Corn distillers' dried grains, corn gluten feed, soybean oil meal, cotton seed meal, corn meal or hominy, wheat bran, ground wheat screenings, cane molasses, salt, calcium carbonate, o. p. linseed oil meal.

Pilgrim All Purpose Complete Ration

Alfalfa meal, pulverized oats, meat scraps, dried skim milk, fish meal, corn meal, wheat middlings, wheat flour middlings (may contain screenings not exceeding mill run), bone meal, cod liver oil, calcium carbonate, Kelco meal.

Pilgrim Chick and Broiler Ration

Alfalfa leaf meal, fish meal, meat meal, dried skimmilk, corn meal, wheat bran, wheat middlings, gluten meal, flour middlings, pulverized oats, soya bean oil meal, cod liver oil, potassium iodide, calcium carbonate, salt, "Vitadine".

Pilgrim 16% Dairy Feed

Corn gluten feed, hominy feed or corn meal, wheat bran, dried brewer's grains, ground wheat screenings, cane molasses, calcium carbonate, salt.

Pilgrim Laying Mash

Alfalfa leaf meal, pulverized oats, meat scraps, fish meal, dried skim milk, semi-solid buttermilk, gluten meal, soybean oil meal, corn meal, wheat bran, wheat middlings, calcium carbonate, cod liver oil, Kelco meal.

Pilgrim Special Laying Mash

Alfalfa meal, pulverized oats, meat scraps, fish meal, dried skim milk, soybean oil meal, corn meal, ground wheat, wheat bran, wheat middlings (may contain mill run screenings), salt, calcium carbonate, cod liver oil.

Thrift 20% Dairy Feed

Soybean oil meal, corn gluten feed, old process linseed oil meal, gluten meal, corn meal, low fibre ground oats, cottonseed meal, standard wheat bran, standard wheat middlings, ground wheat screenings, molasses, calcium carbonate and salt.

Park & Pollard Co.

Bet-R-Milk 20% Ration

Corn distillers grains, corn gluten feed, linseed oil meal, soybean meal, cottonseed meal, malt sprouts, wheat bran, wheat middlings, hominy feed, iodol fish meal, molasses, calcium carbonate and salt.

Bidwell 24% Dairy Ration

Wheat bran, linseed oil meal, soybean meal, ground barley, malt sprouts, corn gluten meal, cottonseed meal, corn gluten feed, fine ground wheat screenings, molasses, calcium carbonate and salt.

Bidwell 20% Dairy Ration

Wheat bran, linseed oil meal, malt sprouts, gluten feed, gluten meal, soybean meal, ground barley, cottonseed meal, fine ground wheat screenings, molasses, calcium carbonate and salt.

Bidwell Dry-Mash

Dried buttermilk, alfalfa meal, corn meal, wheat bran, wheat middlings, fish meal, meat, bone, linseed oil meal, gluten meal, soybean meal, calcium carbonate, salt and ground wheat, barley, kaffir corn and buckwheat, vitamin tested cod liver oil.

Doublex 20% Dairy Ration

Linseed oil meal, gluten feed, gluten meal, soybean meal, corn distillers grains, ground barley, wheat bran, malt sprouts, cottonseed meal, fine ground wheat screenings, molasses, calcium carbonate and salt.

Growing Feed

Dried buttermilk, alfalfa leaf meal, Iodol fish meal, linseed oil meal, meat and bone meal, wheat bran, wheat middlings, calcium carbonate, salt, ground corn, wheat, oats, barley, buckwheat, vitamin tested cod liver oil.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, Iodol fish meal, meat, bone, linseed oil meal, soybean meal, wheat bran, wheat middlings, calcium carbonate, salt, ground corn, wheat, oats, barley, kafir corn, buckwheat, vitamin tested cod liver oil.

Manamar 20% Dairy Ration

Kelp, Pacific Coast fish meal and marine sea shells, corn distillers grains, linseed oil meal, soybean meal, malt sprouts, wheat bran, brewers dried grains, hominy feed, ground oats, molasses, calcium carbonate and salt.

Manamar Doublex 20% Dairy Ration

Kelp, Pacific Coast fish meal, marine sea shells, linseed oil meal, gluten feed, gluten meal, soybean meal, ground barley, corn distillers grains, wheat bran, malt sprouts, cottonseed meal, hominy, fine ground wheat screenings, molasses, calcium carbonate and salt.

Manamar Lay or Bust Mash

Kelp, Pacific Coast fish meal and marine sea shells, dried buttermilk, meat scraps, alfalfa leaf meal, pure wheat bran, wheat middlings, ground yellow corn, oats, wheat, barley, buckwheat, vitamin tested cod liver oil.

Manamar Life Cycle Mash

Kelp, Pacific Coast fish meal and marine sea shells, meat scraps, pure wheat bran, soybean meal, wheat middlings, alfalfa leaf meal, dried buttermilk, ground yellow corn, oats, wheat, barley, buckwheat, vitamin tested cod liver oil.

Manamar Top Notch 16% Dairy Ration

Kelp, Pacific Coast fish meal, marine sea shells, corn distillers grains, ground barley, malt sprouts, linseed oil meal, cottonseed meal, fine ground wheat screenings, molasses, calcium carbonate and salt.

Park & Pollard Chick Starter

Dried buttermilk, ground corn, wheat, barley, oat meal, Iodol fish meal, meat scrap, wheat bran, wheat middlings, alfalfa leaf meal, rice, calcium carbonate, salt, vitamin tested cod liver oil.

Top Notch 16% Ration

Corn distillers grains, ground barley, malt sprouts, linseed oil meal, cottonseed meal, fine ground wheat screenings, soybean meal, molasses, calcium carbonate and salt.

Yankee Dairy Ration

Corn gluten feed, cottonseed meal, wheat bran, wheat middlings, corn gluten meal, soybean meal, linseed oil meal, ground oats, corn meal, brewers grains, molasses, calcium carbonate and salt.

George H. Parker Grain Co.

Parker's Egg Mash

Yellow corn meal, wheat bran, wheat middlings, ground oats, dried skimmed milk, meat scraps, fish meal, alfalfa leaf meal, soy bean meal, edible bone meal, calcium carbonate, charcoal, vitamin tested cod liver oil and salt.

Parker's Special Dairy Ration

Wheat bran, yellow corn meal, hominy, old process linseed meal, soy bean meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, steamed bone meal and salt.

Phaneuf & Son

O Boy All Mash Starter

Fish meal, soybean oil meal, meat scrap, milk sugar feed or dried whey (feeding), corn gluten meal, standard wheat middlings, wheat bran, coconut oil meal, dried tomato pulp, crab meal, alfalfa leaf meal, ground oat meal, ground yellow corn, charcoal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

O Boy Egg Mash

Ground yellow meal and ground oats, fish meal, soybean oil meal, meat scrap, milk sugar feed or dried whey (feeding), corn gluten meal, standard wheat middlings, wheat bran, coconut oil meal, dried tomato pulp, crab meal, alfalfa leaf meal, essential minerals (calcium carbonate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

O Boy Grower

Ground yellow meal and ground oats, fish meal, soybean oil meal, meat scrap, milk sugar feed or dried whey (feeding), corn gluten meal, standard wheat middlings, wheat bran, coconut oil meal, dried tomato pulp, crab meal, alfalfa leaf meal, essential minerals (calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

W. N. Potter Grain Stores, Inc.

A.D.P. 24% Dairy Ration

Ground corn, hominy, cotton seed meal, corn gluten meal, wheat bran, ground oats, oilmeal, calcium carbonate, bone meal, and salt.

Potter's Sweetened Dairy Ration

Gluten feed, hominy, linseed oilmeal, ground oats, wheat bran, std. wheat middlings, cotton seed meal, corn distillers grains, molasses, calcium carbonate, bone meal and salt.

H. C. Puffer Co.**Egg-Em-On Growing Feed**

Corn feed meal, corn gluten feed, ground barley, feeding oatmeal, soy bean meal, wheat bran, wheat middlings, meat scraps, fish meal, dried milk, alfalfa meal, cod liver oil, salt, calcium carbonate.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings, (not exceeding mill run of screenings), corn feed meal, corn gluten feed, feeding oatmeal, soy bean meal, linseed meal, alfalfa meal, cod liver oil, small percentage salt and calcium carbonate.

Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, corn gluten meal, ground oats, corn feed meal or hominy meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Sweetened Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, soy bean meal, corn feed meal or hominy meal, wheat bran (not exceeding mill run of screenings), oat feed, molasses, small percentage salt and calcium carbonate.

Quaker Oats Co.**Big Egg Laying Mash**

Hominy feed, yellow hominy feed, wheat bran, wheat standard middlings, ground oats, soybean oil meal, meat scraps, sardine oil, dried skimmed milk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker 20% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley feed, cottonseed meal, corn gluten feed, soybean oil meal, wheat bran, wheat standard middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, 1% bone meal, molasses.

Quaker 16% Protein Dairy Ration

Hominy feed, yellow hominy feed, cottonseed meal, soybean oil meal, corn gluten feed, wheat bran, wheat standard middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, 1% bone meal, molasses, barley feed.

Quaker Ful-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat standard middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Growing Mash

Oatmeal, yellow hominy feed, wheat bran, wheat standard middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker Ful-O-Pep Station Grade Fattening Feed

Oatmeal, rolled oats, hominy feed, yellow hominy feed, wheat standard middlings, low grade wheat flour, corn germ meal, ground puffed rice, $\frac{3}{4}$ of 1% salt.

Quaker Full-O-Pep Turkey Starter

Oatmeal, ground yellow corn, yellow hominy feed, wheat bran, wheat standard middlings, corn gluten meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Ralston Purina Co.**Protina 24% Dairy Feed**

Linseed meal, soy bean oil meal, cottonseed meal, alfalfa meal, corn gluten feed, wheat middlings (standard), wheat bran, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Protina 20% Dairy Feed

Linseed meal, soy bean oil meal, cottonseed meal, corn gluten feed, wheat middlings (standard), alfalfa meal, wheat bran, ground grain screenings (from wheat, corn, oats, barley, kafir) molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Milking Cow Chow (34%)

Linseed meal, soy bean oil meal, corn gluten meal, cottonseed meal, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Milking Cow Chow (20%)

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, distillers' corn dried grains, brewers' dried grains, wheat middlings (standard), wheat bran, corn meal, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Turkey Growing & Fattening Chow

Pur-A-Tene (Carotene), meat scrap, soy bean oil meal, alfalfa meal, corn meal, wheat middlings (standard), wheat bran, $\frac{1}{2}$ % iodized salt.

D. F. Riley**Riley's Chick & Broiler Ration**

Corn meal, wheat bran, flour middlings, dried skim milk, beef scraps, oil meal, feeding oatmeal, ground limestone, alfalfa leaf meal, salt.

Riley's Growing Mash

Yellow corn meal, wheat bran, flour middlings, dried skim milk, oil meal, ground oats, ground lime stone, bone meal, cod liver oil.

Riley's Laying Mash

Wheat middlings, wheat bran, yellow corn meal, gluten feed, ground oats, beef scraps, fish meal, dried skim milk, o. p. oil meal, alfalfa leaf meal, calcium carbonate, salt, fortified cod liver oil.

Riley's 20% Ration

Gluten feed, wheat middlings, linseed oil meal, 41% cottonseed meal, wheat bran, dried brewer's grains, corn meal or hominy, bone meal, salt.

Ryther & Warren**Blue Tag Dairy Ration**

41% Cottonseed meal, o. p. linseed oil meal, corn gluten feed, white hominy (or corn meal), standard bran, standard middlings, ground oats, dried beet pulp, calcium carbonate 1%, and salt $\frac{1}{2}$ of 1%.

Minot Chick Mash, Starting and Growing Feed

Yellow corn meal, wheat bran, flour middlings, ground oat meal, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, fortified cod liver oil.

Minot Complete Laying Ration

Corn meal, wheat bran, wheat middlings, ground oats, ground barley, alfalfa leaf meal, meat scraps, fish meal, dried milk, cod liver meal, shell meal and salt.

Minot Milk Egg Mash

Yellow corn meal, wheat bran, flour middlings, ground 40-lb. oats, meat scraps 50% pro., fish meal 55% pro., alfalfa leaf meal, shell meal, dried milk, salt, fortified cod liver oil.

Minot Poultry Mash

Wheat bran, wheat middlings, red dog middlings, corn meal, gluten feed, alfalfa meal, ground oats, meat scraps, fish meal, calcium carbonate and salt.

Minot Special Dairy Ration

Wheat bran, ground oats, gluten feed, 41% cottonseed meal, hominy feed (or corn meal), dried brewers grains, oil meal, rye feed, salt and lime.

St. Albans Grain Co.**Hygrade 24 Sweetened Milk Ration**

Corn gluten meal, corn gluten feed, old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, calcium carbonate, dairy salt and pure cane molasses.

Hygrade 20 Sweetened Milk Ration with or without Fortified Cod Liver Oil

Fortified cod liver oil, old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, pure cane molasses, calcium carbonate and dairy salt.

Utility 20 Dairy Ration

Old process linseed meal, soybean oil meal, corn gluten feed, cottonseed meal, corn meal, hominy feed, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, pure cane molasses and dairy salt.

Utility 16 Dairy Ration

Old process linseed meal, corn gluten meal, corn gluten feed, choice cottonseed meal, yellow corn meal, hominy feed, ground oats, barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, pure cane molasses and dairy salt.

Wirthmore Complete Chick Starter and Broiler Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), ground oat groats, meat scraps, fish meal, alfalfa leaf meal, corn gluten meal, soybean oil meal, yellow corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore Complete Laying Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, whole oat groats, ground yellow corn, ground oats, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore 20 Dairy Feed Sweetened with or without Fortified Cod Liver Oil

Fortified cod liver oil, corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, ground barley, wheat middlings, wheat bran, edible bone meal, pure cane molasses and dairy salt.

Wirthmore 16 Dairy Ration Sweetened with or without Fortified Cod Liver Oil

Fortified cod liver oil, corn gluten meal, corn distillers' dried grains, corn gluten feed, old process linseed meal, soybean oil meal, yellow corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, cottonseed meal, calcium carbonate, pure cane molasses, steamed bone meal and dairy salt.

Wirthmore Growing Mash

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, old process linseed meal, ground wheat, oats, barley, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, wheat red dog, calcium carbonate and salt.

Wirthmore Laying Mash

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa meal, linseed meal, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, ground wheat, oats, barley, buckwheat, calcium carbonate and salt.

Wirthmore Fleshing Pellets

Dried skim milk, meat scraps, soybean oil meal, corn germ meal, feeding oatmeal, wheat bran, wheat middlings, wheat red dog flour, yellow corn meal, alfalfa meal, calcium carbonate, salt, cod liver oil, molasses.

Mrs. Annie P. Smith

Pentucket Laying Mash

Corn meal, wheat bran, wheat flour midds, feeding oat meal, 50% meat scraps, 52% fish meal, alfalfa leaf meal, edible bone meal, charcoal, calcite flour, salt.

Smith, Bodfish, Swift Co.

Paramount Laying Mash

Alfalfa meal, beef scraps 60%, bone meal, bran, calcium carbonate, hominy, corn meal, midds, cod liver oil, salt, ground oats.

C. H. Symmes & Co.

The Ideal Dairy Ration

Wheat middlings, wheat bran, brewers grains, cottonseed meal, linseed meal, gluten feed, corn meal or hominy, molasses, salt, bone meal, calcium carbonate, ground barley.

Syracuse Milling Co.

Syragold Dairy Feed

Corn meal, ground oats, wheat bran and wheat middlings with mill run screenings, toasted wheat feed (wheat and wheat bran processed), corn gluten feed, linseed meal, cottonseed meal, soy bean oil meal, distillers' dried grains, brewers' dried grains, calcium carbonate and salt.

Tloga Mills, Inc.

E-Gee Dairy Feed

Wheat bran, peanut oil meal, corn gluten feed, wheat middlings, cane molasses, salt, phosphate of lime, charcoal, potassium iodide, brewers dried grains, corn distillers grains, palm kernel oil meal, soybean oil meal, ground barley. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Protena 16% Dairy Feed (Buffalo Mill)

Linseed meal, soy bean oil meal, gluten feed, alfalfa meal, wheat middlings (standard), cottonseed meal, molasses, ground grain screenings (from wheat, corn, oats, barley, kafir), wheat bran, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Broiler Chow

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, alfalfa leaf meal, corn meal, ground oats, wheat middlings (standard), wheat bran, alfalfa meal, 1½% calcium carbonate (limestone), ½% iodized salt.

Purina Chicken Fatena

Ground oats, corn meal, ground barley, corn germ meal, wheat flour (second clear), grey wheat middlings, linseed meal, meat scrap, rolled oats, ½% iodized salt.

Purina Chick Growena

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, wheat germ, alfalfa meal, corn meal, beet pulp, grey wheat middlings, wheat bran, 1½% calcium carbonate (limestone), ½% iodized salt.

Purina Chick Startena

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, 1½% calcium carbonate (limestone), ½% iodized salt.

Purina Egg Chowder

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, wheat middlings (standard), wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Lay Chow

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, wheat middlings (standard), wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Layena (Complete Ration)

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, alfalfa meal, wheat middlings (standard), beet pulp, corn meal, ½% iodized salt, 4% calcium carbonate (limestone).

Red Brand Tloga Dairy Feed

Cocoanut oil meal, wheat bran, cottonseed meal, corn gluten feed, peanut oil meal, cane molasses, potassium iodide, salt, phosphate of lime, charcoal, soybean oil meal, brewers dried grains, corn distillers grains, palm kernel oil meal, wheat middlings. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

Tioga Laying Food

Wheat middlings, corn meal, wheat bran, pulverized oats, fish meal, soybean oil meal, corn gluten meal, meat and bone scrap, dried skim milk, phosphate of lime, linseed oil meal, hominy feed, alfalfa leaf meal, calcium carbonate, salt. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run.)

United Cooperative Farmers, Inc.**United Farmers Milk Egg Mash**

No. 2 yellow meal (Attrition), standard wheat bran, wheat flour midds, pure pulv. oats (No. 2, 38 lb. clipped — unsul.), meat scraps 50%, fish meal 55%, alfalfa leaf meal, dried buttermilk, bone meal, salt.

United Farmers Milkmaker

Choice yellow hominy, 38 lbs. ground oats, standard or pure bran, choice cottonseed 41%, oil meal pure, corn gluten feed, soya bean meal, molasses, corn distillers' grains, steamed bone meal, calcium carbonate, salt.

United Farmers Milk Pep

Cottonseed 41%, o. p. oil meal, yellow hominy, corn gluten feed, pure ground oats 38 lb., soybean meal, standard or pure bran, corn distillers' grains, bone meal, calcium carbonate, salt.

United Farmers Starting & Growing Mash

No. 2 yellow corn meal (Attrition), wheat flour middlings, standard wheat bran, ground oat groats, pure dried buttermilk, alfalfa leaf meal, steamed bone meal, pure fish meal 55%, meat scraps 50%, salt.

Unity Feeds, Inc.**Unity Complete Starting & Broiler Mash**

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, fish meal, meat scraps, ground wheat, ground barley, corn meal, ground oats, wheat bran, wheat middlings, calcium carbonate and salt.

Unity Laying Mash

Dried buttermilk, alfalfa leaf meal, soya bean meal, fish meal, meat scraps, linseed oil meal, wheat bran, wheat middlings, ground oats, ground wheat, corn meal, calcium carbonate and salt.

Arthur Ventura Grain Co.**Ventura's Dairy Feed**

Bran, midds, hominy, Diamond gluten, soya bean meal, cotton seed meal, linseed meal, beet pulp, ground oats, calcite flour, bone meal, salt, gluten feed.

Ventura's Laying Mash

Bran, midds, meal, alfalfa meal, meat scraps, fish meal, milk, ground oats, ground barley, barley flour, second clear flour, calcite, salt, cod liver oil.

Ventura's Starter & Grower

Bran, midds, meal, alfalfa meal, meat scraps, fish meal, milk, feeding oat meal, ground oats, ground barley, second clear flour, salt, calcite flour, cod liver oil, charcoal, barley flour.

C. P. Washburn Co.**Made-Right Balanced Ration**

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewers grain.

Made-Right Complete Broiler Ration

Fortified cod liver oil, dried milk, corn meal, bran, middlings, oat meal, high grade meat scraps, fish meal, ground wheat, soya bean meal, gluten, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, minerals, iron oxide, iodine.

Made-Right Complete Layer

Fortified cod liver oil, dried milk, corn meal, bran, middlings, oat meal, high grade meat scraps, fish meal, ground wheat, soya bean meal, gluten, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, minerals, iron oxide, iodine.

Made-Right 16% Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grains.

Made-Right Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, ground oat meal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dried milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

Made-Right Starting and Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, ground wheat, soya bean meal, fish meal, dried milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

Made-Right Sweet Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, linseed oil meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grains.

Wayne County Grangers Feed Corp.

Galen 24% Dairy Feed

Corn distillers grains, corn gluten feed, brewers grains, choice cottonseed meal, wheat bran, (may contain screenings), soyabean oil meal, hominy feed and cornmeal, ground oats, cane molasses, malt sprouts, steamed bonemeal, ground limestone, salt.

Superior Laying-Mash

55% meat scrap, fish meal, buttermilk, fortified cod liver oil, corn meal, ground wheat, heavy ground oats, ground barley, red dog wheat flour, wheat bran (may contain screenings), corn gluten meal, soybean oil meal, alfalfa meal, essential minerals (iodine, salt, iron sulphate, calcium carbonate and bone charcoal).

H. K. Webster Co.

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, cod liver oil.

Blue Seal College Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, 55% codfish meal, alfalfa leaf meal, dried skim milk, calcium carbonate, salt, cod liver oil.

Blue Seal "20" Dairy Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, gluten feed, choice cottonseed meal, hominy feed, wheat bran, corn distillers grains, brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, salt).

Blue Seal Egg Mash

Yellow corn meal, fine ground oats, pure wheat bran, pure wheat middlings, h. g. meat scraps, dried skim milk, alfalfa leaf meal, P. R. cane molasses, gluten meal, calcium carbonate, salt, cod liver oil.

Blue Seal Growing Mash

Dried skim milk, h. g. meat scraps, 55% fish meal, alfalfa leaf meal, gluten meal, No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground oats, ground barley, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Hom-Mix 24% Dairy Ration

Choice cottonseed meal, soy bean oil meal, malt sprouts, gluten meal, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewer's grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, salt).

Blue Seal Improved All-Mash Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, pure wheat bran, wheat flour middlings, h. g. meat scraps, 55% codfish meal, dried skim milk, alfalfa leaf meal, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Improved Balanced Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, gluten meal, choice cottonseed meal, hominy feed, wheat bran, corn distillers grains, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, salt).

Blue Seal Laying Mash

No. 2 yellow corn meal, pure wheat bran, fine ground heavy oats, h. g. meat scraps, corn gluten meal, wheat flour middlings, ground barley, ground fancy wheat, P. R. cane molasses, alfalfa leaf meal, dried skim milk, 55% codfish meal, salt, calcium carbonate, cod liver oil.

Blue Seal Special 20% Dairy Ration

Choice cottonseed meal, soy bean oil meal, malt sprouts, gluten feed, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate dicalcium phosphate, salt).

West-Nesbitt, Inc.

Pure Feed Dairy Ration

Corn gluten feed, corn distillers' dried grain, soya bean meal, wheat middlings, wheat bran, beet pulp, hominy or corn meal, choice cottonseed meal, old process linseed oil meal, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt. (Bran may contain screenings not to exceed mill run.)

Pure Feed Egg Mash

Kelp meal, corn meal, oat flour, wheat bran, wheat flour middlings, leaf alfalfa meal, dried skim milk, meat scraps, fish meal, steamed bone meal, 1% calcium carbonate, cod liver oil.

Super Pure Sweetfeed Dairy Ration

Corn gluten feed, corn distillers' dried grains, soya bean meal, choice cottonseed meal, old process linseed oil meal, wheat bran, hominy or corn meal, pure cane molasses, 1% steamed bone meal, 1% calcium carbonate, ½ of 1% salt. (Bran may contain screenings not to exceed mill run.)

Uniform Sweet Dairy Ration

Choice cottonseed meal, soya bean meal, corn gluten feed, hominy feed or corn meal, rye distillers' grains, wheat bran, oat middlings, oat shorts, oat hulls, bolted ground wheat screenings, pure cane molasses, 1% calcium carbonate and 1% salt.

Est. M. G. Williams

Williams Balanced Ration

Corn meal or hominy, linseed oil meal, cotton seed meal, ground oats, gluten feed, dried brewers grains, wheat feed, soy bean meal, calcium carbonate, and 1% salt.

Williams Chick Starter

Corn meal, bran, middlings, feeding oatmeal, fish meal, dried skim milk, leaf meal, meat scraps, calcium carbonate, salt and cod liver oil.

Williams Growing Feed

Corn meal, bran, middlings, feeding oatmeal, dried skim milk, leaf meal, meat scraps, calcium carbonate, salt, cod liver oil, and fish meal.

Williams Laying Mash

Corn meal, bran, middlings, ground oats, meat scraps, fish meal, dried skim milk, calcium carbonate, salt, cod liver oil, and leaf meal.

Stanley Wood Grain Co.

Bliss Dairy Ration

Corn meal (or hominy), cottonseed meal, wheat bran, soy bean meal, linseed meal, wheat middlings, gluten meal, gluten feed, table salt, edible bonemeal, calcium carbonate, beet pulp.

Preferred Laying Mash

Pure dried skim milk, dried fish meal, alfalfa leaf meal, beef scraps, yellow corn meal, wheat bran, soy bean meal, pulverized oats, wheat middlings, edible bonemeal, table salt, calcium carbonate.

Preferred Starting & Growing Feed

Pure dried skim milk, dried fish meal, yellow corn meal, wheat bran, wheat middlings, fine ground oatmeal, alfalfa leaf meal, beef scraps, edible bonemeal, table salt, calcium carbonate.

Woods Dairy Ration

Cottonseed meal, wheat middlings, yellow corn meal (or hominy), soy bean meal, ground oats, old process linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, salt, calcium carbonate.

Average Analyses of Unmixed By-Products.

*A considerable difference will be noted in some instances between the water content as reported in this table and similar tables in previous bulletins which show the water content of the feeds as analyzed. There is an unavoidable loss of water between the time of sampling and analysis. In this table an attempt has been made to more nearly show the water content as contained in the feeds when offered for sale by the retailer.

Oats — Test Weight per Bushel versus Chemical Composition.¹

To supply authentic information to those interested in the purchase of feed for a group of state institutions, an attempt was made during the summer of 1936 to determine the correlation between test weight per bushel and chemical analysis of whole oats. Fifty-five samples were collected from feed stores, state institutions, and grain elevators, of which thirty-three were used for purposes of comparison. The remaining twenty-two samples were discarded because they were less than 95 per cent pure and it was thought that oats containing a liberal percentage of barley and other cereals would be so affected both as to test weight and chemical composition as to be worthless for the purpose. The results for this group are presented in a separate table.

The following summary shows the average chemical analysis of the samples grouped according to weight. The most marked differences were in the fat and fiber content. No consistent difference was found in the protein, nitrogen free extract, and fat.

The oats tested were from the 1935 crop. New oats would probably show a somewhat higher water content, which to an unascertained extent might influence their test weight.

**Average Composition of Oats of Different Weights per Bushel.
95% Purity or Better.**

Weight per Bushel Pounds	Number of Samples	Water	Protein	Fat	Nitrogen Free Extract	Fiber	Ash
40 to 45 . .	6	9.18	11.44	5.70	60.83	9.19	3.66
38 to 40 . .	5	11.01	12.60	4.54	59.43	9.40	3.02

*Not clipped. A long variety.

Physical analyses of oat samples are based on one hundred gram portions which were secured by dividing and mixing large sample by means of a Boerner Sampler.

"Weed Seeds" include common types of weeds found in oats, such as wild mustard, black bindweed, quack grass, etc., but do not include wild oats.

"Inert" consists of stems, hulls and like matter, including pin oats which when tried between pinchers appear to contain no groat.

Occasional fragments of corn when found were included with the oats.

Oats, Less than 95% Purity.

**Contained about 1/2% mustard seed.

***Contained much mustard seed.

****Contained 1.18% corn.

*Not clipped. No. 16. An inferior sample. The miller termed this material as "grinding oats". No attempt was made to separate the different kinds of grain it contained, which included corn, peas and other seeds which could not have been found growing with oats in the field.

Calcium and Phosphorus Content of Commercial

Starting and Growing Mashcs.

Experimental data which have accumulated during the past decade indicate that an excess as well as a deficiency of calcium and phosphorus should be avoided in the feeding of growing chicks. The Poultry Department of the State College, who give as a reference the Cornell Poultry Nutrition School, furnish the following figures as to the amount and proper proportions of calcium and phosphorus for chick starting and growing mashcs:

Calcium	0.67%
Phosphorus	0.35-0.50%

Ratio 1.3-1.9 parts calcium to 1 part phosphorus. It is probably true that the amounts of these elements needed in a mash will depend somewhat upon the supplementary feed used. Where chicks are fed the so-called complete mash rations it should be possible to fix the amount of calcium and phosphorus consumed within narrow limits.

During the season of 1935-1936 calcium and phosphorus contents were determined on most of the chick and growing mashcs officially collected. The following table of results is published without comment for the benefit of poultrymen who may be interested.

MASSACHUSETTS
AGRICULTURAL EXPERIMENT STATION

CONTROL SERIES

BULLETIN NO. 86

NOVEMBER, 1936

Seed Inspection

By F. A. McLaughlin

This Report, the ninth in seed control service, is a record of work delegated to the Massachusetts Agricultural Experiment Station during 1936, by the Commissioner of Agriculture, who is named in the Act as Administrative Officer (Acts and Resolves of 1927, Chapter 274.)

Massachusetts State College
Amherst, Mass.

ANNOUNCEMENT

The Seed Testing Laboratory will allow ten units of work free of charge, during any calendar year, to any resident firm or citizen of Massachusetts.

Units are rated as follows:

	Units
Purity analysis (red clover, timothy, etc.).....	1
Purity analysis (bluegrass, orchard grass, etc.).....	2
Purity analysis of a mixtures of seeds (depending upon the number of kinds in the mixture).....	4-10
Examination for noxious weeds (4 oz. or fraction thereof) of samples not mixtures.....	1
Examination for noxious weeds (4 oz. or fraction thereof) of mixtures.....	4-10
Identification of seed or plant.....	1
Cleaning tobacco seed (4 oz. or fraction thereof).....	2
Germination tests (4 x 100 seeds of any seed not chaffy or requiring a purity test).....	1
Germination tests (soil, 2 x 100 seeds).....	1
Germination tests (chaffy grasses or seeds requiring purity analysis).....	2-4

Fees for work in excess of the ten free units allowed are as follows:

Germination test except for grasses other than timothy, but including clovers and alfalfa — thirty cents each.

Germination tests of grasses except timothy — fifty cents each.

Purity analyses of cereals — fifty cents each.

Purity analyses of timothy, and all other kinds of crop seeds, except grasses — seventy-five cents each.

Purity analyses of grasses and of all mixtures of not more than two kinds of agricultural seeds — one dollar each.

Purity analyses of special mixtures, including lawn grasses and pasture mixtures, a charge sufficient to cover the actual cost of working the sample, the amount of such fee depending entirely upon the character of the sample submitted for test, — minimum charge, one dollar and twenty-five cents.

In no case will the final report be rendered until all fees are paid.

SEED INSPECTION

By F. A. McLaughlin¹

This bulletin gives the results of analysis of official seed samples collected by the State Department of Agriculture, during the year 1936, from the open markets in 76 towns and cities of Massachusetts and analyzed at the Seed Testing Laboratory of the Massachusetts Agricultural Experiment Station at Amherst. Between October 1, 1935 and October 1, 1936, the Seed Laboratory analyzed 1,439 samples, of which 850 were collected by the State Department of Agriculture and 589 submitted by dealers and farmers. In addition, 203 ingredients, found in special mixtures, were given viability tests as a check on the quality of seeds in these mixtures, sampled during 1936. The total number of samples worked in the laboratory, therefore, really amounts to 1,642 without taking into account many retests made necessary by certain samples falling far below the given guarantee.

This bulletin also contains results of field tests for trueness to type of 150 lots of vegetable seeds and 104 lots of flower seeds. Comments, together with the analytical tables of the flower seeds used in field tests are also given. An increased number of samples of onion seed produced in the Connecticut Valley gave us an opportunity to investigate the methods employed in cleaning this seed and, by developing a cleaning method for the lots of onion seed submitted to the laboratory for cleaning and for viability tests, to draw certain conclusions as to the quality of this locally-produced seed. Comments and an analytical table are presented in this bulletin.

Explanation of the Tables

In these tables the seeds are listed in alphabetical order by groups, each group containing only those seeds, the sale of which is regulated by a definite section of the Massachusetts Seed Law. Section 261-A of the Acts and Resolves of 1927, Chapter 274, defines the group from Alfalfa to Timothy, inclusive; Section 261-B, Mixtures; Section 261-C, Special Mixtures; and Section 261-D, Vegetables.

The number preceding each analysis is for identification and reference. The line to the right of the letter "L" gives information copied from the label; that to the right of "F", what was found in the laboratory analysis. Attention is called to certain irregularities by the following:

The asterisk (*) shows violation in labeling.

Boldface type indicates low purity, low germination, excessive weed seed, noxious weeds not declared, or excessive inert material, depending upon the column in which it is found.

Other deficiencies are enumerated as follows:

- (1) Noxious weeds found.
- (2) Old seed (as shown by given date or by correspondence with the wholesaler).
- (3) Ingredient found, but not declared.
- (4) Ingredient declared, but not found.
- (5) Ingredient declared, but percentage found after adding proper tolerance is less than 5%.
- (6) Term not specific.

¹Assisted by Miss Olive M. Hoefle, Technical Assistant

The letter "R" after the germination percentage in the table of vegetable seeds indicates that the sample has received one or more retests.

All lots of seed included in this report were tested according to the Rules for Seed Testing adopted by the Association of Official Seed Analysts.

"Tolerance" is applied to both purity and germination, except in those tables which list seeds falling under sections of the law not requiring purity or germination on the label. For the application of "Purity Tolerance", the sample is considered as made up of two component parts: (1) the component being considered, and (2) the balance of the sample. The tolerance in percentage allowed for each component shall be two-tenths of one per cent (0.2%) plus twenty per cent (20%) of the lesser of the two parts. "Germination Tolerance" has been applied between a given germination and the result of the germination test as follows:

<i>Given Germination</i>	<i>Allowable Variation (%)</i>
90 or over.....	6
80 or over, but less than 90.....	7
70 or over, but less than 80.....	8
60 or over, but less than 70.....	9
Less than 60.....	10

Type and Variety Studies of Vegetables

Conducted in Conjunction with the Department of Vegetable Gardening
Professor Grant B. Snyder

A large majority of home gardeners buy their vegetable seeds from the neighborhood store. The commercial grower may also buy from this source if he runs short or has forgotten to order a certain crop from his regular seedsman. These various stores and shops in the neighborhood community are, therefore, important sources of garden seeds.

Seeds, with most of these stores, are a side line. The person selling them has little or no knowledge of what is being sold other than the information printed on the packet and the price. The conditions under which the seed is stored and displayed are too frequently very poor, resulting in poor germination when planted in the garden. Most of the varieties sold are standard sorts. Newer improved varieties are generally not listed.

It has been found that in a fair percentage of cases, seed purchased from these sources has been variable in germination and in trueness to name. In order to definitely check the performance of packet and bulk seed sold by these merchants, the Department of Vegetable Gardening has cooperated with the Seed Laboratory in making germination tests and in checking the trueness to name of samples purchased on the open market by state inspectors.

Some 150 lots of seed were included in the field trials. These consist of beans, beets, carrots, lettuce, onions, parsnips, radishes, spinach, squash and turnips.

Field notes on germination indicated fairly good vitality of practically all lots.

The various lots were mostly within the type range for the variety specified on the seed package. One source, however, (Lake Shore Seed Company of Dunkirk, N. Y.) was very poor, for practically all lots included in the trials showing marked variation in type and maturity as well as disease susceptibility.

Results of the field trials are qualified as being "satisfactory" when true to the name of variety on the seed packet; "fair" when only a small percentage of variation from the type occurs, or when the type is poor for the name on the packet; and "poor" where a wide variation from the type of the variety given on the packet occurs, extreme variation of growth exists, or mosaic disease carried by the seed severely reduces yield or value of the crop.

Quality of Onion Seed Produced in the Connecticut Valley, Season of 1935

From time to time, small amounts of onion seed have been grown by onion farmers in the Connecticut Valley. In general, however, the amounts produced have been less than a hundred pounds per grower and for personal use rather than for a market commodity.

High price for seed grown in 1934 to be planted in 1935 led farmers to produce more home-grown seed in 1935 than heretofore.

Locally-produced onion seed, tested at the Massachusetts Experiment Station Laboratory for germination, has never been of better than average quality, with much of it so low in viability as to be of questionable value. Such information as could be secured from the farmers who send in locally-produced onion seed, led to the inference that low viability is often due to incorrect methods of harvesting, drying, and cleaning the seed.

The common method of cleaning seed on the farm is to thresh by beating quantities of the seed capsules, contained in three-quarter-filled grain bags. Coarse stems and fragments of the fruit are then removed by screens, and the finer impurities and light seed separated by winnowing. The seed with the remaining impurities is then plunged into tubs containing water, stirred to remove air and, when the heavy seed have settled to the bottom, the lighter seed and floating impurities are skimmed off or removed by decanting. The remaining pure seed is then dried by various means before storing or planting. In general, this method is similar to that employed by the commercial grower, except that in onion-seed producing areas the climate favors thorough drying of the seed spread out, after floating, on canvas exposed to the air and sunshine.

The ten lots of seed received were threshed by rubbing between two sheets of corrugated rubber matting. The threshed material was then screened to remove dust and finer particles of plant substance, and the remainder cleaned in a Eureka Sample Testing Separator. This machine is a combination of screens and air blast, removing unthreshed seed and delivering a heavy grade of cleaned seed, which is here designated No. 1, as well as a lighter grade containing some of the heavier impurities. This lighter grade was again run through the machine submitting it to a heavier air blast than No. 1. This resulted in Grades No. 2 and No. 3. Usually the No. 3 grade contained impurities which could be removed by again running through the machine with a still heavier air blast. In a few instances, it was possible to break the seed down into 1, 2 and 3 grades or more, by this process. In several instances, only a grade No. 2 or 3 remained as pure cleaned seed — although in one instance five grades were procured. In several instances, the last grade separated contained impurities which could only be removed by floating the product in buckets of water. In these instances, the light seed and debris were thus removed and the remaining portion dried for several hours in screened-bottom metal trays over steam radiators. Samples of seed from each of the various grades derived from each lot of seed, according to this method of separation, were submitted to a laboratory test for viability.

Since our various grades of seed are really determined on the basis of weight, Grade 1 is made up of the heaviest seed in the sample, and progressively each succeeding grade is made up of lighter seed. It is interesting to note that in most instances, the heavier seed in any particular lot show the highest viability and the lowest grade oftentimes a viability so low as to throw considerable doubt upon the practicability of using this grade in production. As cleaned

by the farmer by his home methods of plunging the entire lot of seed into water and skimming off the floating seed and debris, the resulting product would naturally contain many seed of low or no viability. This would reduce the average of any lot, depending upon the proportions of lower grade seed contained, to a viability which might be only average and oftentimes below a test which is considered desirable for the lot of seed as a whole.

A much larger local production of onion seed during the summer of 1936 in the Connecticut Valley will give us an opportunity to test and clean a greater volume of onion seed during the winter of 1937. During this time it is hoped to continue this experiment on a much larger scale. There is evidence, based on the cleaning and tests of 1936, that with proper cultural and cleaning methods a very good quality of onion seed can be obtained under local conditions, assuming that proper culture and harvesting have also been employed.

The following table shows the weight of uncleaned seed for each of the ten lots, the total weight of the cleaned seed, and the weight and viability of each grade secured by repeated machine separations.

Lot No.	Weight of Seed		Grade No. 1		Grade No. 2		Grade No. 3		Grade No. 4	
	Before Cleaning Lb.	Clean Seed Lb.	Weight Lb.	Germination Percent						
*1	43.9	21.8	3.6	89	7.8	86	2.2	85	2.6	73
2	40.1	19.1	7.2	83	6.1	83	4.0	83	1.8	56
3	18.1	7.2	5.9	78	1.3	68				
4	6.6	4.0	1.6	82	.8	80	.7	65	.9	44
5	15.5	7.2	3.0	84	3.2	82	1.0	54		
6	14.0	4.7	3.0	81	.9	77	.8	55		
7	7.6	5.2	1.5	70	1.9	67	1.4	60	.4	43
8	59.2	14.3	3.0	78	4.3	78	3.7	68	3.3	30
9	3.3	2.5	.8	35	.9	33	.6	33	.2	18
10	28.2	10.5	1.1	81	2.3	75	3.6	67	3.5	30

*This lot contained also 2.6 pounds of Grade No. 5, which gave a germination test of 59 percent.

Studies of Flower Seeds

Conducted by the Seed Laboratory in Cooperation with the Department of Floriculture
Olive M. Hoefle and Professor Clark L. Thayer

At present many home flower growers purchase their flower seeds from local stores of various kinds. The Seed Laboratory and the Department of Floriculture have cooperated this past summer in an effort to determine the quality of seed sold by such dealers. The seeds were collected on the open market by State Seed Inspectors, weighed and analyzed for purity in the laboratory, and tested for germination and trueness-to-type under field conditions. Seeds of 104 lots (7 bulk and 97 packets) were gathered, comprising a goodly number of the common flowers grown in small home gardens. Thirteen different seed firms or wholesalers were represented and thirty-eight different kinds of flower seeds, as follows:

Acroclinium.....	1	Larkspur.....	2
Ageratum.....	3	Lobelia.....	2
Alyssum.....	2	Lupines.....	2
China Asters.....	2	Marigolds.....	11
Bachelor's Buttons.....	8	Morning Glories.....	5
Brachycome.....	1	Nasturtiums.....	3
Calendula.....	7	Pansies.....	1
Candytuft.....	6	Petunia.....	4
Carnations and Pinks.....	3	Poppies.....	3
Cockscomb.....	2	Portulaca.....	2
Coreopsis.....	2	Salvia.....	1
Cosmos.....	2	Scabiosa.....	1
Didiscus.....	1	Snapdragon.....	2
Dimorphotheca.....	1	Sunflowers.....	1
Eschscholtzia.....	1	Sweet Peas.....	3
Forget-me-nots.....	2	Sweet Sultan.....	1
Four o'clocks.....	1	Verbena.....	2
Kochia.....	1	Zinnias.....	12
Total.....			104

Most of the packets bore the common name of the flower, while a very few seedsmen added both the scientific and common names. Some listed the color, while others gave no indication as to what color might be expected, although several were marked "mixed." It was noted that the better wholesalers gave much of the desired information, stating the price as well as the approximate germination, the scientific and common names, and some description of the plant.

The entire contents of each packet, or in the case of bulk lots the entire sample drawn, were weighed and analyzed for purity. Wherever possible, the Weed Seeds and Other Crop Seeds were identified and recorded. (See Table 1.)

The amount of seed found in any one packet or lot varied from less than one gram (.3 gr.) to 48.0 grams. The price varied from five cents a packet to as high as twenty-five cents. There appeared to be little relation between the price and the quantity of seed. With Marigold (Guinea Gold) for instance, the quantity varied from .3 to 3.4 grams and the price ranged from ten to twenty-five cents. One wholesaler offered .3 gram, while another offered .8 gram of the same variety, both for ten cents a packet.

Mechanical Purity

In an effort to obtain definite information as to the extent to which flower seeds, particularly those sold in sealed paper packets, carried impurities, a careful examination was made of each lot. Purity results will be found in Table 2.

Of the 104 lots of flower seeds, three or 2.88% were free of any impurities whatever. To state it in another way: 101 lots, or 97.12%, contained impurities in the form of Weed Seeds, Other Crop Seeds, seeds of plants other than the one in question, or Inert Materials consisting of fine chaff, dust, stems, floral parts, grit, or pieces of earth.

The purity percentage was found to vary from 81.70 in the case of Ageratum to 100.00 in the case of some of the Morning Glories and Sweet Peas.

Weed Seeds

Weed seeds were found in 46 of the lots, or 44.23%. One packet of Bachelor Buttons contained .97% Weed Seeds, while a packet of Verbena contained .8%. A packet of Ageratum contained a total of 38 weeds (.60% by weight), representing 9 different genera, including 17 individual seeds of Crab Grass, which is classed as a noxious weed in many states. These, however, were the extreme cases, as some were found to be entirely free of weed seeds.

Inert Matter

Of the 104 lots, a total of 99, or 95.19%, contained Inert Matter of one kind or another. Ageratum carried the highest percentage, probably due to the fact that the impurities were of the same general size and weight as the seed itself. One packet contained 17.42% of such materials. The presence or absence of impurities may be due in some cases to the ease with which the seeds can be cleaned. Thus Ageratum might be expected to contain a high percentage of Inert, since much of the Inert Material is of the same shape and weight as the seed itself.

Other Crop Seed

Many of the packets contained seeds of flowers other than the kind under consideration, as well as seeds of field crops. Thirty-nine, or 37.50%, contained seeds of other crop plants. One packet of Ageratum ranked high in Other Crop Seed content with 2.74%. A packet of Kochia contained 28 crop seeds, representing 7 genera; a packet of Marigold contained 11 crop seeds, representing 10 genera; while another lot of Ageratum was found to have seeds of 11 different genera, with a total of 24 seeds.

The Weed Seeds and Other Crop Seeds found in the various packets may be accounted for in several different ways. Since some of the "extra" seeds were kinds that are not generally found growing with flower seeds in the fields, it appears either that they were placed there intentionally or that they entered through the repacketing process or through careless harvesting and handling methods. This may also be true of the Inert Matter found.

Germination

No germination tests were made in the laboratory on any of the lots collected, since many of the packets contained too small a quantity of seed for both field and laboratory tests. After the purity tests were completed, the samples were turned over to Professor Clark L. Thayer of the Department of Floriculture, who conducted tests in the field to determine the actual quality and to check the trueness-to-name.

Field Tests

The field tests show that in the majority of samples germination was satisfactory. However, in seven cases the seed failed to germinate and in a few cases germination was extremely poor. Due to the late date of planting, certain seeds, such as sweet peas, did not give good results.

As far as possible trueness-to-type or variety was determined, but since many lots were described as mixtures or did not carry varietal names, a wide range in color and form was permissible.

It will be noted that comparatively few of the novelties and named varieties

of recent introduction were included in the trials.

When the number of seeds permitted, rows thirty linear feet long were sown. Germination was rated as "good" if the seeds germinated in approximately two-thirds of the row; "fair", between one-third and two-thirds; and "poor" for one-third or less. Performance was designated as "satisfactory" if the varieties were true-to-name, producing only a low percentage of plants which were not true-to-form or color (one-third or less); "fair", between one-third and two-thirds not true, and "unsatisfactory", if less than one-third was true to name.

BULLETIN No. 87

DECEMBER, 1936

Inspection of Agricultural
Lime Products

By H. D. Haskins

This is the twenty-fifth report on the inspection of agricultural lime products in Massachusetts. It gives the composition of the various products which have been sold in the State during the year. In case of the ground limestone products the mechanical analysis is also given.

Massachusetts State College
Amherst, Mass.

INSPECTION OF AGRICULTURAL LIME PRODUCTS FOR THE SEASON OF 1936

By H. D. Haskins, Official Chemist¹

Manufacturers and Brands

During 1936, 23 firms registered for sale in Massachusetts 50 brands of lime products, advertised and sold for neutralizing acid soils, one brand of gypsum or land plaster, and one brand of agricultural talc. The products are grouped as follows:

Hydrated or slaked lime	27
Ground limestone	21
Oyster shell lime	1
Lime ashes	1
	—
Total	50
Gypsum	1
Talc	1

All of the lime products registered in Massachusetts during the year were sampled and analyzed and the results appear in this bulletin. Most of the samples were secured by the same agents who drew the samples for the fertilizer inspection and were taken from all parts of the State during a ten weeks' period following April 1. The samples numbered 124, representing 53 brands, and were drawn from stock in the possession of 97 agents or owners. There were 57 analyses made.

One product not registered in the State during 1936 has been included in the analyses: Gibsonburg Hi Lime, manufactured by the Gibsonburg Lime Products Co., Gibsonburg, Ohio. This material was found on sale at the S. S. Kresge Company's store in Boston. When informed that registration was necessary, the product was withdrawn from sale by the manufacturer. It had been sold only in small packages for general use and only a few packages had been disposed of.

Variations and Deficiencies in the Composition of Lime Products.

No attempt has been made in the tables of analyses to segregate the high calcium from the high magnesium products. Both high calcium and high magnesium materials are found among the limestones as well as among the hydrated limes and are effective as neutralizing agents when applied to soil. The cost of the high magnesium products is usually about the same as for the high calcium products. The former has the higher neutralizing value and of course supplies magnesium in available form, this being of considerable importance when used on soils deficient in available magnesia.

About 79 per cent of the lime products analyzed showed no deficiencies. In case of the ground unburned products (limestone and shell lime) which showed deficiencies, with one exception the low test was accompanied by a sufficient

¹Assisted by H. Robert DeRose, Albert F. Spelman, Assistant Chemists, James T. Howard, C. L. Whiting and G. E. Taylor, Sampling Agents.

overrun in the other ingredient (calcium or magnesium according to the deficiency) so that there was no decrease in neutralizing value. The exception was Monarque Agricultural Dolomite, manufactured by Clifford L. Miller. This product was found deficient .91 per cent in calcium oxide and .74 per cent in magnesium oxide, or a net deficiency of 1.94 per cent in calcium oxide equivalent.

Several of the unburned lime products should be more finely ground to become as effective as is the hydrated product when used in amounts to furnish the equivalent of calcium and magnesium oxides. The following products would be more effective in neutralizing soil acidity if more finely ground. The finer grinding of unburned lime products means a greater surface exposed to chemical action in the soil, with a corresponding increase in availability.

Magnesium Limestone, American Agricultural Chemical Co.

Ground Limestone, Hazen Brothers.

Hoosac Agricultural Limestone, Hoosac Valley Lime Co., Inc.

Monarque Agricultural Dolomite, Clifford L. Miller.

Monarque Agricultural Limestone, Clifford L. Miller.

Sealshtp Oyster Shell Lime, Producers Sales Co.

Ashley White Dolomite Agricultural Limestone, D. U. Smith & Brother.

Solvay Pulverized Limestone, Solvay Process Co.

What has been said with reference to deficiencies in the unburned lime products applies also to the hydrated limes. Although calcium oxide deficiencies were noted in seven brands, yet all of these were accompanied by sufficient overruns in magnesium oxide so that the net value of the products was not impaired. One brand, Gibsonburg Hi Lime, manufactured by Gibsonburg Lime Products Co., showed a deficiency of .69 per cent calcium oxide and .52 per cent magnesium oxide or a net deficiency of 1.55 per cent in calcium oxide equivalent.

Explanation of Tables of Analyses

Table I, "Proportion of total oxides as carbonates." The data furnished in this column are calculated from an actual determination of carbon dioxide (CO_2). Calcium or magnesium not in the form of carbonate is present either as hydrated lime (water- or air-slaked), burned lime (caustic or unslaked), or as basic silicate. All of the products listed in this table have at some time been burned, and the proportion of oxides present as carbonates indicates to what extent the product has absorbed carbonic acid from the air.

Table II, "Carbonates of calcium and magnesium." The calculation in this column allows for the small amounts of calcium and magnesium combined as basic silicates; these are readily soluble in mineral acid solutions but obviously should not be classed as carbonates.

Under "Mechanical analysis" the figures represent in round numbers the percentage of product that would pass the various meshed sieves mentioned.

Tables I and II. "Neutralizing value expressed in terms of calcium oxide" represents the acid neutralizing value of both the magnesium and the calcium. The figures in the "per cent" column are obtained by a direct titration with standard acid. The "pounds in one ton" are secured by multiplying the figures in the "per cent" column by 20.

"Insoluble matter" represents material which is insoluble in dilute hydrochloric acid to which a few drops of nitric acid has been added.

The figures in parenthesis following the brand name show the number of samples collected and analyzed.

Howard's Agricultural Talc

Registered by L. A. Howard Talc Co., Inc., Proctorsville, Vermont.

This material was analyzed at this laboratory in considerable detail late in 1935. The results of this analysis are given herewith as it furnishes a better picture of the actual composition and behavior of the material than does a later analysis of a sample secured by our inspector in 1936 which was simply analyzed for its content of acid soluble calcium and magnesium oxides in order to check the acid soluble magnesium oxide which was guaranteed under registration.

Analysis in 1935
Per Cent.

By fusion:

Magnesium oxide	32.64
Calcium oxide	1.24
Iron and aluminum oxides	9.12
Insoluble siliceous material	41.05

By dilute 1-1 hydrochloric acid:

Magnesium oxide	13.87
Calcium oxide	1.19
Iron and aluminum oxides	5.21
Insoluble matter	64.72
Volatile matter (largely carbon dioxide)	15.02

In order to test the solubility of the magnesium contained in the talc, various solvents were used and the recovery of magnesium oxide is given as follows:

Magnesium Oxide
Recovered
Per Cent.

½ Gram boiled with 150 cc. distilled water made slightly acid with hydrochloric acid + 15 cc. of saturated solution of ammonium oxalate	5.58
1 Gram boiled 5 minutes with 100 cc. of 1% hydrochloric acid	8.87
1 Gram boiled with 100 cc. of 1% hydrochloric acid + 5 grams of ammonium chloride	13.13
1 Gram boiled with 200 cc. of 2% citric acid solution	5.52

The product was used in a trial experiment on a farm in Leverett, Mass., on soil with a pH of 4.8, showing the characteristic chlorosis accompanying magnesia deficiency. The crops were potatoes, corn and oats. The application of 400 to 600 pounds per acre prevented the chlorosis.

The analysis of the sample drawn in the spring of 1936, strong hydrochloric acid being used as the solvent, gave the following results:

	<i>Found</i> <i>Per Cent.</i>	<i>Guaranteed</i> <i>Per Cent.</i>
Magnesium oxide	20.96	13.00
Calcium oxide	1.80	
Iron and aluminum oxides	8.40	
Insoluble material	44.76	

Tests made at this laboratory on other samples show the presence of considerable carbon dioxide, indicating that the product is not a true talc (silicate of magnesia) but rather a mixture of talc and magnesite (carbonate of magnesia).

Lime Definitions

The following definitions of lime products used in agriculture were made official by vote of the Association of Official Agricultural Chemists at their annual meeting in December 1936. It is hoped that so far as possible the branding of lime products used in agriculture will be made to conform to these definitions. This office will be glad to cooperate with any manufacturer in advising with reference to necessary changes in order to conform to these definitions.

1. **Air-slaked lime.** A product composed of variant proportions of the oxide, hydroxide and carbonate of calcium, or calcium and magnesium, and derived from exposure of quicklime.

2. **Pulverized limestone, (fine-ground limestone)** is the product obtained by grinding either calcareous or dolomitic limestone so that all of the material will pass a 20-mesh sieve and at least seventy-five (75%) per cent will pass a 100-mesh sieve.

3. **Ground limestone, (coarse-ground limestone)** is the product obtained by grinding either calcareous or dolomitic limestone so that all of the material will pass a 10-mesh sieve, and at least fifty per cent (50%) will pass a 100-mesh sieve.

4. **Ground shells** is the product obtained by grinding the shells of mollusks so that not less than fifty per cent (50%) shall pass a 100-mesh sieve. The product shall also carry the name of the mollusk from which said product is made.

5. **Ground shell marl** is the product obtained by grinding natural deposits of shell marl so that at least seventy-five per cent (75%) shall pass a 100-mesh sieve.

CONTROL SERIES

BULLETIN No. 88

JUNE, 1937

Seventeenth Annual Report on
Eradication of Pullorum Disease
in Massachusetts

By the Poultry Disease Control Laboratory

This bulletin reports the results of pullorum-disease testing for the 1936-37 season. The results show that pullorum disease eradication is steadily progressing in Massachusetts. Marked increases in the number of tested flocks, tested birds and tested samples were observed for the season. It is encouraging to note that in spite of the large increases, the average percentage of positive tests was nearly as low as that of the previous season. Poultrymen and others interested in the industry are urged to cooperate to the fullest extent in applying sound measures that will further the eradication of the disease, as well as to employ methods which maintain flocks free from the disease.

MASSACHUSETTS STATE COLLEGE

AMHERST, MASS.

SEVENTEENTH ANNUAL REPORT ON PULLORUM DISEASE ERADICATION IN MASSACHUSETTS

1936-1937

By the Poultry Disease Control Laboratory¹

Introduction

The main purpose of pullorum-disease testing in Massachusetts is to identify flocks free from pullorum infection. In certain instances the test is employed as a means of eradicating the disease from flocks, especially in those flocks which warrant the expenditure for intensive retesting. However, the testing of birds is one important phase in the program for the establishment and maintenance of pullorum-clean flocks. This fact is clearly illustrated in the past season's results which show further progress in the elimination of the disease from Massachusetts flocks.

Several factors have contributed to the progress in pullorum-disease elimination, but one deserving of special mention is the fact that the majority of flock owners have experienced the advantages of a pullorum-clean flock as contrasted with the disadvantage of an infected flock. They have come to realize the value of annual testing and also the importance of preventing the disease from entering their flocks. The small number of re-infected flocks encountered annually would suggest that few poultrymen fail in their efforts to maintain a pullorum-clean flock.

Knowing that the majority of Massachusetts poultrymen recognize the value of pullorum-clean flocks and that it requires a sound eradication and prevention program to establish and maintain such flocks, the industry may entertain the fullest hope that the disease will be further eliminated from within the State.

Summary of Service Rendered

Applications received	322
Applications cancelled.....	15
Flocks tested.....	311*
Number of tests	463,095
Chickens:—	
Routine.....	460,167
Experimental.....	1,595
Fowl other than chickens:—	
Routine.....	684
Experimental.....	649**
Owners receiving necropsy service.....	26
Necropsies of reacting birds	65

* Includes four flocks of poultry other than chickens.

** Includes 488 paratyphoid tests.

¹ Poultry Disease Control Laboratory Staff: H. Van Roekel, Chief of Laboratory; K. L. Bullis, Assistant Veterinary Pathologist; O. S. Flint, Assistant Research Professor; Miriam K. Clarke, Research Assistant; Felicia Jewett, Laboratory Assistant. Appreciation is extended to Dr. J. B. Lentz, Head of the Department of Veterinary Science, for the administrative assistance given to the testing work.

Distribution of Tests and Reactors

Table 1 gives the number of tests and reactors for each breed and each county. Twelve counties received testing service during the season. A total of 461,762 samples was tested, which is the largest number during any one season of the 17-year period. Norfolk, Worcester, and Middlesex Counties led in the number of tested samples.

The average percentage of positive tests for the State was 0.37, which is slightly higher than the previous season. This percentage was markedly increased by one flock which yielded 690 reactors. Two counties, Barnstable and Dukes, had no positive tests among the samples tested. All other counties except one had less than 1 percent positive tests.

The predominating breed tested was the Rhode Island Red, which revealed a smaller percentage of positive tests than all other breeds combined.

Of the total number of samples tested, 419,377 were from females and 42,385 from males. Of these 0.38 and 0.34 percent, respectively, were positive.

Pullorum Disease Yields to Annual Testing

Less than 10 years ago annual testing was regarded as unnecessary, even in cases where flocks had revealed no reactors in the test of the previous season. At the present time the prevailing understanding among poultrymen in Massachusetts is that annual testing is an essential part of their husbandry program for the year, whether or not they think their flocks are free from the disease. Such an attitude on the part of the flock owner has brought about great progress in the establishment and maintenance of pullorum-clean flocks in Massachusetts. This fact is supported by data in Table 2. This table shows that 162 flocks, representing 326,435 birds and 334,366 tests, had been tested for three or more consecutive years. Of the total birds tested 72.7 percent were in the group which had been tested for three or more consecutive years. The percentage of positive tests for this group was 0.08, which is the lowest attained in the 17-year testing period. Furthermore, an increase of 63,035 birds over the previous season has been observed.

TABLE 2. ANNUAL TESTING VERSUS SINGLE AND INTERMITTENT TESTING

Classification	Flocks	Birds	Total Tests	Positive Tests		Negative Flocks		Positive Flocks	
				Number	Percent	100% Tested	Partially Tested	100% Tested	Partially Tested
Tested for the first time.....	67	48,461	50,605	430	0.85	43	14	7	3
Intermittent testing.....	36	33,671	33,671	732	2.17	24	7	2	3
Two consecutive years.....	42	39,952	43,120	314	0.73	32	4	4	2
Three or more consecutive years..	162	326,435	334,366	255	0.08	134	23	2	3
Totals.....	307	448,519	461,762	1,731	0.37	233	48	15	11

Among the other groups increases in the number of flocks and tested birds over the previous season have also been noted. The percentages of positive tests for the groups tested for the first time and tested intermittently are greater than those in the remaining groups. This is as one might expect, although the percentage of positive tests in the group tested for the first time is far less than that of the previous season. This fact is encouraging, since it gives the flock owners in this group a greater incentive to continue testing and employing measures to establish and maintain a clean flock.

A total of 281 non-reacting flocks were detected, of which 48 were tested partially. Among 281 non-reacting flocks, 157 (55.8 percent) were in the group tested for three or more consecutive years.

Twenty-six positive flocks are listed in Table 2. The group tested for the first time leads in the number of positive flocks.

Fifty-nine flocks, representing 19.2 percent of the total flocks, were partially tested. However, it is encouraging to note that the percentage of flock owners who tested all the birds on the premises has increased from 79.3 in 1935-36 to 80.7 in 1936-37. Partial flock testing, although apparently successful in some cases, as a general rule fails to determine the true status of the flock and sooner or later brings grief to the owner. The testing of all birds on the premises enables one to determine the true status of the entire flock and eliminates the necessity for quarantine measures that should be practiced in a partially tested flock. A flock once free from the disease does not necessarily continue without pullorum infection.

In discussing the data in Table 2, one may conclude that pullorum-disease eradication has made the greatest progress in flocks that are subjected to annual testing and sound eradication and preventive measures. It is hoped that further progress can be made by reducing or eliminating the number of partially tested flocks.

Appearance of Infection in Flocks Previously Negative

In a disease eradication program the subject of infection re-appearing in previously non-reacting flocks is one of great concern to the poultry industry. According to present knowledge regarding the transmission of the disease, pullorum infection may be disseminated through numerous channels. Knowing that scattered foci of infection still exist within the State as well as out of State, dissemination of the disease to previously non-reacting flocks may be expected if proper preventive measures are not exercised.

In Table 3 are listed six flocks that were non-reacting in 1935-36 but revealed infection in 1936-37. It is of interest to note that in all cases but one the reactors did not exceed 0.50 percent. The source of infection could not be satisfactorily explained in four flocks. Flock 3 revealed infection the previous season and was retested by the pen method. It is quite possible that this method of testing failed to detect all of the infection which manifested itself in the progeny the following season. The safest retesting procedure for infected flocks is to retest all birds in the flock, which permits one to determine the true status of each individual bird. The owner of Flock 4 returned a pen of birds from an egg-laying contest and when these were tested one infected bird was detected. This incident points out, as have previous cases of a similar nature, that birds returned from egg-laying contests or shows may be infected with diseases foreign to the flock from which they originated. Therefore, one should not jeopardize the health standing of a flock by carelessly or

unthinkingly returning such birds without determining their health status. Some breeders follow the preferred policy of not returning such birds to the flock, in order to avoid the possibility of introducing diseases into the flock. In Flock 5 the explanation for infection might be the introduction of males from an unknown source. However, it is questionable whether or not infected males could bring about 11.65 percent infection in a flock. It is likely that some other factors also were operative in bringing about infection.

While the percentage (2.94) of "breaks" may appear small, it nevertheless constitutes a problem to the poultry industry. This is especially true as long as poultrymen are willing to tolerate the existence of scattered foci of infection within the State, to permit the importation of infected stock, and to neglect to carry out effective preventive measures against the introduction of the disease into the flock.

TABLE 3. APPEARANCE OF INFECTION IN FLOCKS PREVIOUSLY NEGATIVE

* Represents retests.

** Reactors the previous season but cleaned up infection by retesting.

Non-Reacting and Positive Flocks Classified by Counties

Table 4 shows that during the 1936-37 testing season, 281 non-reacting flocks, representing 424,431 birds, were detected. The number of birds in the non-reacting flocks represented 94.6 percent of the total birds tested. The number of 100 percent tested, non-reacting flocks was 233. The number of birds in these flocks, representing 84.4 percent of the total tested, was 378,563. Norfolk, Middlesex and Worcester Counties have the largest number of birds in non-reacting flocks.

Twenty-six flocks, representing 24,088 birds, were classified as infected. Only 5.4 percent of the total birds tested were in positive flocks.

The data in Table 4 show that Massachusetts is constantly progressing in establishing and maintaining pullorum-clean flocks. The industry should recognize its pullorum-disease-free flocks and utilize these sources to a greater

extent to replace infected flocks or establish new clean flocks. Pullorum disease eradication can be greatly enhanced through a far-reaching, effective educational program which is sponsored by all the various agencies within the industry. The values derived from pullorum disease eradication reach out into every phase of the industry; hence cooperative effort by all agencies means a stronger attack on the enemy.

Comparison of 1935-36 and 1936-37 Seasons

The results of the 1935-36 and 1936-37 testing seasons are compared in Table 5. Increases are noted in tested flocks (55), tested birds (118,860), tests (117,681) and non-reacting flocks (51). The percentage of positive tests increased slightly from 0.30 to 0.37.

Pullorum Disease in Turkeys

During the past few years an increasing number of cases of pullorum infection in turkeys has come to our attention. Along with the expansion in turkey production by means of artificial methods which are similar to or have something in common with those used for hatching and raising chicks, pullorum-disease outbreaks have also increased in number. Such outbreaks of pullorum infection among turkeys in Massachusetts have in all cases occurred in young poults. In most cases the origin of the infection could be traced to an incubator or brooder house which was or had been occupied by pullorum-infected chicks. Spontaneous cases of pullorum infection traceable to adult turkey breeding stock have not been observed.

Turkey raisers who carry on their own hatching and brooding operations should exercise every possible precaution against introducing pullorum infection through these channels. Turkey eggs should not be incubated on the same premises where eggs or stock that harbor the infection are found. Young poults are readily susceptible to the disease, which behaves similarly to that in young chicks. The poults which survive the outbreak may remain "carriers" of the infection. These "carriers" exhibit an apparently normal physical condition, but on necropsy *S. pullorum*, causative organism of the disease, may be recovered.

During the 1936-37 testing season, the breeders in one turkey flock were tested for pullorum disease. Pullorum infection had been discovered in this group of birds when they were young poults, and limited evidence suggested that the infection originated at a custom hatchery. The breeders were tested at approximately six months of age. The following is a brief summary of the testing results.

Date of Test	No. of Turkeys Tested	Percent Reactors	Remarks
11/10/36	118	28.81	Bacteriological cultures were taken from eight birds of which three yielded <i>S. pullorum</i> .
12/ 8/36	83*	0.00	
1/13/37	82	0.00	Sera of two birds exhibited a very weak reaction in the dilutions of 1:10 and 1:25.
3/26/37	77	0.00	

* Four samples were unsatisfactory for the agglutination test.

Among the 118 birds tested, 28.81 percent exhibited reactions which varied in degree, with a maximum titre of 1:320. The sera of the majority of the reactors completely agglutinated *S. pullorum* antigen in the 1:25 dilution.

Although it was impossible to obtain all the reacting birds for further study and necropsy, the owner cooperated in making it possible to examine a few of the reacting birds which had been dressed for the holiday trade. Cultures were taken from eight birds and *S. pullorum* was isolated from three. In one case the organism was recovered only from the peritoneum. The agglutination titres of definitely known infected birds indicate that a low diagnostic dilution is essential in detecting "carriers" of the disease.

Results of subsequent tests point out that the initial test was effective in eliminating the infected birds from the flock. No evidence of pullorum infection has been obtained in progeny raised from the tested breeders. The progeny of the tested stock will be subjected to the agglutination test in the fall to determine their status concerning pullorum disease.

In summation it may be stated that pullorum disease in turkeys is an insignificant problem providing the stock (eggs and poults) is not exposed to sources of infection. Eggs should not be incubated at custom hatcheries which select eggs from stock (chickens or other fowl) that is not officially recognized as being free from pullorum disease. In case valuable breeding lines are infected with the disease the infection may be eliminated through intensive testing of the young mature birds. A low diagnostic dilution appears most effective in detecting the infected individuals.

Comments and Suggestions

During the past 17 years of pullorum-disease testing, marked progress has been made in the establishment and maintenance of pullorum-clean flocks. However, if one considers that only about one-sixth of the Massachusetts poultry population was tested during the 1936-37 season, it appears that further progress can be made in establishing additional pullorum-clean flocks. It seems appropriate to mention a few salient factors that may greatly expedite the eradication program for Massachusetts.

The practice of partial flock testing has been discussed elsewhere in this bulletin. In official testing this practice does not receive recognition even in flocks that have had a previous non-reacting test. Partial flock testing does not determine the true status of the entire flock. While the tested portion of the flock may not reveal reactors, one is unable to state that no infection exists in the untested portion. With part of the flock to be regarded as an unknown quantity as far as pullorum infection is concerned, such a flock should be considered unsafe for breeding since it may contain infection and lead to serious trouble. This fact has been experienced in routine testing.

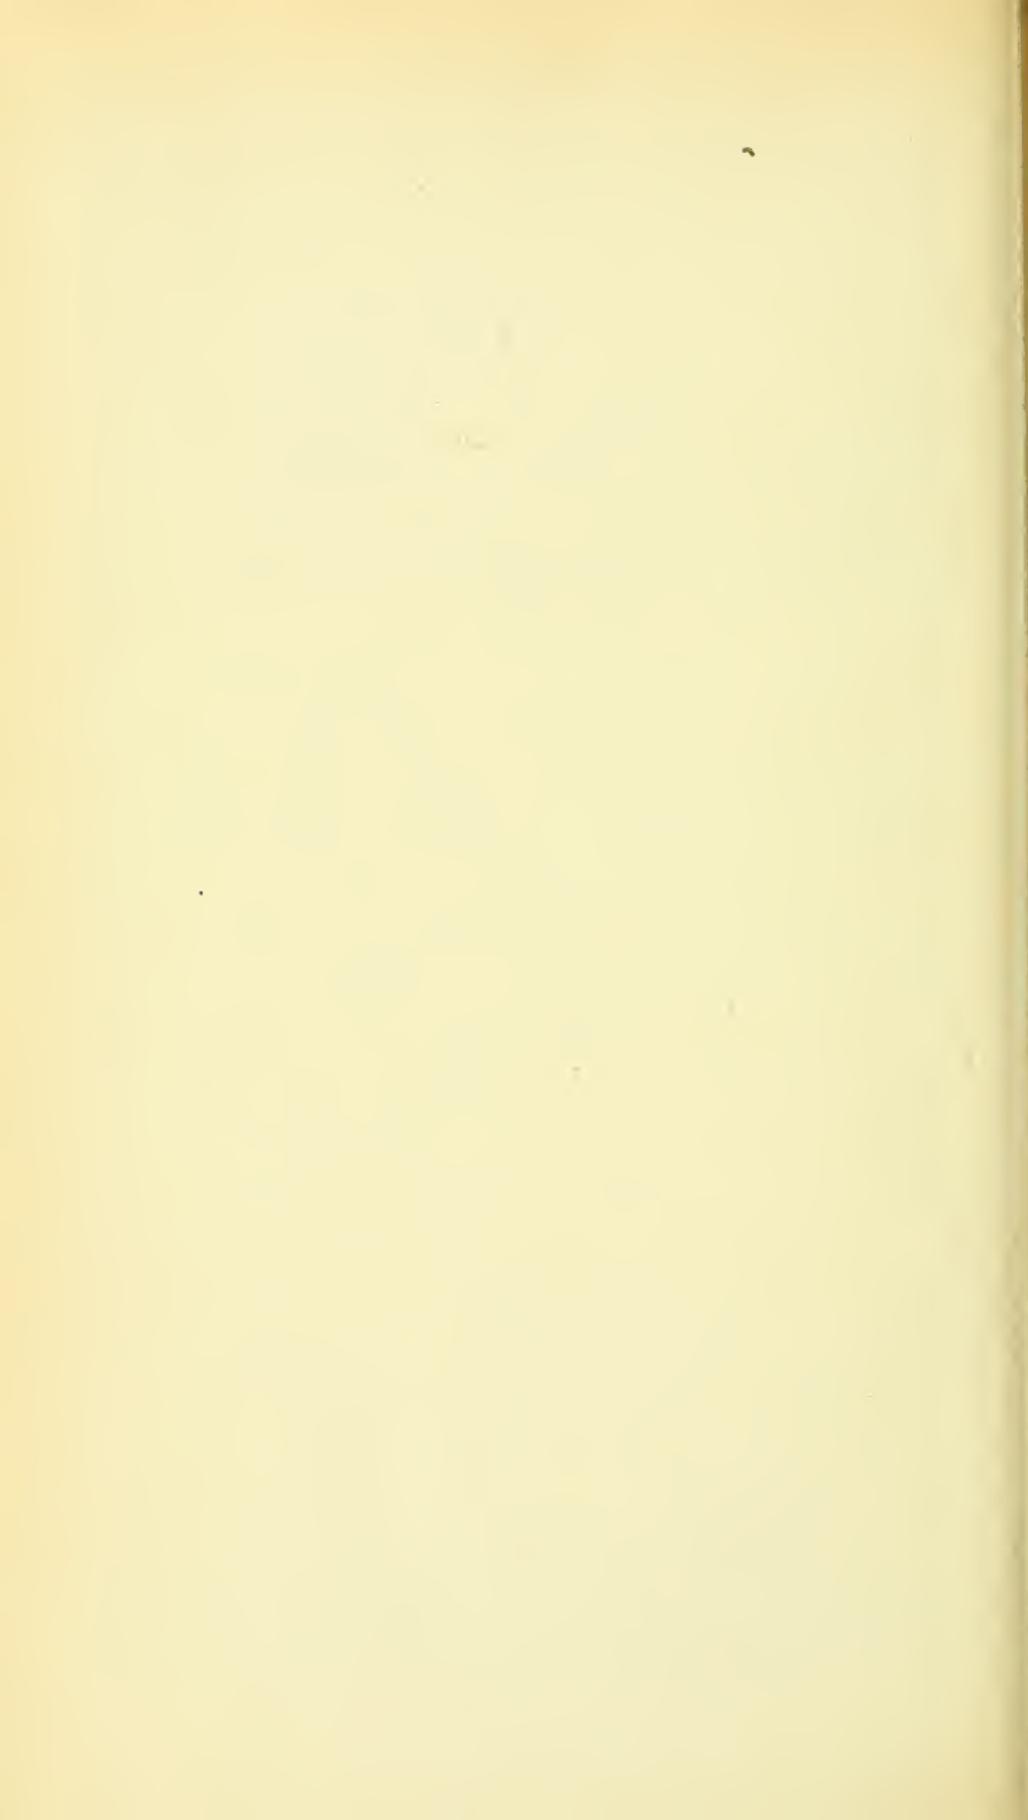

Since a number of poultrymen enter birds in contests and shows, it seems important to mention the dangers associated with returning such birds to the premises. On several occasions pullorum-disease "breaks" in pullorum-free flocks have been due to infected birds being returned from contests. The introduction of infection through this channel may be readily prevented by one of two plans: either not returning the birds to the flock, which is also preferable from the standpoint of other diseases; or holding the birds in rigid quarantine and subjecting them to the agglutination test immediately upon their return, and again within 30 days after the first test. The contest birds are usually returned in early fall, and since testing facilities are available at that time, this does not excuse one from not applying the test. The flock owner should look upon these measures as a safeguard to his flock.

In view of the fact that the testing work has increased considerably during the 1936-37 season, and the outlook may indicate possible further increases, the poultrymen are asked to cooperate with the laboratory in every way possible so that the policy of rendering high-quality service may be carried out. During the past two years the bulk of the testing work has been conducted during November and December. If flock owners are in a position to have their flocks tested during October or earlier, this will greatly relieve the congestion during November and December. Furthermore, weather conditions are more favorable for the collection of samples during the early fall months, which makes possible a more satisfactory and economical service.

Flock owners who know definitely that pullorum infection exists in their flocks should consider carefully the possible advantage of having their flocks tested. If such an owner is not in a position to eliminate the infection through

retesting, it would be inadvisable to expend funds for testing. It would be expedient not to test, but to introduce new stock from an officially recognized pullorum-clean source during the approaching hatching season. It is suggested that the problem of eradicating the disease from the premises be discussed with the laboratory or your local County Agent before testing work is undertaken.

The Massachusetts Department of Agriculture, State House, Boston, Mass., has established two official grades of pullorum-tested flocks. Owners of flocks that can meet the requirements of these grades can apply for official recognition by communicating with the Department of Agriculture. During the latter part and at the close of the testing season the Department of Agriculture publishes lists of names of flock owners whose flocks have qualified for the different grades. These official lists are sent upon request both within and without the State. One of the purposes of these official lists is to aid the buying public in identifying flocks that are free from pullorum infection. Official testing agencies in different states resort to these lists in approving importations of stock from Massachusetts. Owners of tested flocks are advised to communicate with the Massachusetts Department of Agriculture concerning official grades for pullorum-tested flocks.

Control Series

Bulletin No. 89

November, 1937

Inspection of Commercial
Feedstuffs

By Philip H. Smith

This is the forty-third report of feeding stuffs inspection and presents the results of analysis of 1,791 samples of feeding stuffs intended for livestock and poultry consumption, collected during the year ending September 1, 1937.

MASSACHUSETTS STATE COLLEGE
AMHERST, MASS.

INSPECTION OF COMMERCIAL FEEDSTUFFS

By Philip H. Smith¹

During the past year 1,124 brands of feed have been registered for sale by 216 manufacturers and dealers; 1,791 samples of feeding stuffs have been collected and subjected to analysis; 158 dealers, located in 96 towns, have been visited by the feed inspector at least once.

It is to be doubted if a clear understanding of the relation of Feedstuff Control to the purchaser of commercial feeds always exists. The statute sets up definite requirements in relation to a guarantee which must be attached to every lot or parcel of feed offered for sale. The principal duty of the feed control official is to prove whether or not the guarantee conforms to the content of the sack to which it is attached. Past experience has shown that at least 95 percent of the feeding stuffs offered for sale in the Massachusetts markets conform to guarantee. Deficiencies in the remaining 5 percent are in most instances so slight as not to warrant prosecution. About all that Control Service can do is to present in tabulated form the results of inspection and in cases of flagrant violation to prosecute the violators. The fact that a feeding stuff carries and conforms to its guarantee does not prove that it is suitable for the use of every feeder. A careful perusal of the guarantee should be the initial step in the purchase of a feed. The law does not prevent the use of any material having food value, no matter how slight, so long as it is not actually injurious to the animal or fowl fed. From the list of guaranteed ingredients note carefully the presence of screenings or other low grade milling offals; also if material is present which supposedly carries essential vitamins and mineral ingredients. There have been on the market certain feeds made of high grade oil cakes brought down to a 20 percent protein level by low grade milling offal which in certain instances have sold for as much as \$10 a ton less than the average of better feeds of the same protein level — a doubtful bargain. These feeds conform to the feeding stuffs act in every way, even to stating the ingredients used. This information is there for the use of the purchaser. Why not use it?

The requirements of feeding stuffs acts have not kept pace with scientific progress in the practice of feeding. Guarantees do, however, require the presentation of basic information of value to the purchaser in forming an intelligent opinion of the value of a commercial feed for his particular needs.

¹The following staff members assisted in the inspection: Albert F. Spelman and John W. Kuzmeski chemists; Frederick A. McLaughlin, microscopist; James T. Howard, inspector; Cora B. Grover, clerk.

Certified Ingredients

Allied Mills, Inc.

Empire Egg Mash

Dried buttermilk, dried skim milk, meat scraps, fish meal, soybean oil meal, choice alfalfa meal, wheat bran, wheat standard middlings, corn gluten feed, corn meal, fine ground oats, 1% ground limestone and 1% salt.

Empire Growing Mash

Corn meal, wheat bran, soybean oil meal, fine ground oats, meat scraps, fish meal, wheat standard middlings, choice alfalfa meal, corn gluten feed, dried skim milk, dried buttermilk, 1% salt and 1% ground limestone.

Wayne-Amco 24% Dairy Ration

Cottonseed meal, corn gluten meal, corn distillers' dried grains, brewers' dried grains, corn gluten feed, old process linseed oil meal, soybean oil meal, peanut oil meal, ground oats, corn meal and hominy meal, wheat bran, cane molasses, 0.5% steamed bone meal, 1.5% ground limestone, 1.0% salt, 0.03% iron oxide, 0.0005% potassium iodide.

Wayne-Amco 20% Dairy Ration

Cottonseed meal, brewers' dried grains, corn distillers' dried grains, ground oats, corn gluten feed, corn meal and hominy meal, soybean oil meal, corn gluten meal, old process linseed oil meal, wheat bran, cane molasses, 0.5% steamed bone meal, 1.5% ground limestone, 1.0% salt, 0.03% iron oxide and 0.0005% potassium iodide.

Wayne-Amco 16% Dairy Ration

Corn distillers' dried grains, cottonseed meal, brewers' dried grains, corn gluten feed, old process linseed oil meal, corn meal, hominy meal, soybean oil meal, ground oats, wheat bran, cane molasses, 0.5% steamed bone meal, 1.0% ground limestone, 1.0% salt, 0.03% iron oxide, and 0.0005% potassium iodide.

Wayne Broiler Ration

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, ground yellow corn, fine ground oats, wheat standard middlings, wheat bran, soybean oil meal, choice alfalfa meal, 1.5% ground limestone, 0.04% iron oxide, 0.0005% potassium iodide, 0.25% salt and sardine oil.

Wayne Chick Starter

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Egg & Breeder Mash

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, wheat bran, corn meal, fine ground oat meal, corn gluten feed, choice alfalfa meal, soybean oil meal, fine ground oats, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Growing Mash

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Growing Mash with Sardine Oil

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oat meal, fine ground oats, choice alfalfa meal, soybean oil meal, wheat bran, 1.5% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Mash Concentrate

Dried buttermilk, dried skim milk, liver meal, fish meal, peanut oil meal, meat scraps, soybean oil meal, corn gluten meal, corn gluten feed, choice alfalfa meal, 4% ground limestone, 0.15% iron oxide, 0.002% potassium iodide and 0.5% salt.

Wayne Poultry Fattener

Ground yellow corn, corn germ oil meal, white hominy feed, rolled oats, oat flour, fine ground oats, wheat standard middlings, wheat red dog, old process linseed oil meal and 1% salt.

Wayne Turkey Growing Mash

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oats, choice alfalfa meal, soybean oil meal, corn gluten meal, wheat bran, 1% charcoal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide and 0.25% salt.

Wayne Turkey Growing Mash with Sardine Oil

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, fine ground oats, choice alfalfa meal, soybean oil meal, corn gluten meal, wheat bran, 1% charcoal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

Wayne Turkey Starting Mash

Dried buttermilk, dried skim milk, liver meal, meat scraps, fish meal, wheat standard middlings, corn meal, choice alfalfa meal, soybean oil meal, wheat bran, fine ground oats, 1% charcoal, 2% ground limestone, 0.06% iron oxide, 0.0007% potassium iodide, 0.25% salt and sardine oil.

A. P. Ames Co.

Ames Complete Cycle Ration

Corn meal, wheat middlings, wheat bran, fish meal, meat scraps, pulverized whole oats, dried milk, alfalfa leaf meal, calcium carbonate, salt, Clo-Trate concentrated cod liver oil.

Ames Complete Starter and Broiler Ration

Corn meal, wheat middlings, dried skim milk, pulverized whole oats, wheat bran, alfalfa leaf meal, cod fish meal, meat scraps, calcium carbonate, salt, Clo-Trate concentrated cod liver oil.

Ames Egg Mash

Corn meal, wheat middlings, pulverized whole oats, wheat bran, cod fish meal, meat scraps, alfalfa leaf meal, dried skim milk, calcium carbonate, salt, Nopec XX concentrated cod liver oil.

Ames 20% Milk Maker

Gluten, corn meal (and, or hominy), wheat bran, wheat middlings, linseed meal (and, or soy bean oil meal, and, or cotton seed meal), oat feed, calcium carbonate, bone meal, and salt.

Arcady Farms Milling Co.

Arcady 20% Open Formula Production Ration

Wheat bran, hominy feed, o. p. linseed oil meal, ground white oats, corn gluten feed, cottonseed meal, corn gluten meal, molasses, 1% bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady 24% Open Formula Production Ration

Wheat bran, hominy feed, o. p. linseed oil meal, ground oats, corn gluten feed, cottonseed meal, corn gluten meal, molasses, 1% bone meal, 1% calcium carbonate from limestone, 1% salt.

Arcady-Wonder Complete All Mash Chick Starter

Wonderlas (molasses, peanut oil meal, soy bean oil meal, o. p. linseed oil meal, corn oil cake meal), animal liver meal, fish meal, meat scraps, corn meal, wheat middlings, ground oats, ground oat groats, dehydrated alfalfa leaf meal, dried buttermilk, fortified cod liver oil, steamed bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt, $\frac{3}{4}$ oz. potassium iodide per ton.

Arcady-Wonder Growing Mash

Wonderlas (molasses, peanut oil meal, soy bean oil meal, o. p. linseed oil meal, corn oil cake meal), animal liver meal, fish meal, meat scraps, dried buttermilk, corn gluten feed, corn meal, wheat bran, wheat middlings, dehydrated alfalfa meal, fortified cod liver oil, ground oats, bone meal, 1% calcium carbonate from limestone, $\frac{1}{2}$ of 1% salt, $1\frac{1}{2}$ oz. potassium iodide per ton.

Arcady Wonderlas for Poultry

Molasses, peanut oil meal, corn oil cake meal, o. p. linseed oil meal, soy bean oil meal, 2% calcium carbonate from limestone, 2% salt.

W. E. Atkinson Co.

Weaco Dry Mash

Corn meal, bran, middlings, ground oats, meat scraps, gluten feed, dried skim milk, alfalfa leaf meal, fish meal, calcium carbonate, salt, cod liver oil.

Barber & Bennett, Inc.

Big Ben Brand 20% Dairy Feed

Corn gluten feed, soybean oil meal, wheat bran, corn & rye distillers' grains, ground barley, babassu oil meal, ground screenings from wheat, corn & oats, cane molasses, calcium carbonate from limestone, steamed bone meal, 1% salt, potassium iodide, not less than .0017% iodine.

Beacon Milling Co., Inc.

Auburn Dairy Feed

Corn gluten feed, old process linseed oil meal, soy bean oil meal, ground oats, corn meal, ground grain screenings, cottonseed meal, wheat bran, ground barley, brewer's dried grains, corn distiller's dried grains, molasses, 1% salt, 2% calcium carbonate.

Beacon Sweet "24"

Old process linseed oil meal, soy bean oil meal, corn gluten meal, cottonseed meal, corn gluten feed, corn meal, brewer's dried grains, corn distiller's dried grains, wheat bran, wheat middlings, ground oats, ground barley, molasses, 1% salt, 2% calcium carbonate.

Beacon Sweet "20"

Old process linseed oil meal, soy bean oil meal, corn distiller's dried grains, cottonseed meal, wheat bran, wheat middlings, brewer's dried grains, corn gluten meal, corn gluten feed, ground barley, corn meal, ground oats, molasses, 2% calcium carbonate, 1% salt.

Beacon Battery Laying Ration

Dried skimmilk, dried buttermilk, fish meal, meat scrap, dehydrated alfalfa leaf meal, pulverized heavy oats, pulverized heavy barley, wheat bran, wheat flour middlings, corn meal, fine charcoal, $\frac{1}{2}$ % fine salt, fortified cod liver oil, 2% calcium carbonate.

Beacon CC Pellets

Dried skimmilk, ground yellow corn, liquid petrolatum, sulphur sublimatum, pulverized heavy barley, wheat bran, fortified cod liver oil, $\frac{1}{2}$ % salt.

Beacon Complete Starting Ration

Dried skimmilk, meat scrap, fish meal, ground yellow corn, ground hulled oats, pulverized heavy oats, pulverized heavy barley, wheat bran, wheat red dog flour, dehydrated alfalfa leaf meal, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{2}$ % salt.

Beacon Dairy Ration

Old process linseed oil meal, soy bean oil meal, corn gluten feed, corn distiller's dried grains, ground barley, corn gluten meal, hominy feed, corn meal, cottonseed meal, ground oats, wheat bran, wheat middlings, 2% calcium carbonate, 1% salt.

Beacon Duck Breeders Fitting Ration

Wheat bran, corn meal, wheat low grade flour, pulverized oats, pulverized barley, alfalfa leaf meal, fish meal, meat scrap, $\frac{1}{4}$ % salt, 1% calcium carbonate, $\frac{1}{2}$ % calcium phosphate.

Beacon Duck Breeder Pellets

Dried skimmilk, meat scrap, fish meal, corn meal, pulverized heavy barley, wheat bran, wheat red dog flour, ground oat groats, dehydrated alfalfa leaf meal, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Duck Fattening Pellets

Meat scrap, corn meal, pulverized heavy barley, pulverized heavy oats, wheat bran, wheat middlings, wheat red dog, dehydrated alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Duck Growing Pellets

Meat scrap, fish meal, corn meal, pulverized heavy barley, pulverized heavy oats, wheat bran, wheat red dog, dehydrated alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Duck Laying Pellets

Dried skimmilk, meat scrap, fish meal, corn meal, pulverized heavy barley, pulverized heavy oats, wheat bran, wheat red dog, dehydrated alfalfa leaf meal, old process linseed oil meal, soy bean oil meal, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Duck Starting Pellets

Dried skimmilk, meat scrap, fish meal, wheat bran, wheat red dog, corn meal, pulverized heavy barley, ground oat groats, dehydrated alfalfa leaf meal, soy bean oil meal, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{4}$ % salt.

Beacon Egg Mash

Dried buttermilk, dried skimmilk, meat scrap, fish meal, pulverized heavy barley, pulverized heavy oats, corn meal, dehydrated alfalfa leaf meal, wheat bran, wheat flour middlings, fortified cod liver oil, 3% calcium carbonate, $\frac{1}{2}$ % fine salt, 1% Protozyme (an enzyme supplying product derived from biochemically processed cereals).

Beacon Fleshing Pellets

Dried skimmilk, pulverized heavy oats, pulverized heavy barley, wheat low grade flour, corn meal, corn oil meal, wheat germ meal, fortified cod liver oil, 2 $\frac{1}{2}$ % calcium carbonate, 1% salt.

Beacon Growing Mash

Dried skimmilk, meat scrap, fish meal, pulverized heavy oats, pulverized heavy barley, corn meal, wheat red dog flour, dehydrated alfalfa leaf meal, wheat bran, wheat flour middlings, fortified cod liver oil, 2% calcium carbonate, $\frac{1}{2}$ % salt.

Beacon's Cayuga Laying Mash

Dried buttermilk, dried skimmilk, fish meal, meat scrap, corn meal, dehydrated alfalfa leaf meal, wheat bran, wheat flour middlings, pulverized heavy barley, pulverized heavy oats, fortified cod liver oil, 3% calcium carbonate, $\frac{1}{2}$ % salt.

Berkshire Coal & Grain Co.**Berkshire Hills Sweet Dairy Feed**

Wheat bran, cottonseed meal, corn gluten feed, linseed oil meal, corn meal, ground oats, brewers grains, calcium carbonate, cane molasses and salt.

Green Mountain Laying Mash

Wheat bran, wheat middlings, linseed oil meal, corn meal, fine ground oats, alfalfa meal, meat scraps, bone meal, fish meal, dried skim milk, calcium carbonate, salt, Nopco XX cod liver oil.

Borden Grain Co.**Borden's Dairy Feed**

Wheat bran, wheat middlings, corn meal or hominy, gluten meal, gluten feed, cottonseed meal, soy bean oil meal, linseed oil meal, calcium carbonate, bone meal, salt.

Borden's Laying Mash

Corn meal, wheat bran, wheat middlings, ground oat meal, dried milk, alfalfa leaf meal, fish meal, meat scrap, soy bean oil meal, cod liver oil, calcium carbonate, salt.

Geo. B. Brown Corp.**Brown's Dairy Feed**

Wheat bran, hominy feed, oat feed, cottonseed meal, calcite flour, distillers grains, corn meal, o. p. linseed meal, corn gluten feed, molasses, bone meal, salt.

Brown's Egg Mash

Corn meal, wheat bran, wheat midds, ground oats, meat scraps, fish scraps, dried milk, alfalfa leaf meal, charcoal, calcite flour, salt, and Nopco XX cod liver oil.

Community Feed Stores, Inc.**Community Chick Mash**

Yellow corn meal or hominy, feeding oat meal, wheat bran, wheat middlings, red dog middlings, alfalfa meal, dried milk, choice meat scraps, fish meal, precipitated bone meal, calcium carbonate, cod liver meal, cod liver oil, salt.

Community 20 Dairy Ration

Corn distillers dried grains, 41% cotton seed meal, soya bean meal, corn gluten feed, yellow corn meal or hominy, pure ground oats, wheat bran, molasses, salt, calcium carbonate.

Community Growing Mash

Yellow corn meal or hominy, pure ground oats, wheat bran, wheat middlings, alfalfa meal, soya bean meal, dried milk, choice meat scraps, pure fish meal, oyster shell meal, salt, cod liver oil.

Community Laying Mash

Yellow corn meal or hominy, pure ground oats, wheat bran, gluten, wheat middlings, choice meat scraps, soya bean meal, dried milk, alfalfa meal, salt, calcium carbonate, oyster shell meal, cod liver oil.

Hilltop 20 Dairy Ration

41% cotton seed meal, soya bean meal, corn gluten feed, hominy or corn meal, Vim oat mill feed, wheat bran, corn distillers dried grains, cane molasses, calcium carbonate, salt.

Nicolas Courcy Grain Co.**Courcy Eastern Laying Mash**

Meal, wheat bran, ground oats, 45% beef scrap, standard middlings, ground wheat, leaf meal alfalfa, fish meal, milk, calcite flour, shell meal, salt, cod liver oil.

Cover & Palm Co.**C & P Growing Mash**

Dried milk, meat scraps, fish meal, pulverized oats, corn meal, wheat bran, wheat middlings, alfalfa leaf meal, soy bean meal, Vitadine, hominy feed, salt, bone meal, potassium iodide, calcium carbonate, cod liver oil.

C & P Grade A Laying Mash

Dried milk, meat scraps, fish meal, corn meal, wheat bran, wheat middlings, pulverized oats, soy bean meal, alfalfa leaf meal, linseed meal, Vitadine, salt, calcium carbonate, potassium iodide, cod liver oil.

C & P Starter & Broiler Ration

Dried milk, meat scraps, fish meal, ground hulled oats, soy bean meal, corn meal, wheat bran, wheat red dog flour, wheat middlings, pulverized oats, Vitadine, alfalfa leaf meal, salt, bone meal, potassium iodide, calcium carbonate, cod liver oil.

Curley Brothers**Crystal Complete Growing Feed**

Ground corn, ground wheat, bran, middlings, oatmeal, oat groats, linseed oil meal, alfalfa leaf meal, meat meal, fish meal, dried skim milk, bone meal, calcium carbonate, salt, cod liver oil concentrates.

Crystal Complete Laying Mash

Ground barley, ground corn, ground wheat, oat groats, bran, middlings, alfalfa leaf meal, linseed oil meal, meat meal, fish meal, dried skim milk, calcium carbonate, bone meal, salt, cod liver oil concentrates.

Crystal 24% Dairy Ration

Corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, distillers grains, hominy feed, ground barley, ground oats, bran and middlings with mill run of screenings, edible bone meal, salt, calcium carbonate.

Crystal Egg Mash

Linseed oil meal, yellow hominy feed, yellow corn meal, bran and middlings with mill run of screenings, feeding oat meal, red dog, alfalfa poultry greens, beef scraps, fish scraps, steamed bone meal, dried skim milk, salt, calcium carbonate.

Crystal Growing Mash

Cod liver oil, dried skim milk, meat scraps, white fish meal, steamed edible bone meal, alfalfa poultry greens, red dog flour, bran and middlings with mill run of screenings, feeding oat meal, yellow hominy feed, yellow corn meal, calcium carbonate, salt, linseed oil meal.

Delaware Mills, Inc.**Delaware All Mash Chick Starter**

Cod liver oil, dried skim milk, meat scrap, fish meal, oatmeal, alfalfa leaf meal, corn meal, wheat bran, wheat middlings, wheat reddog flour, bone meal, phosphatic calcium carbonate, charcoal and salt.

Delaware Growing Mash

Cod liver oil, dried skim milk, alfalfa leaf meal, meat scrap, fish meal, bone meal, soybean oil meal, corn meal, wheat bran, wheat middlings, wheat flour middlings, oat meal, phosphatic calcium carbonate, $\frac{1}{2}$ of 1% salt.

Indian Growing Mash

Dried skim milk, meat scrap, fish meal, bone meal, soybean oil meal, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt.

Indian Laying Mash

Dried skim milk, meat scrap, fish meal, bone meal, soybean oil meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground barley, ground oats, phosphatic calcium carbonate and salt.

Indian Sweet 20% Dairy Feed

Cane molasses, linseed oil meal, corn gluten feed, cottonseed meal, soybean oil meal, peanut oil meal, wheat bran, wheat middlings, corn meal, reground oatfeed, corn distillers grains, phosphatic calcium carbonate and salt.

Frank Diauto**Diauto's Broiler Ration**

Soy bean meal, yellow meal, bran, wheat flour middlings, ground oats, skim milk, alfalfa leaf meal, 50% meat scraps, fish meal 55%, cod liver oil, calcium carbonate, salt, chicken feed.

Diauto's Fancy Chick Growing Mash

Bran, middlings pulverized ground oats, feeding oat meal, 50% scraps, dried milk, soy bean meal, oyster shell meal, alfalfa meal, fish meal, salt, cod liver oil, corn meal.

Diauto's Dairy Feed

Gluten feed, corn meal, ground oats, bran, linseed meal, cotton seed meal, salt.

Diauto's Special Egg Mash

Linseed meal, cod liver oil, meal, middlings, ground oats, feeding oat meal, oyster shell meal, 50% scraps, fish meal, milk, soy bean meal, ground barley, alfalfa meal, salt, bran.

F. Diehl & Son, Inc.**Diehl's Dairy Feed**

Bran, brewers grains, cottonseed meal, gluten, linseed meal, corn meal, oat meal mill by-products, ground barley, pure ground oats, wheat middlings, salt, calcium carbonate, bone meal, sweetened.

Diehl's Dry Mash

Alfalfa, ground oats, bone, dried milk, charcoal, fish scraps, gluten meal, linseed, meal, meat scraps, middlings and red dog.

Dietrich & Gambrill, Inc.**All Mash Starter & Grower**

Corn meal, oat meal, wheat middlings, alfalfa leaf meal, malt flour, fish meal, dried buttermilk, cod liver oil, soy bean meal, meat scrap, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

All Purpose Complete Ration

Coarse ground yellow corn, coarse ground wheat, pulverized oats, flour middlings, wheat bran, alfalfa leaf meal, dried buttermilk, meat scrap, fish meal, soy bean meal, steamed bone meal, 1% calcium carbonate, 1% salt, cod liver oil, potassium iodide.

D. & G. All Mash Turkey Starter

Pure corn meal, wheat bran, wheat middlings, oat meal, alfalfa leaf meal, soy bean meal, linseed oil meal, meat scrap, fish meal, dried buttermilk, bone meal, 1% calcium carbonate, 1% salt, cod liver oil, potassium iodide.

D. & G. Breeder Mash

Wheat bran, wheat middlings, yellow corn meal, pulverized oats, alfalfa leaf meal, fish meal, meat scraps, dried buttermilk, cod liver oil, soy bean meal, malt flour, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

D. & G. Dairy Feed

Cottonseed meal, peanut meal, linseed meal, gluten feed, corn feed meal, wheat bran, ground grain screenings, clipped oat byproducts, oat middlings, oats shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

D. & G. Poultry Conditioning Ration

Cracked wheat, fine chick corn, corn meal, reddog, pulverized oats, wheat bran, alfalfa leaf meal, dried buttermilk, fish meal, meat scrap, soy bean meal, grit, bone meal, calcium carbonate, salt, mineral oil, peanut oil, cod liver oil, potassium iodide.

D. & G. Turkey Growing Mash

Pure corn meal, wheat bran, wheat middlings, pulverized oats, oat meal, alfalfa meal, soy bean meal, linseed meal, meat scrap, dried buttermilk, bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Frederick Dairy Feed

Cottonseed meal, peanut meal, gluten feed, dried brewers grains, wheat bran, corn feed meal, ground grain screenings, clipped oat byproducts, oat middlings, oat shorts, oat hulls, molasses, 1% bone meal, 1% calcium carbonate, 1% salt, potassium iodide.

Frederick Growing Mash

Wheat middlings, wheat bran, pulverized oats, corn feed meal, gluten feed, ground barley, soy bean meal, meat scrap, dried buttermilk, alfalfa leaf meal, bone meal, 1% calcium carbonate, 1% salt, potassium iodide, cod liver oil.

Frederick Laying Mash

Wheat bran, wheat middlings, corn feed meal, pulverized oats, ground barley, gluten meal, meat scrap, fish meal, alfalfa meal, soy bean meal, bone meal, 1% calcium carbonate, 1% salt, dried buttermilk, potassium iodide, cod liver oil.

Gambrill's Laying Mash

Wheat bran, wheat middlings, corn feed meal, linseed meal, soy bean meal, pulverized oats, alfalfa leaf meal, gluten meal, malt flour, meat scrap, fish meal, dried buttermilk, bone meal, 1% calcium carbonate, 1% salt, cod liver oil, potassium iodide.

East Bridgewater Farmers' Exchange

Special Dairy Feed

Brewers' grains, wheat middlings, wheat bran, corn meal or hominy, ground oats, gluten meal, gluten feed, linseed meal, cottonseed meal, beet pulp, soy bean meal, distillers grain, bone meal, molasses and salt.

Special Growing Feed

Corn meal, wheat bran, wheat middlings, reddog flour, alfalfa leaf meal, dried milk, fine ground beef scraps, fortified cod liver oil, ground oats, ground barley, ground wheat, fish scraps, soy bean meal, calcite flour.

Special Mash Feed

Yellow corn meal, wheat bran, reddog flour, fine ground beef scraps, alfalfa leaf meal, ground oats, ground barley, ground wheat, wheat middlings, dried milk, fortified cod liver oil, soya bean meal, calcium carbonate and fish scraps.

Eastern Grain Co.

Eastern 24% Dairy Ration, Sweetened

Wheat bran, wheat middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten, brewers grains, ground barley, corn meal, cane molasses, soy bean meal, high grade edible bone meal, calcium carbonate, and salt.

Eastern 20% Dairy Ration Sweetened

Wheat bran, wheat middlings, cottonseed meal, linseed meal, distillers grains, ground oats, Buffalo gluten, Diamond gluten meal, brewers grains, ground barley, corn meal, pure cane molasses, hominy, soy bean meal, high grade edible bone meal, calcium carbonate, salt.

Eastern States Farmers' Exchange

Eastern States All-Mash Developer

E. S. yellow corn meal, wheat bran, wheat flour middlings, E. S. ground oats, E. S. ground barley, alfalfa leaf meal, 41% prot. soybean oil meal, dried skimmed milk, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, dicalcium phosphate, sardine oil, salt.

Eastern States Combination Mash

E. S. yellow corn meal, wheat bran, wheat flour middlings, E. S. ground oats, dried skimmed milk, alfalfa leaf meal, 50% protein meat scraps, 58% protein fish meal, oyster shell meal, sardine oil with 0.25% wheat germ oil, dicalcium phosphate, salt.

Eastern States Developer

E. S. yellow corn meal, wheat bran, wheat flour middlings, E. S. ground barley, E. S. ground oats, 41 per cent protein soybean oil meal, alfalfa leaf meal, 58 per cent protein fish meal, 50 per cent protein meat scraps, dried skimmed milk, dried whey, oyster shell meal, sardine oil salt, dicalcium phosphate.

Eastern States Egg Mash

Wheat standard middlings, E. S. yellow corn meal, wheat bran, E. S. ground barley, 58 per cent protein fish meal, 50 per cent protein meat scraps, 41 per cent protein soybean oil meal, E. S. ground oats, alfalfa leaf meal, corn gluten meal, oyster shell meal, sardine oil, salt.

Eastern States Fattener Mash

E. S. yellow corn meal, corn oil meal, ground oat groats, dried skimmed milk, wheat standard middlings, wheat red dog, E. S. ground oats, 41 per cent protein soybean oil meal, salt.

Eastern States Flushing Mash

Dried whey, E. S. yellow corn meal, wheat bran, wheat flour middlings, 41 per cent protein soybean oil meal, alfalfa leaf meal, 58 per cent protein fish meal, 50 per cent protein meat scraps, sardine oil.

Eastern States Highland 16

Distillers' corn dried grains, oat mill feed (oat hulls, oat shorts, oat middlings), hominy feed, E. S. ground barley, cane molasses, wheat bran, 41% protein soybean oil meal, 41% protein cottonseed meal prime quality, corn gluten feed, wheat germ oil meal, calcium carbonate, salt.

Eastern States Highland 20

Distillers' corn dried grains, oat mill feed (oat hulls, oat shorts, oat middlings), 41% protein soybean oil meal, 41% protein cottonseed meal prime quality, cane molasses, E. S. ground barley, hominy feed, wheat bran, corn gluten feed, wheat germ oil meal, calcium carbonate, salt.

Eastern States Producer 20

E. S. yellow corn meal, wheat bran, wheat flour middlings, 50% protein meat scraps, E. S. ground oats, alfalfa leaf meal, dried skimmed milk, 58% protein fish meal, 41% protein soybean oil meal, oyster shell meal, sardine oil with 0.25% wheat germ oil, dicalcium phosphate, salt.

Eastern States Producer 17

E. S. yellow corn meal, wheat flour middlings, wheat bran, E. S. ground oats, 50% protein meat scraps, 58% protein fish meal, alfalfa leaf meal, dried skimmed milk, oyster shell meal, sardine oil with 0.25% wheat germ oil, dicalcium phosphate, salt.

Eastern States Sixteen

E. S. yellow corn feed meal, E. S. ground oats, wheat bran, distillers' corn dried grains, cane molasses, corn gluten feed, E. S. ground barley, 41 per cent protein cottonseed meal prime quality, 32 per cent protein old process linseed meal, 41 per cent protein soybean oil meal, wheat germ oil meal, dicalcium phosphate, salt.

Eastern States Starting and Broiler Ration

E. S. yellow corn meal, wheat bran, wheat flour middlings, ground oat groats, dried skimmed milk, alfalfa leaf meal, 50 per cent protein meat scraps 58 per cent protein fish meal, oyster shell meal, salt, sardine oil, dicalcium phosphate

Eastern States 32% Supplement Feed

41 per cent protein cottonseed meal prime quality, 41 per cent protein soybean oil meal, distillers' corn dried grains, corn gluten meal, 32 per cent protein old process linseed meal, cane molasses, wheat bran, dicalcium phosphate, salt.

Eastern States Turkey Breeder Mash

E. S. yellow corn meal, wheat bran, 50% protein meat scraps, wheat flour middlings, dried skimmed milk, alfalfa leaf meal, 41% protein soybean oil meal, E. S. ground oats, 58% protein fish meal, corn gluten meal, oyster shell meal, sardine oil with 0.25% wheat germ oil, dicalcium phosphate, salt.

Eastern States Turkey-Fat

E. S. yellow corn meal, wheat bran, wheat flour middlings, 50 per cent protein meat scraps, E. S. ground oats, 41 per cent protein soybean oil meal, alfalfa leaf meal, corn gluten meal, dried skimmed milk, ground oat groats, oyster shell meal, salt.

Eastern States Turkey-Grow

E. S. yellow corn meal, wheat bran, wheat flour middlings, 41 per cent protein soybean oil meal, 58 per cent protein fish meal, ground oat groats, alfalfa leaf meal, dried skimmed milk, corn gluten meal, E. S. ground oats, 50 per cent protein meat scraps, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Eastern States Turkey-Start

E. S. yellow corn meal, wheat bran, wheat flour middlings, 41 per cent protein soybean oil meal, 58 per cent protein fish meal, ground oat groats, corn gluten meal, alfalfa leaf meal, 50 per cent protein meat scraps, dried skimmed milk, oyster shell meal, sardine oil, dicalcium phosphate, salt.

Michael W. Ellis

The Ellis Dairy Feed

Corn meal, wheat middlings, wheat bran, gluten meal, hominy feed, gluten feed, corn distillers grains, cottonseed meal, oil meal, ground oats, calcite flour, salt, edible bone meal. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Poultry Mash

Wheat bran, wheat middlings, hominy feed, gluten feed, corn meal, rolled oats or feeding oat-meal, alfalfa leaf meal, cod liver oil, beef scraps, dried skim milk or buttermilk, edible bone meal, salt, charcoal, calcite flour. (Wheat feeds may contain screenings not exceeding mill run.)

The Ellis Special Dairy Feed

Hominy feed, gluten feed, wheat bran, wheat middlings, Sugared Vim feed, cottonseed meal, gluten meal, salt, calcite flour, alfalfa meal. (Wheat feeds may contain screenings not exceeding mill run.)

Elmore Milling Co., Inc.

Elmore Breeders Mash

Wheat germ meal, yellow corn meal, wheat bran, wheat middlings, ground heavy oats, alfalfa leaf meal, fish meal, meat & bone meal, dried skim milk, cod liver oil, cod liver meal, oyster shell flour, salt.

Elmore Chixsaver

Dried skim milk, wheat flour midds, wheat bran, corn meal, alfalfa leaf meal, oat flour, meat and bone meal, fish meal, cod liver oil, cod liver meal, corn gluten meal, oyster shell flour, fine table salt.

Elmore Egg Mash

Dried skim milk, meat meal, second clear wheat flour, pure ground oats, wheat middlings, corn meal, (No. 2. yellow), wheat bran, alfalfa leaf meal, fish meal, bone meal, cod liver oil, oyster shell flour, salt.

Elmore Fleshing Pellets

Corn meal, corn oil meal, pulverized heavy oats, standard midds, low grade wheat flour, corn gluten meal, soya bean oil meal, dried skim milk, cod liver oil, salt.

Elmore Growing Mash

Dried buttermilk, meat meal, bone meal, wheat midds, wheat bran, low grade wheat flour, alfalfa leaf meal, corn meal, oat meal, gluten meal, fish meal, cod liver oil, oyster shell flour, salt.

Elmore M. A. C. Laying Mash

Alfalfa leaf meal, wheat bran (may contain mill run screenings), corn meal, fish meal, wheat midds, dried skim milk, ground heavy oats, meat scraps, oyster shell flour, cod liver oil, salt.

Elmore Milk Grains

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soya bean oil meal, calcium carbonate and salt.

Elmore Milk Grains Junior

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soya bean oil meal, calcium carbonate, salt.

Elmore Milk Grains Junlor Sweet

Corn distillers grains, wheat bran, old process oil meal, corn meal or hominy feed, barley malt sprouts, corn gluten feed, cotton seed meal, dried brewers' grains, soya bean oil meal, molasses, calcium carbonate, salt.

Elmore's Sweet Digesto Dairy Feed

Corn gluten feed, cotton seed meal, wheat bran, coconut oil meal, pulverized wheat screenings, oat meal mill by-products (oat hulls, oat midds and oat shorts), cane molasses, salt.

Elmore Turkey Fattener

Yellow corn meal, wheat bran, wheat middlings, ground oats, ground barley, alfalfa leaf meal, soya bean oil meal, corn gluten meal, dried skim milk, meat scraps, oyster shell flour, cod liver oil, salt.

Elmore Turkey Growing Mash

Yellow corn meal, wheat bran, wheat middlings, ground heavy oats, ground barley, alfalfa leaf meal, soya bean oil meal, corn gluten meal, dried skim milk, meat scraps, fish meal, oyster shell flour, cod liver oil, salt.

Emco Feed

Wheat bran, wheat midds, linseed oil meal, beet pulp, corn gluten feed, corn meal or hominy feed, cotton seed meal, calcium carbonate, salt.

Granger 24% Dairy Ration

Wheat bran, wheat middlings, cotton seed meal, soya bean meal, corn gluten feed, cane molasses, reground wheat screenings, ground oats, dried brewers' grains, calcium carbonate, salt.

Granger 20% Dairy Ration

Wheat bran, wheat midds, cotton seed meal, corn gluten feed, corn meal or hominy feed, soya bean meal, cane molasses, reground wheat screenings, ground oats, dried brewers' grains, copra oil meal, calcium carbonate, salt.

Waldorf 20% Dairy Ration

Soybean oil meal, wheat bran, coconut oil meal, corn gluten feed, corn gluten meal, cotton seed meal, cane molasses, ground oats, pulverized grain screenings, calcium carbonate, salt.

John W. Eshelman & Sons**Eshelman Certified 20% Dairy Ration**

Corn gluten feed, hominy feed, ground oats, o. p. oil meal, wheat bran, cottonseed meal, soybean oil meal, wheat middlings, corn distillers' dried grains, cane molasses, steamed bone meal, calcium carbonate, salt.

Eshelman Challenge Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Lancaster 20 Dairy Feed

Wheat bran, cottonseed meal, ground oats, corn gluten feed, cane molasses, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Pennsy 16 Dairy Feed

Wheat bran, cottonseed meal, cane molasses, corn gluten feed, brewers' dried grains, o. p. oil meal, soybean oil meal, reground grain screenings from wheat, oat mill feed (oat midds, oat hulls, oat shorts), 1% bone meal, 1% salt, 1% calcium carbonate.

Eshelman Pennsy Laying Mash

Corn meal, wheat middlings, meat scrap, wheat bran, ground oats, alfalfa meal, soybean oil meal, cane molasses, fish meal, corn gluten feed, o. p. oil meal, 1% bone meal, 1% calcium carbonate, ½% salt.

Eshelman Red Rose All Mash Starter

Corn meal, wheat bran, wheat middlings, pure oat meal, meat scrap, fish meal, alfalfa leaf meal, dried buttermilk, dried whey, o. p. oil meal, 2½% calcium carbonate, 1% bone meal, ½% salt, fortified cod liver oil.

Eshelman Red Rose Broiler Ration

Pure corn meal, wheat bran, wheat middlings, oat meal, pulverized oats, meat scrap, wheat red dog, soybean oil meal, alfalfa meal, dried buttermilk, dried whey, o. p. oil meal, fish meal, 1% calcium carbonate, ½% salt, fortified cod liver oil.

Eshelman Red Rose 24 Dairy Feed

Cottonseed meal, wheat bran, corn gluten feed, cane molasses, corn gluten meal, ground oats, brewers' dried grains, corn distillers' dried grains, corn meal, o. p. oil meal, soybean oil meal, 1% bone meal, 1% calcium carbonate, 1% salt.

Eshelman Red Rose Growing Mash

Wheat middlings, corn meal, wheat bran, meat scrap, pulverized oats, corn gluten feed, oat meal, soybean oil meal, hominy feed, o. p. oil meal, fish meal, dried buttermilk, dried whey, fine alfalfa meal, 1% calcium carbonate, ½% salt, fortified cod liver oil.

Eshelman Red Rose Laying Mash

Wheat middlings, corn meal, meat scrap, wheat bran, corn gluten feed, ground oats, o. p. oil meal, fish meal, soybean oil meal, hominy feed, fine alfalfa meal, dried buttermilk, dried dog, 1% calcium carbonate, ½% salt, fortified cod liver oil.

Farm Service Stores, Inc.

C Dairy Ration

Corn meal, hominy, cottonseed meal, linseed oil meal, corn gluten feed, wheat bran (with wheat screenings not exceeding mill run), wheat midds (with wheat screenings not exceeding mill run), ground oats, bone meal, calcium carbonate, salt, (with or without molasses).

C Growing Mash

Corn meal, mixed feed, ground oats, meat scraps, dried milk, fish scraps, alfalfa meal, calcium carbonate, salt, cod liver oil.

C Laying Mash

Corn meal, mixed feed, corn gluten feed, linseed oil meal, meat scraps, alfalfa meal, ground oats, soya bean oil meal, calcium carbonate, bone meal, fish meal, salt.

18% Dairy Ration

Corn meal, hominy, wheat bran (with wheat screenings not exceeding mill run), corn gluten feed, cottonseed meal, linseed oil meal, dried brewers grains, soya bean oil meal, molasses, oat midds, calcium carbonate, ground wheat screenings, malt sprouts, ground oats, salt.

Diamond A Dairy Ration

Corn meal, hominy, linseed oil meal, corn gluten feed, wheat bran (with wheat screenings not exceeding mill run), dried brewers grains, corn gluten meal, cottonseed meal, stock feed, calcium carbonate, salt.

Diamond C Dairy Feed

Wheat bran (with wheat screenings not exceeding mill run), wheat midds (with wheat screenings not exceeding mill run), corn meal, hominy, cottonseed meal, linseed oil meal, beet pulp, corn gluten feed, corn gluten meal, salt.

Lawrence Cow Ration

Wheat bran (with wheat screenings not exceeding mill run), corn meal, hominy, ground oats, pulverized oats, corn gluten feed, cottonseed meal, linseed oil meal, dried brewers grains, ground wheat screenings, molasses, salt.

New England Dairy Ration

Corn gluten meal, corn gluten feed, wheat bran (with wheat screenings not exceeding mill run), yellow corn meal, linseed oil meal, cottonseed meal, hominy, ground oats, molasses, calcium carbonate, salt.

North Star 24% Dairy Feed

Corn meal, hominy, ground oats, soya bean oil meal, dried brewers grains, distillers' grains, wheat bran (with wheat screenings not exceeding mill run), corn gluten meal, corn gluten feed, cottonseed meal, linseed oil meal, molasses, calcium carbonate, ground barley, ground wheat screenings, bone meal, salt

North Star 20% Dairy Feed

Corn meal, hominy, soya bean oil meal, dried brewers grains, corn gluten feed, corn gluten meal, wheat bran (with wheat screenings not exceeding mill run), cottonseed meal, linseed oil meal, ground wheat screenings, beet pulp, molasses, oat midds, calcium carbonate, bone meal, salt.

North Star Growing Mash

Corn meal, pulverized oats, alfalfa meal, wheat bran (with wheat screenings not exceeding mill run), wheat midds (with wheat screenings not exceeding mill run), corn gluten feed, linseed oil meal, calcium carbonate, meat scraps, fish meal, dried milk, soya bean oil meal, salt, cod liver oil.

North Star Laying Mash

Corn meal, pulverized oats, alfalfa meal, wheat bran (with wheat screenings not exceeding mill run), wheat midds (with wheat screenings not exceeding mill run), corn gluten feed, ground barley, soya bean oil meal, meat scraps, calcium carbonate, fish meal, dried milk, salt, (with or without cod liver oil).

First National Stores, Inc.

Henfield Egg Mash

Hominy, corn meal, wheat middlings, wheat flour middlings, wheat bran, meat scraps, corn gluten feed, pulverized oats, old process linseed oil meal, fish meal, alfalfa meal, dried butter-milk, fortified cod liver oil, steamed bone meal, 1% calcium carbonate, $\frac{1}{2}$ of 1% salt.

Flory Milling Co., Inc.

Flory's "All-Mash" Chick Starter

Oatmeal, yellow corn meal, wheat bran, standard wheat middlings, choice fine alfalfa meal, dried tomato pulp, ground barley, dried skim milk, fish meal, meat scrap, liver meal, soybean meal, linseed oil meal, ground wheat, pulverized oats, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Dairy Feed

Cottonseed meal, o. p. oil meal, peanut meal, ground white oats, coconut oil meal, soybean meal, corn gluten feed, corn gluten meal, malt sprouts, corn distillers' grains, dried brewers' grains, alfalfa meal, wheat bran (containing screenings not exceeding mill run), standard wheat middlings, molasses, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's 24% Special Dairy Feed

Cottonseed meal, corn gluten feed, peanut meal, ground white oats, corn gluten meal, wheat bran (containing screenings not exceeding mill run), coconut oil meal, corn distillers' grains, dried brewers' grains, malt sprouts, molasses, soybean meal, alfalfa meal, corn meal, standard wheat middlings, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate iron sulphate, sulphur, iodine and salt).

Flory's 20% Special Dairy Feed

Cottonseed meal, gluten meal, gluten feed, corn meal, alfalfa meal, ground oats, coconut oil meal peanut meal, soybean meal, corn distillers' grains, dried brewers' grains, malt sprouts, wheat bran (containing screenings not exceeding mill run), essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's Growing Mash

Yellow corn meal, dried skim milk, choice alfalfa meal, dried tomato pulp, ground white oats, ground barley, standard wheat middlings, wheat bran, corn gluten meal, meat scrap, liver meal, fish meal, soybean meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

Flory's 3 in 1 Starter-Growing-Laying Mash

Alfalfa meal, fish meal, oatmeal, pure corn meal, dried buttermilk, meat scrap, soybean meal, ground wheat, ground barley, wheat bran, standard wheat middlings, tomato pulp, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Flory's 32% Protein Supplement Mash

Fish meal, soybean oil meal, meat scrap, liver meal, dried skim milk, corn gluten meal, standard wheat middlings, wheat bran, coconut oil meal, alfalfa leaf meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

Golden Egg Laying Mash

Dried buttermilk, meat scrap, fish meal, dried tomato pulp, soybean meal, yellow corn meal, wheat flour middlings, ground barley, wheat bran, ground white oats, choice alfalfa meal, corn gluten meal, coconut oil meal, cod liver oil, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Record Dairy Feed

O. p. oil meal, cottonseed meal, peanut meal, soybean meal, corn gluten feed, standard wheat middlings, corn meal, wheat bran (containing screenings not exceeding mill run), corn distillers' grains, dried brewers' grains, malt sprouts, ground oats, molasses, alfalfa meal, coconut oil meal, essential minerals (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt).

Fred A. Fountain**Fountains' Buttermilk Laying Mash**

Dry buttermilk or dry skim milk, beef scrap, fish meal, alfalfa meal, ground oat groats, second clear flour, bran, middlings, yellow corn meal, gluten, calcium carbonate, table salt.

J. B. Garland & Son**Garland Chick Starter**

Cod liver oil, corn meal, ground oats, oat meal, dried milk, ground wheat, ground barley, fish meal, meat scraps, wheat bran, wheat middlings, alfalfa leaf meal, calcium carbonate and salt.

Garland Complete Starting and Broiler Mash

Alfalfa leaf meal, fish meal, meat scraps, ground wheat, dried milk, cod liver oil, ground barley, ground oats, corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

Garland 20% Dairy Ration

Soya bean meal, brewers dried grains, linseed oil meal, cottonseed meal, corn gluten feed, distillers dried grains, malt sprouts, palm kernel meal, wheat bran, middlings, corn meal, fish meal, molasses, calcium carbonate and salt.

Garland 24% Dairy Ration

Soya bean meal, brewers dried grains, distillers dried grains, cottonseed meal, linseed oil meal, corn gluten feed, wheat bran, middlings, malt sprouts, corn gluten meal, palm kernel meal, corn meal, fish meal, molasses, calcium carbonate and salt.

Garland Growing Mash

Alfalfa leaf meal, fish meal, meat scraps, linseed oil meal, dried milk, wheat bran, wheat middlings, soybean meal, ground oats, ground wheat, corn meal, calcium carbonate and salt. (With or without cod liver oil.)

Garland Laying Mash

Alfalfa leaf meal, soybean meal, fish meal, meat scraps, dried milk, linseed oil meal, wheat bran, wheat middlings, ground oats, ground wheat, corn meal, calcium carbonate and salt. (With or without cod liver oil.)

Royal 24% Dairy Ration

Soya bean meal, ground corn, ground oats, corn gluten feed, wheat and wheat bran processed, distillers dried grains, cottonseed meal, palm kernel meal, molasses, calcium carbonate and salt.

Royal 20% Dairy Ration

Soya bean meal, corn gluten feed, distillers dried grains, wheat and wheat bran processed, cottonseed meal, palm kernel meal, ground corn, ground oats, molasses, calcium carbonate and salt.

Royal Laying Mash

Alfalfa meal, corn meal, ground oats, ground wheat, dried milk, wheat bran, wheat middlings, cod liver oil, fish meal, meat scraps, linseed oil meal, soya bean meal, calcium carbonate and salt.

W. K. Gilmore & Sons, Inc.**Neponset Poultry Mash**

Wheat bran, wheat middlings, corn meal, ground oats, alfalfa, beef scraps, fish scraps, linseed oil meal, corn gluten, ground rolled oats, calcite flour, dried skim milk, fine salt, soy bean meal.

Conference Mash

Yellow corn meal, standard wheat bran, wheat flour middlings, pure ground oats, meat scraps 50%, pure fish meal 55%, alfalfa leaf meal, milk, calcite flour, cod liver oil, dicalcium phosphate, salt.

Goode Grain Co.

Goode Laying Mash

Yellow corn meal, soy bean meal, wheat middlings, wheat bran, ground oats, meat scraps, fish meal, dried skim or buttermilk, alfalfa meal, calcium carbonate, salt, cod liver oil, with & without Vitidine a mineral concentrate.

Goode Starting & Growing Mash

Yellow corn meal, soy bean meal, wheat middlings, wheat bran, ground oats, meat scraps, fish meal, dried skim or buttermilk, alfalfa meal, calcium carbonate, salt, cod liver oil, with & without Vitidine a mineral concentrate.

D. H. Grandin Milling Co.

Grandin's Baby Chick Starter

Dried buttermilk, fine ground hulled oats, ground wheat, corn meal, hominy feed, wheat middlings, alfalfa leaf meal, calcium carbonate, bone meal, one half of one per cent salt and liver oil.

Grandin's 20% Dairy Feed (Sweetened)

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn distillers dried grains, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), ground oats, corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate, salt and potassium iodide.

Grandin's 24% Dairy Feed (Sweetened)

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten meal, corn distillers dried grains, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), ground oats, corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate, salt and potassium iodide.

Grandin's Growing Mash

Dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten feed, alfalfa leaf meal, ground yellow corn, hominy feed, pulverized oats, ground barley, wheat bran, wheat middlings, calcium carbonate, salt and potassium iodide.

Grandin's Laying Mash

Dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten meal, corn gluten feed, ground yellow corn, hominy feed, alfalfa leaf meal, pulverized oats, ground barley, wheat bran, wheat middlings, calcium carbonate, salt and potassium iodide.

Grandin's Milk Starter

Dried beet pulp, cottonseed meal, soybean oil meal, linseed oil meal, corn distillers dried grains, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), ground oats, corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate, salt and potassium iodide.

Grandin's 16% Dairy Feed (Sweetened)

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn distillers dried grains, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), ground oats, corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate, salt and potassium iodide.

Grandin's Start-To-Finish Mash

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, soybean oil meal, corn gluten feed, alfalfa leaf meal, ground yellow corn, hominy feed, pulverized oats, ground barley, wheat bran, wheat middlings, calcium carbonate, salt and potassium iodide.

Grandin's Turkey Starter

Concentrated cod liver oil, dried buttermilk, ground meat and bone, fish meal, corn gluten meal, soybean oil meal, alfalfa leaf meal, ground hulled oats, hominy feed, ground yellow corn, ground wheat, pulverized oats, ground barley, wheat bran, wheat middlings, calcium carbonate, salt and potassium iodide.

Grandin's Twin Six Dairy Feed

Cottonseed meal, soybean oil meal, linseed oil meal, corn distillers dried grains, corn gluten feed, wheat bran and wheat middlings (with ground wheat screenings not exceeding mill run), alfalfa meal, ground oats, corn meal, corn feed meal, hominy feed, steamed bone meal, calcium carbonate, salt and potassium iodide.

M-S (Money-Saver) 20% Dairy Feed (Sweetened)

Cane molasses, cottonseed meal, soybean oil meal, linseed oil meal, corn gluten feed, corn distillers dried grains, brewers dried grains, wheat bran, wheat middlings, 10% ground grain screenings from corn, wheat, oats and barley, oat mill feed (oat hulls, oat shorts, oat middlings), steamed bone meal, calcium carbonate, salt and potassium iodide.

Great Atlantic & Pacific Tea Co.

Daily Egg Laying Mash Feed

Ground oats, ground barley, soybean oil meal, old process linseed oil meal, corn gluten meal, wheat standard middlings, wheat bran, alfalfa meal, corn feed meal, dried buttermilk, dried skim milk, meat and bone scrap, fish meal, flour middlings, cod liver oil, cod liver meal, calcium carbonate from limestone 2 1/2%, steamed bone meal 1 1/2%, salt 1/2 of 1%, red iron oxide .02%, and .0015% potassium iodide.

Daily Growth Chick Starter

Dried buttermilk, dried skimmed milk, meat and bone scrap, wheat flour, wheat standard middlings, ground corn, corn feed meal, ground oats, ground oat groats, old process linseed oil meal, alfalfa meal, cod liver oil, calcium carbonate from limestone 1%, salt $\frac{1}{2}$ of 1%, steamed bone meal $\frac{1}{2}$ of 1%.

Daily Growth Growing Mash

Meat and bone scrap, dried buttermilk, dried skimmed milk, wheat bran, alfalfa meal, wheat standard middlings, corn feed meal, ground oats, ground barley, old process linseed oil meal, corn gluten feed, cod liver oil, calcium carbonate from limestone 1%, steamed bone meal $\frac{1}{2}$ %, salt $\frac{1}{2}$ of 1%.

Milky Way Dairy Feed 20%

Corn feed meal, dried grains from barley, malt and corn, wheat bran, cottonseed meal, wheat standard middlings, ground oats, ground barley, molasses, soybean oil meal, old process linseed oil meal, corn gluten meal, calcium carbonate from limestone 1%, salt 1%, malt sprouts, corn gluten feed.

Hales & Hunter Co.**Morning Glory Egg Mash**

Whole ground corn, ground oats, wheat bran, wheat middlings, corn gluten feed, soy bean oil meal, alfalfa meal, dried buttermilk, meat scraps, granulated charcoal $\frac{1}{2}$ %, and minerals. (Ground limestone 1%, salt 1%.) Cod liver oil, sardine oil.

Red Comb All-Mash

Whole ground corn, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, pulverized oats, fish meal, dried buttermilk, dried whey, steamed bone meal and not over $1\frac{1}{2}$ % minerals. (Calcium carbonate $\frac{1}{2}$ %, sodium chloride $\frac{1}{2}$ %, granulated charcoal $\frac{1}{4}$ %, iron sulphate $\frac{1}{8}$ %, sulphur $\frac{1}{8}$ %). Cod liver oil, sardine oil.

Red Comb Batry Fed Layer

Whole ground corn, feeding oat meal, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, pulverized oats, fish meal, dried buttermilk, steamed bone meal, and not over $1\frac{1}{2}$ % minerals. (Calcium carbonate $\frac{1}{2}$ %, sodium chloride $\frac{1}{2}$ %, granulated charcoal $\frac{1}{4}$ %, iron sulphate $\frac{1}{8}$ %, sulphur $\frac{1}{8}$ %). Cod liver oil, sardine oil.

Red Comb Broiler Mash

Whole ground corn, fine ground feeding oat meal, pulverized oats, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, fish meal, dried buttermilk, steamed bone meal and not over 3% minerals. (Calcium carbonate 1%, sodium chloride 1%, granulated charcoal $\frac{1}{2}$ %, iron sulphate $\frac{1}{4}$ %, sulphur $\frac{1}{4}$ %). Sardine oil, cod liver oil.

Red Comb Chick Starter

Whole ground corn, ground oat groats, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, pulverized oats, fish meal, dried buttermilk, steamed bone meal and not over 3% minerals. (Calcium carbonate 1%, sodium chloride 1%, granulated charcoal $\frac{1}{2}$ %, iron sulphate $\frac{1}{4}$ %, sulphur $\frac{1}{4}$ %). Sardine oil, cod liver oil.

Red Comb Egg Mash

Whole ground corn, feeding oat meal, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, pulverized oats, fish meal, dried buttermilk, steamed bone meal and not over 3% minerals. (Calcium carbonate 1%, sodium chloride 1%, granulated charcoal $\frac{1}{2}$ %, iron sulphate $\frac{1}{4}$ %, sulphur $\frac{1}{4}$ %). Sardine oil, cod liver oil.

Red Comb Growing Mash

Whole ground corn, fine ground feeding oat meal, pulverized oats, wheat bran, wheat middlings, corn gluten feed, meat scraps, alfalfa meal, soy bean oil meal, fish meal, dried buttermilk, steamed bone meal and not over 3% minerals. (Calcium carbonate 1%, sodium chloride 1%, granulated charcoal $\frac{1}{2}$ %, iron sulphate $\frac{1}{4}$ %, sulphur $\frac{1}{4}$ %). Sardine oil, cod liver oil.

Red Comb Turkey Breeder

Whole ground corn, feeding oat meal, wheat bran, wheat middlings, corn gluten meal, meat scraps, alfalfa meal, soy bean oil meal, pulverized oats, fish meal, dried buttermilk, steamed bone meal and not over 3% minerals. (Calcium carbonate 1%, sodium chloride 1%, granulated charcoal $\frac{1}{2}$ %, iron sulphate $\frac{1}{4}$ %, sulphur $\frac{1}{4}$ %). Sardine oil, cod liver oil.

D. Harbeck**Welcome Dairy Feed**

Bran, beet pulp, cottonseed meal, corn gluten meal, ground oats, hominy or corn feed meal, oil meal, middlings, steam bone meal, calcium carbonate, salt.

Welcome Growing Mash

Corn meal, bran, flour middlings, ground oats, alfalfa meal, meat scraps, fish meal, dried skimmed milk or buttermilk, ground barley, hominy feed, oil meal, ground wheat, bone meal, shell flour, salt, cod liver oil.

Welcome Laying Mash

Corn meal, wheat bran, flour middlings, ground oats, meat scraps, fish meal, alfalfa meal, dried skimmed milk or buttermilk, salt, shell flour, cod liver oil.

Welcome Starter & Broiler Ration

Corn meal, bran, flour middlings, ground oat groats or feeding oat meal, dry skimmed milk or buttermilk, alfalfa meal, meat scraps, fish meal, shell flour, salt, cod liver oil.

D. B. Hodgkins' Sons**Hodgkins' Dairy Ration**

Wheat bran, hominy, ground oats, corn gluten feed, corn meal, cottonseed meal, soy bean meal, linseed meal, beet pulp, brewers grains, molasses, calcium carbonate and salt.

Hodgkins' Growing Mash

Corn meal, wheat bran, wheat middlings, flour middlings, ground oats, alfalfa meal, dried skim milk, soy bean oil meal, meat scraps, fish meal, oyster shell meal, salt and cod liver oil.

Hodgkins' Milk Ration

Wheat bran, corn gluten feed, cottonseed meal, linseed meal, soy bean meal, oat feed, corn meal, hominy meal, brewers grain, beet pulp, molasses, bone meal, ground limestone and salt.

Hodgkins' Poultry Mash

Ground corn, oats, middlings and bran (with screenings not to exceed mill run), corn gluten feed, linseed meal, ground meat scraps, calcium carbonate, dried skim milk or dried butter-milk, dairy salt, fish meal, alfalfa leaf meal and cod liver oil.

Horvitz Grain Co.**Wantmore Dairy Ration**

Hominy feed or corn meal, wheat bran, ground oats, gluten feed and gluten meal, linseed meal, cottonseed meal, wheat middlings, calcium carbonate, salt.

Wantmore Dairy with Beet Pulp

Hominy feed or corn meal, wheat bran, gluten feed & gluten meal, linseed meal, cottonseed meal, wheat middlings, salt, beet pulp, ground oats, calcium carbonate.

Wantmore Sweetened Special Dairy 24%

Soy bean oil meal, cottonseed meal, oat meal mill by-products (oat middlings, oat shorts and oat hulls), wheat middlings, wheat bran, pure cane molasses, distillers' dried grains, corn gluten feed, calcium carbonate and dairy salt.

Wantmore Sweetened Special Dairy 20%

Soy bean oil meal, cottonseed meal, oat meal mill by-products (oat middlings, oat shorts and oat hulls), wheat middlings, wheat bran, pure cane molasses, distillers' dried grains, corn gluten feed, hominy feed, calcium carbonate and salt.

Jaquith & Co.**Jaquith & Co. Dairy Ration**

Wheat bran & middlings, cottonseed meal, oil meal, soya bean meal, salt, gluten feed, alfalfa, ground oats & corn, dried grains, molasses.

Jaquith & Co. Growing Mash

Ground corn, wheat and oats, soy bean meal, meat and bone meal, salt, dried milk, alfalfa, cod liver oil, and oil meal.

Jaquith & Co. Laying Mash

Ground corn, wheat and oats, gluten feed, oil meal, meat scraps, dried milk, soy bean meal, alfalfa meal, salt, and cod liver oil.

Jaquith & Co. Starting Feed

Ground corn, oats and wheat, dried milk, salt, alfalfa, cod liver oil.

Kasco Mills, Inc.**Apex Broiler Ration**

Ground barley, corn meal, pulverized oats, wheat bran, wheat middlings, linseed oil meal, meat scrap, bone meal, fish meal, milk sugar feed, dried skim milk, tested cod liver oil, calcite, salt, soybean oil meal, alfalfa meal.

Apex Laying Mash

Wheat bran, wheat middlings, corn meal, linseed oil meal, soybean oil meal, pulverized oats, ground barley, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed, Lactoflavin, $\frac{3}{4}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal.

Apex Starter

Oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, bone meal, fish meal, linseed oil meal, soybean oil meal, dried skim milk, milk sugar feed, Lactoflavin, alfalfa leaf meal, $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil.

Beatsall Milk Grains

Wheat bran, wheat middlings, linseed oil meal, corn distillers grains, corn gluten feed, corn gluten meal, cottonseed meal, soybean oil meal, hominy feed, $\frac{3}{4}$ of 1% salt, 1% calcite, beet pulp, molasses.

Kasco All Mash Chick Food

Wheat reddog, oatmeal, wheat middlings, wheat bran, corn meal, meat scrap, fish meal, bone meal, linseed oil meal, soybean oil meal, dried skim milk, milk sugar feed, Lactoflavin, $\frac{1}{2}$ of 1% salt, tested cod liver oil, calcite, alfalfa leaf meal.

Kasco All Mash Laying Food

Corn meal, pulverized oats, oatmeal, wheat bran, wheat middlings, wheat reddog, linseed oil meal, soybean oil meal, ground barley, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed, Lactoflavin, $\frac{1}{2}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal.

Kasco Broiler Ration

Wheat bran, wheat middlings, wheat reddog, linseed oil meal, corn meal, ground oatmeal, meat scrap, bone meal, alfalfa leaf meal, milk sugar feed, Lactoflavin, dried skim milk, tested cod liver oil, salt, calcite, soybean oil meal, fish meal.

Kasco Laying Mash

Wheat bran, wheat middlings, wheat reddog, corn meal, linseed oil meal, soybean oil meal, pulverized oats, ground oatmeal, meat scrap, bone meal, fish meal, dried skim milk, milk sugar feed, Lactoflavin, $\frac{3}{4}$ of 1% salt, calcite, tested cod liver oil, alfalfa meal.

Kasco Open Formula 20% Dairy Ration

Wheat bran, wheat middlings, ground barley, ground oats, malt sprouts, dried brewers grains, corn distillers grains, corn gluten feed, soybean oil meal, 41% cottonseed meal, hominy feed, cane molasses, salt, calcite.

Kasco Sweet 16% Dairy Feed

Wheat bran, corn gluten feed, corn gluten meal, cottonseed meal, soybean oil meal, ground oats, ground barley, ground wheat screenings, corn meal, oat mill feed (oat midds, oat hulls, oat shorts), malt sprouts, dried brewers grains, corn distillers grains, molasses, 1% salt, 1% calcite.

Larrowe Milling Co.**Larro The Ready Ration for Dairy Cows**

Cottonseed meal, yellow corn meal, wheat standard middlings, soybean oil meal, o. p. linseed oil meal, corn gluten feed, corn distillers' dried grains, dried beet pulp, wheat bran, ½% limestone, 1% salt.

Larro Broiler Feed

Yellow corn meal, wheat standard middlings, alfalfa meal, wheat bran, meat and bone scraps, dried buttermilk, soybean oil meal, fish meal, dried skimmed milk, ground oats, cod liver oil concentrate, 2% limestone, ½% salt.

Larro Chick Builder

Wheat bran, yellow corn meal, wheat standard middlings, ground barley, meat and bone scraps, soybean oil meal, fish meal, alfalfa meal, dried skimmed milk, dried buttermilk, ground oats, cod liver oil concentrate, 2½% limestone, ½% salt.

Larrowe's 16 Dairy Feed

Cottonseed meal, corn gluten feed, corn distillers' dried grains, wheat standard middlings, o. p. linseed oil meal, yellow corn meal, dried beet pulp, wheat bran, 1% salt.

Larro Egg Mash

Wheat bran, yellow corn meal, wheat standard middlings, ground barley, meat and bone scraps, soybean oil meal, fish meal, alfalfa meal, dried skimmed milk, dried buttermilk, ground oats, cod liver oil concentrate, 2½% limestone, ½% salt.

Larro Turkey Adult Mash

Wheat bran, yellow corn meal, wheat standard middlings, ground barley, meat and bone scraps, soybean oil meal, fish meal, alfalfa meal, dried skimmed milk, dried buttermilk, ground oats, cod liver oil concentrate, 2½% limestone, ½% salt.

Mansfield Coal & Grain Co.**Manco 20% Dairy**

Corn meal (or hominy), soya bean meal, oil meal, dried brewers grains, ground wheat screenings, wheat bran (with wheat screenings not exceeding mill run), corn gluten feed, cottonseed meal, molasses, calcium carbonate, bone meal, salt, beet pulp, corn gluten meal, oat midds.

Manco Laying Mash

Corn meal, ground oats, alfalfa meal, wheat middlings, wheat bran, gluten feed, soya bean meal, beef scraps, fish meal, dried milk, calcium carbonate, salt and cod liver oil.

Mansfield Milling Co.**Mansfield Chick-Growing Feed**

Corn meal, wheat middlings, wheat bran, red dog flour, oatmeal, fish scraps, meat scraps, dried milk, alfalfa leaf meal, soy bean oil meal, Vitamelk, charcoal, calcium carbonate, salt and cod liver oil.

Mansfield Cow-Ration

Corn meal, ground barley, wheat bran, wheat middlings, gluten feed, ground oats, linseed oil meal, cottonseed meal, gluten meal, soy bean oil meal and salt, calcium carbonate and bone meal.

Maritime Milling Co., Inc.**B-B Complete Chick Starter Ration**

Cod liver oil, kelp meal, milk sugar feed, dried buttermilk, dehydrated alfalfa leaf meal, wheat middlings, wheat bran, ground wheat, corn gluten meal, corn meal, pulverized heavy oats, pulverized barley, soya bean oil meal, ground oat meal, meat and bone meal, fish meal, calcium carbonate, salt and potassium iodide.

B-B Layer & Breeder Mash

Cod liver oil, liver meal, milk sugar feed, dried buttermilk, dehydrated alfalfa leaf meal, wheat bran and wheat middlings with mill run ground screenings, soya bean oil meal, corn gluten meal, corn meal, pulverized heavy oats, pulverized barley, ground oat meal, meat and bone meal, fish meal, calcium carbonate, salt and potassium iodide.

B-B Daisy Egg Mash

Cod liver oil, dried buttermilk, alfalfa meal, wheat bran and wheat middlings with mill run ground screenings, soya bean oil meal, corn gluten meal, corn meal, pulverized barley, pulverized oats, meat and bone meal, fish meal, calcium carbonate and salt.

Hi-Test Dairy Feed 20% Pro. Sweetened

Dried brewers grains, cotton seed meal, corn gluten feed, soya bean oil meal, hominy feed, ground oats, corn meal, cleaned, pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

Marmico 16% Protein Dairy Feed

Dried brewers grains, soya bean oil meal, cotton seed meal, corn gluten feed, corn meal, cleaned pulverized and bolted grain screenings, wheat bran, molasses, steamed bone meal, calcium carbonate and salt.

Merrimack Farmers' Exchange, Inc.**Merrimack All Mash**

Corn meal, wheat (cracked), ground oats, wheat bran, soybean oil meal, alfalfa meal, meat scraps, fish meal, dried milk, calcium carbonate, edible bone, oat groats, salt and tested oil.

Merrimack Chick Starter

Soybean oil meal, corn meal, cracked corn, white middlings, brown middlings, bran, cracked wheat, meat scraps, fish meal, ground groats, cut groats, milk, edible bone, salt, calcium carbonate, tested oil and alfalfa leaf meal.

Merrimack Dairy Ration

Dried brewers grain, gluten, cottonseed, soybean meal, oil meal, bran, middlings, ground oats, bone meal, salt, corn meal, calcium carbonate, distillers' dried grains.

Merrimack Eureka Dairy Ration

Oat feed, gluten meal, corn meal, cottonseed, bran, gluten feed, soybean oil meal, molasses, salt and calcium carbonate.

Merrimack Growing Mash

Soybean oil meal, corn meal, bran, red dog, brown middlings, ground groats, oats, alfalfa leaf meal, fish meal, milk, meat scraps, bone meal, calcium carbonate, salt and tested oil.

Merrimack Laying Mash

Soybean oil meal, corn meal, bran, red dog, brown middlings, ground groats, ground oats, fish meal, alfalfa leaf meal, milk, meat scraps, bone meal, calcium carbonate, salt and tested oil.

Merrimack Milk Ration Sweetened

Bran, middlings, gluten feed, gluten meal, linseed oil meal, soybean oil meal, cottonseed, ground oats, corn meal, dried brewers grains, molasses, bone meal, calcium carbonate, salt, distillers' grains.

Merrimack Special Mash

Soybean oil meal, brown middlings, corn meal, alfalfa leaf meal, bran, ground oats, meat scraps, fish meal, calcium carbonate, salt and tested oil.

Merrimack Super Mash

Soybean oil meal, corn meal, ground oat groats, white middlings, brown middlings, bran, meat scraps, fish meal, dry milk, edible bone meal, alfalfa leaf meal, salt, calcium carbonate and tested oil.

Middlesex Farm Bureau Federation, Inc.**Farm Bureau Brand All Mash Laying**

Yellow corn meal, wheat bran, standard middlings, ground oats, skimmed milk, alfalfa leaf meal, meat scraps 50%, fish meal 58%, oyster shell meal, sardine oil and cod liver oil, salt.

Farm Bureau Brand All Mash Developer

Yellow corn meal, wheat bran, wheat flour middlings, ground oats, ground barley, alfalfa leaf meal, soy bean oil meal 41%, skimmed milk, meat scraps 50%, fish meal 58%, oyster shell meal, sardine oil and cod liver oil, salt.

Farm Bureau Brand Dairy Ration 24%

Corn meal, ground oats, wheat bran, corn distillers' grain, cottonseed meal 41%, soybean oil meal 41%, corn gluten feed, linseed oil meal, oyster shell meal, salt, cane molasses.

Farm Bureau Brand Dairy Ration 16%

Corn meal, ground oats, wheat bran, corn distillers' grain, cottonseed meal 41%, soybean oil meal 41%, corn gluten feed, linseed oil meal, ground barley, oyster shell meal, salt, cane molasses.

Farm Bureau Brand Developer Mash

Corn meal, ground oats, pulverized oats, wheat bran, soybean oil meal 41%, corn gluten meal, salt, alfalfa leaf meal, sardine oil, cod liver oil, standard middlings, flour middlings, meat scraps 50%, skimmed milk, oyster shell meal.

Farm Bureau Brand Laying Mash 20%

Corn meal, ground oats, wheat bran, soy bean oil meal 41%, salt, alfalfa leaf meal, sardine oil, cod liver oil, flour middlings, meat scraps 50%, fish meal 58%, skimmed milk, oyster shell flour.

Farm Bureau Brand Laying Mash (without Milk)

Corn meal, ground oats, wheat bran, soy bean meal 41%, corn gluten meal, salt, alfalfa leaf meal, sardine oil and cod liver oil, standard middlings, meat scraps 50%, fish meal 58%, ground barley, oyster shell meal.

Farm Bureau Brand Laying Mash 17%

Corn meal, ground oats, wheat bran, salt, alfalfa leaf meal, sardine oil and cod liver oil, flour middlings, meat scraps 50%, fish meal 58%, skimmed milk, oyster shell meal.

Farm Bureau Brand Starter & Broiler

Corn meal, pulverized oats, wheat bran, corn gluten meal, salt, alfalfa leaf meal, sardine oil, cod liver oil, standard middlings, meat scraps 50%, flour middlings, fish meal 58%, skimmed milk, ground oat groats, oyster shell meal.

Geo. O. Moon & Co., Inc.

Special A Dairy 20% Ratlon

Corn gluten feed, corn distillers grains, rye distillers grains, cottonseed meal, o. p. linseed oil meal, wheat bran (with ground screenings not to exceed mill run), soybean oil meal, peanut oil meal, hominy feed, calcium carbonate, salt, molasses.

Moon's 20% Dairy Feed with Molasses

Alfalfa meal, cocoa bean residue meal, hominy feed, soybean oil meal, corn gluten feed, ground and bolted clipped oat by-product, rye distillers grains, corn distillers grains, o. p. linseed oil meal, cottonseed meal, wheat bran (with ground screenings not to exceed mill run), calcium carbonate, salt, molasses, ground oats, ground screenings from wheat, ground barley, peanut oil meal.

Moon's Special A Laying Mash

Hominy feed, corn meal, alfalfa meal, meat scrap, wheat bran and wheat middlings (with ground screenings not to exceed mill run), pulverized oats, fish meal, corn gluten feed, dried skim milk, dried buttermilk, calcium carbonate, salt, cod liver oil, ground barley, soybean oil meal, and V. D. (honey locust bean meal, aniseed, pure crushed flaxseed, dried albumen of milk, codfish residue meal, selected blood flour, cocoa, foenugreek seed, potassium iodide, cod liver oil, rice polish, wheat flour middlings, choice cottonseed meal, coconut oilcake meal, soybean oilcake meal, special steamed bone meal, linseed oilmeal, salt).

U. S. 24% Dairy Ration

Corn gluten feed, rye distillers grains, corn distillers grains, hominy feed, corn meal, soybean oil meal, peanut oil meal, o. p. linseed oil meal, cottonseed meal, alfalfa meal, wheat bran (with ground screenings not to exceed mill run), ground grain screenings, ground and bolted clipped oat by-product, cocoa bean residue meal, calcium carbonate, salt, molasses, ground barley.

U. S. Drought Ration

Corn gluten feed, rye distillers grains, corn distillers grains, soybean oil meal, cottonseed meal, peanut oil meal, alfalfa meal, ground and bolted clipped oat by-product, wheat bran (with ground screenings not to exceed mill run), cocoa bean residue meal, salt, calcium carbonate, steamed bone meal, molasses, ground barley, ground oats, ground screenings from wheat.

Ogden Grain Co.

Ograinco Milk Ration

Corn distillers dried grains, corn gluten feed, soybean oil meal, cotton seed meal, corn meal or hominy, wheat bran, ground wheat screenings, cane molasses, salt, calcium carbonate, o. p. linseed oil meal.

Pilgrim Growing Mash

Alfalfa meal, dried skim milk, meat scraps, fish meal, wheat middlings, wheat bran, pulverized oats, corn meal, oyster shell meal, salt, cod liver oil.

Pilgrim Special Laying Mash

Alfalfa meal, pulverized oats, meat scraps, fish meal, soybean oil meal, corn meal, ground wheat, wheat bran, wheat middlings (may contain mill run screenings), salt, oyster shell meal, cod liver oil, dried skim milk.

Pilgrim All Purpose Complete Ration

Alfalfa meal, pulverized oats, meat scraps, dried skim milk, fish meal, corn meal, wheat middlings, wheat flour middlings (may contain screenings not exceeding mill run), bone meal, cod liver oil, calcium carbonate, Kelco meal.

Pilgrim "Cackle" 20% Laying Mash

Alfalfa meal, pulverized oats, meat scraps, fish meal, gluten meal, dried skim milk, corn meal, soybean oil meal, wheat bran, wheat middlings, calcium carbonate, cod liver oil, salt, potassium iodide, "Vitamin".

Pilgrim 16% Dairy Feed

Corn gluten feed, hominy feed or corn meal, wheat bran, dried brewers grains, ground wheat screenings, cane molasses, calcium carbonate, salt.

Pilgrim Laying Mash

Alfalfa leaf meal, pulverized oats, meat scraps, fish meal, dried skim milk, semi-solid buttermilk, gluten meal, soybean oil meal, corn meal, wheat bran, wheat middlings, calcium carbonate, cod liver oil.

Thrift 20% Dairy Feed

Soybean oil meal, corn gluten feed, old process linseed oil meal, gluten meal, corn meal, low fibre ground oats, cotton seed meal, standard wheat bran, standard wheat middlings, ground wheat screenings, molasses, calcium carbonate, salt.

Park & Pollard Co.

Bidwell 20% Dairy Ration

Wheat bran, linseed oil meal, malt sprouts, gluten feed, ground oats, gluten meal, soybean oil meal, ground barley, cottonseed meal, ground grain screenings from wheat, oats, barley, buckwheat and milo, molasses, calcium carbonate and salt.

Bidwell Laying Mash

Dried buttermilk, alfalfa meal, corn meal, wheat bran (may contain mill run wheat screenings), wheat middlings, fish meal, meat, bone, linseed oil meal, corn gluten meal, soybean oil meal, calcium carbonate, salt and ground: wheat, oats, barley, kaffir corn and buckwheat, vitamin tested cod liver oil.

Doublex 24% Dairy Ration

Wheat bran, linseed oil meal, soybean oil meal, ground oats, malt sprouts, corn gluten meal cottonseed meal, corn gluten feed, ground grain screenings from wheat, oats, barley, buckwheat and milo, molasses, calcium carbonate and salt.

Doublex 16% Dairy Ration

Corn distillers grains, ground oats, ground barley, brewers dried grains, malt sprouts, linseed oil meal, cottonseed meal, ground grain screenings from wheat, oats, barley, buckwheat and milo, soybean oil meal, corn gluten feed, molasses, calcium carbonate and salt.

Park & Pollard Growing Feed

Dried buttermilk, alfalfa leaf meal, iodol fish meal, linseed oil meal, meat and bone meal, wheat bran (may contain mill run wheat screenings), wheat middlings, corn gluten meal, calcium carbonate, salt, ground: corn, wheat, oats, barley and buckwheat, vitamin tested cod liver oil.

Lay or Bust Dry-Mash

Dried buttermilk, alfalfa leaf meal, corn gluten meal, iodol fish meal, meat, bone, linseed oil meal, soybean oil meal, wheat bran (may contain mill run wheat screenings), wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn and buckwheat, vitamin tested cod liver oil.

Manamar Lay or Bust Dry-Mash

Kelp, Pacific Coast fish meal and marine sea shells, dried buttermilk, alfalfa leaf meal, corn gluten meal, meat, bone, linseed oil meal, soybean oil meal, wheat bran (may contain mill run wheat screenings), wheat middlings, calcium carbonate, salt, ground: corn, wheat, oats, barley, kaffir corn and buckwheat, vitamin tested cod liver oil.

George H. Parker Grain Co.**Parker's Egg Mash**

Yellow corn meal, wheat bran, wheat middlings, ground oats, dried skimmed milk, meat scraps, fish meal, alfalfa leaf meal, soya bean meal, edible bone meal, calcium carbonate, charcoal, vitamin tested cod liver oil and salt.

Parker's Special Dairy Ration

Wheat bran, yellow corn meal, hominy, old process linseed meal, soy bean meal, oat feed, corn gluten feed, cottonseed meal, molasses, calcium carbonate, steamed bone meal and salt.

Phaneuf & Son**O-Boy Egg Mash**

Ground yellow meal and ground oats, fish meal, soybean oil meal, meat scraps, milk sugar feed or dried whey (feeding), corn gluten meal, standard wheat middlings, wheat bran, coconut oil meal, dried tomato pulp, crab meal, alfalfa leaf meal. Essential minerals — (calcium carbonate, calcium phosphate, calcium sulphate, iron sulphate, sulphur, iodine and salt), cod liver oil.

W. N. Potter Grain Stores, Inc.**A.D.P. 24% Dairy Ration**

Ground corn, hominy, cottonseed meal, corn gluten meal, wheat bran, ground oats, oilmeal, calcium carbonate, bone meal and salt.

Potter's Sweetened Dairy Ration

Gluten feed, hominy, linseed oilmeal, ground oats, wheat bran, std. wheat middlings, cottonseed meal, corn distillers grains, molasses, calcium carbonate, bone meal and salt.

H. C. Puffer Co.**Egg-Em-On Growing Feed**

Corn feed meal, corn gluten feed, ground barley, feeding oatmeal, soy bean meal, wheat bran, wheat middlings, meat scraps, fish meal, dried milk, alfalfa meal, cod liver oil, salt, calcium carbonate.

Egg-Em-On Laying Mash

Dried milk, dried fish, meat scraps, wheat bran and wheat middlings (not exceeding mill run of screenings), corn feed meal, corn gluten feed, feeding oatmeal, soy bean meal, linseed meal, alfalfa meal, cod liver oil, small percentage salt and calcium carbonate.

Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, soy bean meal, ground oats, corn feed meal or hominy meal, wheat bran and wheat middlings (not exceeding mill run of screenings), small percentage salt and calcium carbonate.

Sweetened Producer Dairy Feed

Linseed oil meal, cotton seed meal, corn gluten feed, soy bean meal, corn feed meal or hominy meal, wheat bran (not exceeding mill run of screenings), oat feed, molasses, small percentage salt and calcium carbonate.

Quaker Oats Co.**Big Egg Laying Mash**

Hominy feed, yellow hominy feed, wheat bran, wheat standard middlings, ground oats, fish meal, soybean oil meal, meat scraps, sardine oil, dried skimmed milk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Quaker 24% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley feed, cottonseed meal, corn gluten feed, soybean oil meal, wheat bran, wheat standard middlings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, 1% bone meal, molasses.

Quaker 20% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley feed, cottonseed meal, corn gluten feed, soybean oil meal, wheat bran, wheat standard middlings, oat mill feed (Oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, 1% bone meal, molasses.

Quaker 16% Protein Dairy Ration

Hominy feed, yellow hominy feed, barley feed, cottonseed meal, soybean oil meal, corn gluten feed, wheat bran, wheat standard middlings, ground oat screenings, oat mill feed (oat hulls, oat shorts, oat middlings), $\frac{3}{4}$ of 1% salt, 1% iodized ground limestone, 1% bone meal, molasses.

Quaker Ful-O-Pep Egg Mash

Oatmeal, hominy feed, yellow hominy feed, wheat bran, wheat standard middlings, barley meal, fish meal, cod liver meal, meat scraps, sardine oil, dried skimmed milk, dried buttermilk, molasses, alfalfa meal, $\frac{3}{4}$ of 1% salt.

Ralston Purina Co.**Protena 24% Dairy Feed**

Linseed meal, soy bean oil meal, cottonseed meal, alfalfa meal, corn gluten feed, wheat middlings (standard), wheat bran, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Protena 20% Dairy Feed

Linseed meal, soy bean oil meal, cottonseed meal, corn gluten feed, wheat middlings (standard), alfalfa meal, wheat bran, ground grain screenings (from wheat, corn, oats, barley, kafir), molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Protena 16% Dairy Feed (Buffalo Mill)

Linseed meal, soy bean oil meal, gluten feed, alfalfa meal, wheat middlings (standard), cottonseed meal, molasses, ground grain screenings (from wheat, corn, oats, barley, kafir), wheat bran, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Laying Mash

Meat scrap, soy bean oil meal, linseed meal, corn meal, dried buttermilk, cod liver oil, sardine oil, alfalfa meal, wheat middlings (standard), wheat bran, 4% calcium carbonate (limestone), 1% salt.

Purina Broiler Chow

Pur-A-Tene (Carotene), cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, dried buttermilk, alfalfa leaf meal, corn meal, ground oats, wheat middlings, (standard), wheat bran, alfalfa meal, 1 $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Chick Growena

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, wheat germ, alfalfa meal, corn meal, beet pulp, grey wheat middlings, wheat bran, 1 $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Chick Startena

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, alfalfa leaf meal, wheat germ, linseed meal, corn germ meal, oat middlings, corn meal, wheat bran, grey wheat middlings, 1 $\frac{1}{2}$ % calcium carbonate (limestone), $\frac{1}{2}$ % iodized salt.

Purina Chicken Fatena

Ground oats, corn meal, ground barley, corn germ meal, wheat flour (second clear), grey wheat middlings, soy bean oil meal, meat scrap, rolled oats, $\frac{1}{2}$ % iodized salt.

Purina Chicken Fatena Checkers

Dried skim milk, ground oats, corn meal, ground barley, meat scrap, soy bean oil meal, wheat middlings (grey), molasses, $\frac{1}{2}$ % iodized salt.

Purina Egg Chowder

Pur-A-Tene (Carotene), cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, dried buttermilk, wheat middlings (standard), wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Growing Chow

Pur-A-Tene (Carotene), cod liver oil, sardine oil, meat scrap, fish meal, soy bean oil meal, wheat germ, dried buttermilk, corn germ meal, grey wheat middlings, wheat bran, alfalfa meal, corn meal, 3% calcium carbonate (limestone), 1% iodized salt.

Purina Lay Chow

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, linseed meal, alfalfa meal, corn germ meal, wheat middlings (standard), wheat bran, corn meal, 1% iodized salt, 3% calcium carbonate (limestone).

Purina Layena (Complete Ration)

Pur-A-Tene (Carotene), dried buttermilk, cod liver oil, sardine oil, meat scrap, soy bean oil meal, alfalfa meal, wheat middlings (standard), beet pulp, corn meal, $\frac{1}{2}$ % iodized salt, 4% calcium carbonate (limestone).

Purina Milking Cow Chow (24%)

Linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, distillers' corn dried grains, brewers' dried grains, wheat middlings (standard), wheat bran, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Milking Cow Chow (20%)

Dried beet pulp, linseed meal, soy bean oil meal, corn gluten feed, cottonseed meal, distillers' corn dried grains, brewers' dried grains, wheat middlings (standard), wheat bran, corn meal, alfalfa meal, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

Purina Milking Cow Chow (16%)

Linseed meal, soy bean oil meal, corn gluten feed, crushed oats, ground barley, cottonseed meal, distillers' corn dried grains, brewers' dried grains, wheat middlings (standard), wheat bran, corn meal, alfalfa meal, dried beet pulp, molasses, 2% calcium carbonate (limestone), 1% iodized salt.

D. F. Riley**Riley's Chick & Broiler Ration**

Corn meal, wheat bran, flour middlings, dried skim milk, beef scraps, oil meal, feeding oat meal, ground limestone, alfalfa leaf meal, salt, XX cod liver oil.

Riley's 20% Dairy Ration

Gluten feed, wheat middlings, linseed oil, 41% cottonseed meal, wheat bran, dried brewer grains, corn meal or hominy, bone meal, salt.

Riley's Laying Mash

Wheat middlings, wheat bran, yellow corn meal, gluten feed, ground oats, beef scraps, fish meal, dried skim milk, o. p. oil meal, alfalfa leaf meal, calcium carbonate, salt, fortified cod liver oil.

Ryther & Warren**Blue Tag Dairy Ration**

41% cottonseed meal, old process linseed oil meal, corn gluten feed, hominy feed (or corn meal), pure wheat bran, wheat middlings, ground oats, corn distillers grains, dried beet pulp, calcium carbonate and salt.

Minot Complete Laying Mash

Corn meal, pure wheat bran, wheat middlings, ground oats, alfalfa leaf meal, meat scraps, fish meal, dried milk, cod liver meal, shell meal and salt.

Minot Milk Egg Mash

Corn meal, pure bran, flour middlings, ground oats, meat scraps 50% pro., fish meal, 55% pro., alfalfa leaf meal, powdered milk, corn gluten meal, shell flour, salt and fortified cod liver oil.

Minot Special Dairy Ration

Wheat bran, ground oats, gluten feed, cottonseed meal (41 per cent), soy bean meal, hominy feed or corn meal, corn distillers grains, dried brewers grains, calcium carbonate and salt.

Minot Poultry Mash

Wheat bran, wheat middlings, red dog middlings, corn meal, gluten feed, alfalfa meal, ground oats, meat scraps, fish meal and salt.

St. Albans Grain Co.**Hygrade 20 Milk Ration**

Old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn gluten meal, corn gluten feed, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, cane molasses, calcium carbonate and dairy salt.

Hygrade 24 Milk Ration

Corn gluten meal, corn gluten feed, old process linseed meal, soybean oil meal, cottonseed meal, brewers' dried grains, corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, calcium carbonate, dairy salt and cane molasses.

Utility 20 Dairy Ration

Old process linseed meal, soybean oil meal, corn gluten feed, cottonseed meal, corn meal, hominy feed, ground oats, ground barley, brewers' dried grains, oat meal mill by-products, (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, cane molasses and dairy salt.

Utility 16 Dairy Ration

Old process linseed meal, corn gluten meal, corn gluten feed, cottonseed meal, yellow corn meal, hominy feed, ground oats, ground barley, brewers' dried grains, oat meal mill by-products (oat middlings, oat shorts, oat hulls), wheat bran, wheat middlings, calcium carbonate, cane molasses and dairy salt.

Wirthmore Baby Chick Starter

Cod liver oil, dried skim milk, dried whey (milk sugar feed), alfalfa leaf meal, fish meal, meat scraps, corn gluten meal, soybean oil meal, pure wheat bran, pure wheat middlings, ground oat groats, ground wheat, yellow corn meal, calcium carbonate and salt.

Wirthmore 25 Balanced Ration

Corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, ground barley, ground oats, cottonseed meal, corn gluten feed, yellow corn meal, wheat middlings, wheat bran, edible bone meal, cane molasses and dairy salt.

Wirthmore Breeder Mash

Cod liver oil, dried skim milk, dried whey (milk sugar feed), liver meal, meat scraps, fish meal, yellow corn meal, alfalfa leaf meal, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, pulverized oats and barley, calcium carbonate and salt.

Wirthmore Complete Chick Starter & Broiler Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), ground oat groats, meat scraps, fish meal, alfalfa leaf meal, corn gluten meal, soybean oil meal, yellow corn meal, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore Complete Growing Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, soybean oil meal, corn gluten meal, ground yellow corn, ground wheat, ground oats, ground barley, wheat bran, wheat middlings, alfalfa leaf meal, calcium carbonate and salt.

Wirthmore Complete Laying Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), liver meal, meat scraps, fish meal, whole oat groats, ground yellow corn, ground oats, alfalfa leaf meal, ground wheat, wheat bran, wheat middlings, calcium carbonate and salt.

Wirthmore 20 Dairy Ration

Fortified cod liver oil, corn gluten meal, corn distillers' dried grains, old process linseed meal, soybean oil meal, cottonseed meal, corn gluten feed, yellow corn meal, ground oats, ground barley, wheat middlings, wheat bran, edible bone meal, cane molasses and dairy salt.

Wirthmore Dairy Feed with Beet Pulp

Dried beet pulp, cottonseed meal, old process linseed meal, soybean oil meal, wheat bran, wheat middlings, corn gluten feed, yellow corn meal, ground oats, edible bone meal, cane molasses and dairy salt.

Wirthmore 16 Dairy Ration

Fortified cod liver oil, corn gluten meal, corn distillers' dried grains, corn gluten feed, old process linseed meal, soybean oil meal, yellow corn meal, hominy feed, ground oats, ground barley, wheat bran, wheat middlings, cottonseed meal, calcium carbonate, cane molasses, steamed bone meal and dairy salt.

Wirthmore Duck Breeder's Laying Ration

Yellow corn meal, wheat bran, wheat middlings, wheat flour, ground oat groats, meat scraps, fish meal, alfalfa leaf meal, calcium carbonate and salt.

Wirthmore Fleshing Pellets

Dried skim milk, meat scraps, soybean oil meal, corn germ meal, feeding oat meal, wheat bran, wheat middlings, wheat red dog flour, yellow corn meal, alfalfa meal, calcium carbonate, salt, cod liver oil, molasses.

Wirthmore Laying Mash

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, yellow corn meal, alfalfa meal, soybean oil meal, corn gluten meal, wheat bran, wheat middlings, ground wheat, oats, barley, buckwheat, calcium carbonate and salt.

Wirthmore Laying Pellets

Cod liver oil, dried skim milk, dried whey (milk sugar feed), soybean oil meal, fish meal, meat scraps, feeding oatmeal, yellow corn meal, pulverized oats, ground wheat, wheat bran, wheat standard middlings, wheat flour middlings, alfalfa leaf meal, calcium carbonate and salt.

Wirthmore Turkey Fattening Ration

Dried skim milk, dried whey (milk sugar feed), meat scraps, corn gluten meal, alfalfa meal, yellow corn meal, fine ground oats, barley, wheat, wheat bran, wheat middlings, wheat flour middlings and salt.

Wirthmore Turkey Growing Ration

Cod liver oil, dried skim milk, dried whey (milk sugar feed), meat scraps, fish meal, soybean oil meal, corn gluten meal, alfalfa meal, yellow corn meal, fine ground oats, barley, wheat, wheat bran, wheat middlings, wheat flour middlings, calcium carbonate and salt.

Squier & Co.**Squiers Buttermilk Egg Mash**

Dried buttermilk, meat scrap, fish meal, bone meal, corn gluten feed, alfalfa meal, wheat bran, wheat middlings, corn meal, ground oats, soybean oil meal, calcium phosphate and salt.

C. H. Symmes & Co.**The Ideal Dairy Ration**

Wheat middlings, wheat bran, brewers grains, cottonseed meal, linseed meal, gluten meal, gluten feed, corn meal or white hominy, molasses, salt, bone meal, calcium carbonate, ground barley.

Tioga Mills, Inc.**E-Gee 20% Dairy Feed**

Wheat bran, peanut oil meal, corn gluten feed, wheat middlings, cane molasses, cottonseed meal, salt, phosphate of lime, charcoal, potassium iodide, corn distillers grains, palm kernel oil meal, ground barley, malt sprouts. (Wheat bran and wheat middlings may contain ground screenings not exceeding mill run).

United Cooperative Farmers, Inc.**United Farmers Growing Mash**

Coarse No. 2 yellow corn meal, wheat bran, wheat flour midds, pulverized 38 lb. white oats, meat scraps 50%, fish meal 55%, dried skim milk, alfalfa leaf meal, oyster shell flour, high grade cod liver oil, salt.

United Farmers Milk Egg Mash

No. 2 yellow meal — Attrition, standard wheat bran, wheat flour midds, pure pulverized oats (No. 2-38 lb. clipped-unsul.), meat scraps 50%, alfalfa leaf meal, dried buttermilk, oyster shell meal, high grade cod liver oil, salt, fish meal 55%.

United Farmers Milkmaker

Choice yellow hominy, 38 lb. ground oats, standard or pure bran, choice cottonseed 41%, oil meal pure, corn gluten feed, soya bean meal, molasses, corn distillers' grains, steamed bone meal, calcium carbonate, salt.

United Farmers Milk Pep

Cottonseed 41%, o. p. oil meal, yellow hominy, corn gluten feed, pure ground oats 38 lb., soybean meal, standard or pure bran, cane molasses, corn distillers' grains, bone meal, calcium carbonate, salt.

United Farmers Starting & Growing Mash

No. 2 yellow corn meal (attrition), wheat flour middlings, standard wheat bran, ground oats pulverized, pure dried buttermilk, alfalfa leaf meal, pure fish meal 55%, meat scraps 50%, oyster shell flour, salt, high grade cod liver oil.

Unity Feeds, Inc.**Paycheck 24% Dairy Ration**

Distillers dried grains, corn gluten feed, soya bean oil meal, ground corn, ground oats, wheat and bran processed, cottonseed meal, palm kernel meal, molasses, calcium carbonate and salt.

Paycheck 20% Dairy Ration

Distillers dried grains, corn gluten feed, soya bean oil meal, wheat and wheat bran processed, cottonseed meal, palm kernel meal, ground corn, ground oats, molasses, calcium carbonate and salt.

Unity Complete Starting and Broiler Mash

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, fish meal, meat scraps, ground wheat, ground barley, corn meal, ground oats, wheat bran, wheat middlings, calcium carbonate and salt.

Unity Growing Mash

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, soya bean meal, fish meal, meat scraps, linseed oil meal, wheat bran, wheat middlings, ground oats, ground wheat, corn meal, calcium carbonate and salt.

Unity Laying Mash

Dried buttermilk, vitamin tested cod liver oil, alfalfa leaf meal, soya bean meal, fish meal, meat scraps, linseed oil meal, wheat bran, wheat middlings, ground oats, ground wheat, corn meal, calcium carbonate and salt.

C. P. Washburn Co.**"Made Right" Balanced Ration**

Cottonseed meal, linseed oil meal, corn gluten, wheat bran, corn meal, oat feed, beet pulp, charcoal, calcium carbonate, salt, bone meal, ground oats, soya bean meal, brewers grain.

"Made Right" Complete Broiler Ration

Fortified cod liver oil, dried milk, corn meal, bran, middlings, oat meal, high grade meat scraps, fish meal, ground wheat, soya bean meal, gluten, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, minerals, iron oxide, iodine.

"Made Right" Complete Layer

Fortified cod liver oil, dried milk, corn meal, bran, middlings, oat meal, high grade meat scraps, fish meal, ground wheat, soya bean meal, gluten, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, minerals, iron oxide, iodine.

"Made Right" Sweet Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, linseed oil meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grain.

"Made Right" 16% Dairy Feed

Corn meal, wheat meal, ground oats, cottonseed meal, wheat bran, soya bean meal, gluten, molasses, bone meal, calcium carbonate, salt, brewers grain.

"Made Right" Dry Mash

Corn meal, wheat bran, wheat middlings, red dog, 2nd clear flour, ground oat meal, linseed oil meal, gluten feed, soya bean meal, ground wheat, meat scraps, fish meal, dried milk, alfalfa leaf meal, molasses, charcoal, calcium carbonate, salt, cod liver oil, calcium phosphate, minerals iron oxide, iodine.

"Made Right" Starting & Growing Feed

Corn meal, wheat bran, wheat middlings, oat meal, gluten meal, red dog, 2nd clear flour, meat scraps, ground wheat, soya bean meal, fish meal, dried milk, alfalfa leaf meal, molasses, calcium carbonate, charcoal, salt, cod liver oil, calcium phosphate, minerals, iron oxide, iodine.

Wayne County Grangers Feed Corp.**Clyde 20% Dairy Feed**

Corn distillers grains, corn gluten feed, ground oats, brewers grains, hominy feed or corn meal, cottonseed meal, wheat bran (may contain screenings), malt sprouts, soybean oil meal, cane molasses, ground limestone, salt, steamed bonemeal.

H. K. Webster Co.**Blue Seal Beet Pulp Dairy Ration**

Beet pulp, soy bean oil meal, gluten meal, malt sprouts, wheat bran, oat feed, choice cottonseed meal, peanut skins, germs and meal, hominy feed, brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bonemeal, calcium carbonate, dicalcium phosphate, potassium iodide, and salt).

Blue Seal Breeders' Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, ground fancy wheat, fine ground heavy oats, ground rolled oats, ground barley, corn gluten meal, 50% meat scraps, dried skim milk, 55% codfish meal, alfalfa leaf meal, salt, calcium carbonate, cod liver oil.

Blue Seal Chick Builder

High grade meat scraps, dried skim milk, alfalfa leaf meal, corn gluten meal, yellow corn meal pure wheat bran, pure wheat middlings, fine ground oats, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Chick Starter

Coarse ground No. 2 yellow corn, fine ground heavy oats, ground barley, corn gluten meal, pure wheat bran, wheat flour middlings, 60% meat scraps, 65% fish meal vacuum process, dried skim milk, alfalfa leaf meal, calcium carbonate, salt, cod liver oil.

Blue Seal College Mash

No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, 50% meat scraps, 55% codfish meal, alfalfa leaf meal, dried skim milk, calcium carbonate, salt, with cod liver oil added.

Blue Seal "Sixteen" Dairy Ration

Fancy crushed oats, ground oats, linseed oil meal (pea sized), soy bean oil meal (pea sized), ground barley, hominy feed, wheat bran, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, potassium iodide, and salt).

Blue Seal "20" Dairy Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, corn oil meal, gluten feed, choice cottonseed meal, hominy feed, wheat bran, corn distillers' grains, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, potassium iodide and salt).

Blue Seal Egg Mash

Yellow corn meal, fine ground heavy oats, pure wheat bran, pure wheat middlings, meat scraps, dried skim milk, alfalfa leaf meal, P. R. cane molasses, gluten meal, calcium carbonate, salt, cod liver oil.

Blue Seal Growing Mash

Dried skim milk, meat scraps, 55% codfish meal, alfalfa leaf meal, corn gluten meal, No. 2 yellow corn meal, pure wheat bran, wheat flour middlings, fine ground heavy oats, ground barley, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Hom-Mix 24% Dairy Ration

Choice cottonseed meal, soy bean oil meal, malt sprouts, corn oil meal, corn gluten meal, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate and salt).

Blue Seal Improved All-Mash Ration

Coarse ground No. 2 yellow corn, ground fancy wheat, fine ground heavy oats, pure wheat bran, wheat flour middlings, meat scraps, 55% codfish meal, dried skim milk, alfalfa leaf meal, P. R. cane molasses, calcium carbonate, salt, cod liver oil.

Blue Seal Improved Balanced Ration

Old process linseed oil meal, soy bean oil meal, ground oats, malt sprouts, corn gluten meal, choice cottonseed meal, hominy feed, wheat bran, corn distillers' grains, dried brewers' grains, corn oil meal, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, potassium iodide and salt).

Blue Seal Laying Mash

No. 2 yellow corn meal, pure wheat bran, fine ground heavy oats, meat scraps, corn gluten meal, wheat flour middlings, ground barley, ground fancy wheat, P. R. cane molasses, alfalfa leaf meal, dried skim milk, 55% codfish meal, salt, calcium carbonate, cod liver oil.

Blue Seal Special 20% Dairy Ration

Choice cottonseed meal, soy bean oil meal, corn oil meal, malt sprouts, gluten feed, oat feed, wheat bran, hominy feed, peanut skins, germs and meal, linseed oil meal, dried brewers' grains, corn distillers' grains, P. R. cane molasses, B. S. mineral mixture (white fish meal, edible bone meal, calcium carbonate, dicalcium phosphate, potassium iodide and salt).

Est. M. G. Williams

Williams' Balanced Ration

Corn meal or hominy, linseed oil meal, cotton seed meal, ground oats, gluten feed, dried brewers' grains, wheat feed, soy bean meal, calcium carbonate and 1% salt.

Williams' Growing Feed

Corn meal, bran, soy bean meal, feeding oatmeal, dried skim milk, leaf meal, fish meal, meat scraps, calcium carbonate, salt and cod liver oil.

Williams' Laying Mash

Corn meal, bran, middlings, ground oats, meat scraps, fish meal, leaf meal, dried skim milk, calcium carbonate, salt and cod liver oil.

Stanley Wood Grain Co.

Bliss Dairy Ration

Corn meal (or hominy), cottonseed meal, wheat bran, soybean meal, linseed meal, wheat middlings, gluten meal, gluten feed, table salt, edible bonemeal, calcium carbonate, (beet pulp).

Preferred Startling & Growing Feed

Pure dried skim milk, dried fish meal, yellow corn meal, wheat bran, wheat middlings, fine ground oatmeal, alfalfa leaf meal, beef scraps, edible bonemeal, table salt, calcium carbonate.

Woods Dairy Ration

Cottonseed meal, wheat middlings, yellow corn meal (or hominy), soybean meal, ground oats, old process linseed oil meal, corn gluten feed, dried beet pulp, wheat bran, salt, calcium carbonate.

Average Analyses of Unmixed By-Products
(Collected between September 1, 1936 and April 1, 1937)

	Num- ber of Samples	Water (Per- cent)	Protein (Per- cent)	Fat (Per- cent)	Nitro- gen Free Extract (Per- cent)	Fiber (Per- cent)	Ash (Per- cent)

Directory of manufacturers who registered fertilizers for sale in Massachusetts in 1937	47

MANUFACTURERS AND BRANDS

Registrations have been perfected in Massachusetts during 1937 by 94 firms, covering 497 brands of mixed fertilizer and unmixed fertilizing materials. The nature of these products is shown by the following classification:

Complete fertilizers	303
Ammoniated superphosphates	3
Superphosphates with potash	1
Dry ground fish, tankage and ground bone	45
Fertilizer simples, including organic nitrogen compounds	96
Tobacco stems	1
Pulverized manures	32
Cotton hull ashes and wood ashes	7
Peat products	3
Stone meal	1
Nitrate of potash	5
Total	497

¹Assisted by H. Robert DeRose, John W. Kuzmeski, Albert F. Spelman, Stuart P. Stiles, Chemists; Louis A. Graves, C. L. Whiting, G. E. Taylor, Sampling Agents; Harry L. Allen, Laboratory Assistant; Cora B. Grover, Clerk.

The following brands were not found on display by the sampling agents at any point in the state and therefore do not appear in the tables of analyses.

Brands of Fertilizer Registered but Not Sampled

Acme Guano Co. Sergent's 4-6-10 Sergent's 4-8-6	Eastern States Farmers' Exchange Eastern States Castor Pomace (4.5-0-0)
Apothecaries Hall Co. Liberty Fertilizer 8-15-16 Liberty Onion Special (Potash as Sulfate) 4-8-7 Liberty Potato and Vegetable 2-8-10 Castor Pomace (4.52-0-0) Linseed Meal (5-0-0)	Humphreys-Godwin Co. Bull Brand Cottonseed Meal (6.87-0-0)
Armour Fertilizer Works Armours Vert Plant Food 5-8-6 Fish (9.46-5-0)	International Agricultural Corp. International 4-10-6
Berkshire Chemical Co. Berkshire Complete Tobacco Fertilizer 5-3-5 Berkshire 5-8-10	Spencer Kellogg & Sons, Inc. Castor Pomace (4.52-0-0)
Chilean Nitrate Sales Corp. Old Style Chilean Nitrate of Soda (16-0-0)	Old Deerfield Fertilizer Co., Inc. Cotton Hull Ashes (0-0-30) Linseed Meal (5.44-0-0)
Consolidated Rendering Co. Superphosphate (0-20-0)	Olds & Whipple, Inc. O & W 5-8-10 Fertilizer
	Rogers & Hubbard Co. Red H 8-16-14 with Sulfate of Potash
	Standard Wholesale Phosphate and Acid Works, Inc. Standard 4-8-8 Standard 5-8-10

Drawing of Samples

Between April 1 and June 14, three sampling agents made a thorough canvass of the state: Louis A. Graves in Hampshire, Hampden, Franklin and Berkshire Counties; G. E. Taylor in Norfolk, Bristol, Plymouth, Barnstable and Dukes Counties; and C. L. Whiting in Essex, Middlesex, Suffolk and Worcester Counties. They visited 191 towns, took 1,697 samples, representing 494 brands, from stock in the possession of 480 agents or owners, and called upon 356 agents where no samples were drawn because the agency had been discontinued, the stock was all sold out, or sufficient samples had already been taken of the brands found. They sampled 19,246 sacks, representing 16,486 tons of fertilizer. One ton was sampled to every four and one-half tons sold in the state.

COMPARATIVE COST OF FERTILIZER CHEMICALS AND UNMIXED FERTILIZER PRODUCTS

Ammonium sulfate, nitrate of soda, and calcium nitrate have shown a moderate advance in price during 1937. Nitrate of potash has shown a marked increase in price over the preceding year and, most likely due to war conditions in Spain and in China, the salt has been largely absorbed by munition manufacturers so that its present price almost prohibits its use as a fertilizer.

Cyanamid and urea continue to be the cheapest source of organic nitrogen, the former showing a constant advance in price and the latter a \$6.00 decline in price. However, on September 27, the quotations for synthetic urea had increased to about the same as for the six months' average for 1936.

Organic animal ammoniates, dry ground fish, cottonseed meal, and castor pomace have all registered an increase for the six months ending March 1, 1937 as compared with average quotations for a like period in 1936. It should be noted, however, that quotations on dried blood, tankage, and cottonseed meal for September 27 show a considerable decline in price over the six months' average.

Wholesale Quotations on Chemicals and Unmixed Materials

NATURE OF MATERIAL	AVERAGE PRICE PER TON FOR SIX MONTHS PRECEDING MARCH 1		Price Per Ton Sept. 27, 1937	Difference Between Sept. 27 Price and Six Months' Average: Sept. 1, 1936-Mar. 1, 1937
	1936	1937		
Ammonium sulfate (20.5% N), 200 lbs., northern ports	\$25.50	\$24.86	\$27.50	+\$2.64
Nitrate of soda (15.5% N), bags, natural or synthetic ex vessel	25.50	27.33	28.30	+ .97
Nitrate of lime (15% N), bags, northern ports, ex vessel	24.75	26.26	27.50	+ 1.24
Nitrate of potash (13% N, 44% K ₂ O), bags, c.i.f. ports	45.90	52.70	63.20	+10.50
Urea (46% N), car lots, bags, ex vessel	101.88	95.00	101.00	+ 6.00
Cyanamid	-	26.65	29.36	+ 2.71
Dried blood (12.34% N), ground, bulk, New York	45.51	65.27	56.00	- 9.27
Hoof meal (14.15% N), f.o.b. Chicago	46.91	50.93	57.80	+ 6.87
Animal tankage (8.23% N, 6.86% P ₂ O ₅), ground, bulk, New York	30.58	42.05	35.50	- 6.55
Dry ground fish (9.02% N, 6.86% P ₂ O ₅), bags, Baltimore	40.04	51.62	52.00	+ .38
Cottonseed meal (5.75% N), bags, at mill	22.39	31.37	20.50	-10.87
Castor pomace (4.52% N), bags, car lots, f.o.b. works	16.25	19.50	23.00	+ 3.50
Ground bone (2.47% N, 22.88% P ₂ O ₅), bags, f.o.b. Chicago	18.31	20.30	22.00	+ 1.70
Superphosphate (16% avail. P ₂ O ₅), bulk, f.o.b. Baltimore	8.25	8.09	8.50	+ .41
Muriate of potash (50.54% K ₂ O), bags, c.i.f. ports	22.50	25.00	26.75	+ 1.75
High grade sulfate of potash (48.65% K ₂ O), bags, c.i.f. ports	33.75	36.25	38.00	+ 1.75
Potash-magnesia sulfate (25.94% K ₂ O), bags	22.25	24.75	25.75	+ 1.00
Cotton hull ashes (25% K ₂ O), bulk, delivered, car lots	23.28	25.00	26.25	+ 1.25

Fertilizer Trade Values

FORM OF PLANT FOOD	Value per Pound	Unit Value
Nitrogen		
In ammonia salts	\$0.081	\$1.62
In nitrates	.105	2.10
Organic nitrogen in fish	.325	6.50
Organic nitrogen in blood, meat and hoof meal	.275	5.50
Organic nitrogen in fine ¹ bone and tankage	.315	6.30
Organic nitrogen in coarse ¹ bone and tankage, and in pulverized manures	.225	4.50
Organic nitrogen in mixed fertilizers	.245	4.90
Organic nitrogen in cottonseed meal, castor pomace, linseed meal, etc.	.29	5.80
Organic nitrogen in calurea and urea	.115	2.30
Organic nitrogen in cyanamid	.0635	1.27
Phosphoric Acid		
Available (soluble in water and neutral citrate of ammonia)	.05	1.00
In precipitated bone	.0475	.95
In basic slag phosphate	.06	1.20
In fine ¹ bone and tankage, and in fish	.045	.90
In coarse ¹ bone and tankage	.0375	.75
In pulverized manures, seed residues, and ashes	.0375	.75
Insoluble in neutral citrate of ammonia in mixed fertilizers	.016	.32
Potash		
As sulfate	.045	.90
As muriate	.03	.60
As carbonate	.095	1.90
As nitrate	.03	.60
In potash-magnesia sulfate	.057	1.14
In cottonhull and wood ashes (soluble)	.067	1.34
In organic vegetable compounds, sheep manure, insoluble in ashes	.035	.70
Magnesium Oxide		
Water soluble from Kieserite and Emjeo	.0527	1.054
In form of finely ground dolomite	.00625	.125

¹ Fine bone and tankage refers to particles which, as sampled, will pass through a sieve with circular openings 1/50 of an inch in diameter. Coarse bone and tankage refers to that portion which will not pass through the sieve.

Superphosphate, which is the principal source of available phosphoric acid has shown a small decline in price during the season, but has recovered with the advent of the fall trade and is now quoted at 25c per ton above the six months' average for 1936.

The three potash salts quoted have shown an average increase in cost of about 11% over the six months' average for 1936 and on September 27 were showing a considerable increase over the average quotations prevailing for the six months ending March 1, 1937.

From this summary it would not be surprising if a small advance in price of mixed commercial fertilizer prevailed for 1938.

The fertilizer trade values are based on average wholesale quotations of fertilizer chemicals and unmixed materials, as taken from trade journals for six months ending March 1, 1937, to which 20 percent has been added for overhead. When appropriate, an additional allowance has also been made for bags, labor, and transportation.

FERTILIZER TONNAGE

Tonnage of Mixed and Unmixed Fertilizers Sold in Massachusetts

	July 1, 1934, to July 1, 1935	July 1, 1935, to July 1, 1936	July 1, 1936, to July 1, 1937
Mixed fertilizers	42,912	43,682	48,527
Fertilizer chemicals and materials unmixed	18,711	19,165	24,004
Pulverized natural manures	1,585	1,634	1,743
Totals	63,208	64,481	74,274

There were 9,793 tons more fertilizer sold in the state in 1937 than during the previous year. The tonnage of mixed fertilizer was 4,845 more, and that of the fertilizer chemicals and unmixed materials was 4,839 more than for 1936. Pulverized manures showed an increase of 109 tons. Of the total tonnage sold, 65.33 percent was mixed fertilizer, 32.32 percent was unmixed materials, and 2.35 percent was dried and pulverized natural manures.

Plant Food Tonnage

	Nitrogen		Phosphoric Acid		Potash	
	1936	1937	1936	1937	1936	1937
Mixed fertilizers	2,238*	2,548*	3,727*	4,138*	3,097*	3,468*
Fertilizer chemicals and materials unmixed	1,386	1,579	1,667	2,376	672	821
Pulverized natural manures	35	36	25	26	47	44
Totals	3,659	4,163	5,419	6,540	3,816	4,333

* Does not include plant food tonnage of fertilizer mixed for special orders.

There were 2,142 more tons of plant food sold in the state than during 1936, of which 504 tons were nitrogen, 1,121 tons available phosphoric acid, and 517 tons potash.

There were 15,036 tons of plant food sold, of which 28 percent was nitrogen, 43 percent available phosphoric acid, and 29 percent potash. Mixed fertilizers furnished 67.5 percent of the plant food, chemicals and unmixed materials 31.8 percent, and pulverized manures 0.7 percent.

The three plant food elements were furnished in the following proportions by the mixed fertilizers and the unmixed materials, including the pulverized manures: nitrogen, 61 percent from mixed and 39 percent from unmixed; phosphoric acid, 63 percent from mixed and 37 percent from unmixed; potash, 80 percent from mixed and 20 percent from unmixed.

The tables present tonnage figures for one year, July 1, 1936, to July 1, 1937, for both mixed fertilizers and unmixed fertilizer materials. In case of the mixed fertilizers, the grade represents the plant food guarantee and is expressed in the order of nitrogen, available phosphoric acid, potash.

SUPERPHOSPHATE WITH POTASH

0-20-20	28	-	0-14-6	1	-
---------	----	---	--------	---	---

Of the 48,527 tons of complete fertilizer sold, 74 percent was furnished by 9 grades and 126 brands. Double- and multiple-strength grades totaled 3,267 tons and 36 brands, which was 851 tons more than during the previous year.

Of the mixed fertilizer sold, 98 percent contained 14 percent or over of available plant food.

There were 469 tons more of low-analysis (less than 14 percent available plant food) complete fertilizers sold than in 1936. The 5-3-5 grade, comprising 6 brands, furnished 71 percent of the tonnage of this class of goods.

In the following table are listed ten of the most popular grades of mixed fertilizer together with the tonnage of each sold in Massachusetts for the years 1936 and 1937.

1936		1937	
GRADE	Tonnage	GRADE	Tonnage
5-8-7	13,752	5-8-7	14,206
4-8-4	7,122	4-8-4	6,804
4-8-7	3,526	4-8-7	3,214
7-6-6	2,074	7-6-6	2,668
4-8-10	2,053	6-3-6	2,573
6-3-6	1,402	4-8-10	2,330
4-8-8	1,112	4-8-8	1,652
3-10-4	1,013	5-8-10	1,316
4-12-4	983	8-16-16	1,160
5-8-10	930	4-12-4	1,154

The following table shows how the tonnage sold in 1937 corresponds with the New England Standard Nine grades selected by the New England Agronomists in 1931.

NEW ENGLAND STANDARD NINE GRADES	Tonnage	Additional Tonnage from Grades Varying but 1% in One or More Plant Foods	Total
5-8-7	14,216 ^a	8,536 ^b	22,752
4-8-4	7,076 ^c	124	7,200
6-3-6	2,619 ^d	1,815	4,434
7-6-6	2,668	276	2,944
4-8-10	2,482 ^e	-	2,482
3-10-4	967	672	1,639
5-8-10	1,316	-	1,316
2-8-10	219 ^f	-	219
2-12-4	50	-	50
Totals	31,613	11,423	43,036

^a Including 10 tons of 10-16-14.

^b Including 1,160 tons of 8-16-16, 828 tons of 8-16-14, 269 tons of 12-16-12 and 2 tons of 10-18-12.

^c Including 258 tons of 5-10-5 and 14 tons of 15-30-15.

^d Including 26 tons of 10-5-10 and 20 tons of 8-4-8.

^e Including 152 tons of 8-16-20.

^f Including 142 tons of 4-16-20.

Of the total tonnage of mixed fertilizer sold in Massachusetts, 65 percent was from grades recommended by New England Agronomists to meet New England conditions, and 24 percent additional tonnage was from grades varying but one percent in one or more plant food elements from the grades thus recommended. Of the ten grades, including the multiple-strength mixtures, that have the highest tonnage (37,077 tons), all but four were among the New England Standard Nine. These six grades showed a total tonnage of 29,897.

Over 21 percent of the total tonnage of mixed fertilizer was from five grades not included in the New England Standard Nine. They are 4-8-7, 8-16-14, third largest tonnage sold; 4-8-8, 8-16-16, fourth largest; 4-12-4, 8-24-8, eighth largest; 6-3-7, eleventh largest; and 3-10-6, twelfth largest.

The tonnage of unmixed materials, as shown in the following table, was distributed as follows: nitrogen products, 36 percent; phosphoric acid products, 36 percent; potash products, 6 percent; tankage, fish, bone, nitrate of potash, Ammo-Phos, and wood ashes, 17 percent; and miscellaneous, 5 percent. Pulverized animal manures are not included.

Tonnage of Unmixed Fertilizing Materials

MATERIAL	Tonnage	Brands	MATERIAL	Tonnage	Brands

a Several analyses of the same brand have been averaged and recorded in the table as one analysis. Analyses of fertilizer left over from previous year not included.

Summary of Deficiencies in Mixed Fertilizers

	1935	1936	1937
Brands deficient in one element	42	61	77
Brands deficient in two elements	7	7	16
Brands deficient in three elements	2	2	2
Brands deficient in nitrogen	20	22	39
Brands deficient in available phosphoric acid	22	33	29
Brands deficient in potash	17	26	47
Brands deficient in magnesium oxide	3	0	0

Serious Commercial Shortages in Mixed Fertilizers

AMOUNT OF SHORTAGE PER TON	NUMBER OF BRANDS ACCORDING TO YEARS			
	1934	1935	1936	1937
More than \$5	1	1	none	1
Between \$4 and \$5	none	none	none	none
Between \$3 and \$4	none	1	1	none
Between \$2 and \$3	none	none	none	3
Between \$1 and \$2	1	2	none	3

Of the 296 brands analyzed, 202, or 68 percent, showed no deficiencies. Out of 910 plant food guarantees made, 87 percent were fully maintained.

The deficiency table shows the following statistics:

Deficiencies not exceeding $\frac{1}{4}$ of one percent, 74.

Deficiencies between $\frac{1}{4}$ and $\frac{1}{2}$ of one percent, 28.

Deficiencies between $\frac{1}{2}$ and $\frac{3}{4}$ of one percent, 3.

Deficiencies more than $\frac{3}{4}$ of one percent, 10.

Of the total number of guarantees of each element made, 13 percent of the nitrogen, 10 percent of the available phosphoric acid, and 16 percent of the potash were not met. Twenty-five of the 39 nitrogen deficiencies, 19 of the 29 available phosphoric acid deficiencies, and 30 of the 47 potash deficiencies did not exceed $\frac{1}{4}$ of one percent.

Compared with the 1936 inspection, there were 17 more shortages in nitrogen, 4 less in available phosphoric acid, and 21 more in potash.

In the case of those fertilizers which did not conform strictly to the guarantee, the discrepancies were of such a character as to make it evident that there was no intentional attempt at violation of the regulations.

Twelve firms have registered five or more brands of mixed fertilizers. On the basis of composition found by analysis as well as upon tonnage sold, the following table shows to what extent each manufacturer was successful in avoiding deficiencies in plant food guarantees in his mixtures. All but three of the twelve firms provided an average overrun in the three major plant food elements guaranteed, considered desirable in safe fertilizer practice.

Mixing Efficiency Table

MANUFACTURER	AVERAGE PERCENTAGE OF PLANT FOOD ABOVE OR BELOW THE MINIMUM GUARANTEE		
	Nitrogen	Available Phosphoric Acid	Potash
Acme Guano Co.	+ .21	— .14	+ .07
American Agricultural Chemical Co.	+ .02	+ .49	+ .02
Apothecaries Hall Co.	+ .30	+ .64	+ .34

Summary of Data on Acid and Basic Fertilizers

FERTILIZER TONNAGE TESTED					EXTENT OF ACIDITY OR BASICITY OF FERTILIZER SOLD, EXPRESSED IN TONS OF CALCIUM CARBONATE (CaCO ₃)				
	1934	1935	1936	1937		1934	1935	1936	1937
Acid	35,205	35,715	34,746	32,957	Acidity	4,812	3,840	3,826	3,596
Basic	4,523	6,967	8,393	14,377	Basicity	149	445	571	984
Total	39,728	42,682	43,139	47,334	Net acidity*	4,663	3,395	3,255	2,612
					Average acidity*	235	159	151	109

* The net acidity is the total amount of calcium carbonate, expressed in tons, which would be required to neutralize all the fertilizer tested.

The average acidity is the average amount of calcium carbonate, expressed in pounds, which would have to be added to each ton of mixed fertilizer to make neutral all of the fertilizer tested.

AVERAGE ANALYSIS OF MIXED FERTILIZERS*

	1934	1935		1936		1937	
	Found	Guaranteed	Found	Guaranteed	Found	Guaranteed	Found
Nitrogen	5.08	4.82	5.26	4.96	5.18	5.05	5.29
Available phosphoric acid	8.61	8.04	8.90	8.26	8.63	8.13	8.59
Potash	6.89	6.59	7.19	6.82	7.17	6.91	7.20

*Does not include fertilizer mixed for special orders.

During the past three years, the average guarantee of the mixed fertilizers has been higher each year than the preceding year, with the exception of the average guaranteed available phosphoric acid which is slightly lower in 1937. Nearly 2,000 tons more of the tobacco grades were sold in 1937 than during the previous year; and this, most likely, is the principal reason for the somewhat lower average phosphoric acid both found and guaranteed for 1937. The tobacco grades usually carry a phosphoric acid guarantee of about 3 percent.

Explanation of Tables of Analyses.

Guarantee. The plant food guarantee or the grade of each fertilizer is made a part of the trade name under the heading "Name of Manufacturer and Brand," and is expressed as nitrogen, available phosphoric acid and water soluble potash and in that order.

Commercial Shortages. In the table designated "Mixtures showing a commercial shortage of \$1 or more per ton," the column headed "Approximate commercial valuation per ton" gives the sum of the valuation of each plant food element computed from the analysis by use of the trade values adopted by the Massachusetts Fertilizer Control for 1937, which appear on a preceding page of the bulletin.

Under the heading "Approximate commercial shortage per ton" is shown the commercial valuation of the deficiencies or tests found below the guarantee after allowance is made for the value of overruns or tests above the guarantee.

Deficiencies are emphasized by boldface type.

Mixtures Substantially Complying with the Guarantee. In addition to the analysis of those fertilizers substantially complying with the guarantee, this table includes also those mixtures that are more or less out of balance; that is, having deficiencies in one or more plant food elements, but having overruns which largely offset the value of the deficiencies.

"Number of samples" indicates the number of samples included in the composite which was analyzed.

Inferior Nitrogen. The presence of inferior forms of organic nitrogen is indicated by footnotes.

Potash Forms. Wherever tests for chlorine showed a sufficient amount present to unite with all of the potash found, the source of the potash is designated as muriate. Wherever insufficient chlorine was found to account for all of the potash, it is evident that forms of potash other than muriate were used. In such cases, the figures under the sub-heading "As muriate" do not imply necessarily that muriate of potash was actually added to the mixture, but that chlorine was present, probably from impurities in the fertilizer chemicals, in amounts to account for the percentage of potash indicated. The balance of the potash found is listed under the sub-heading "In forms other than muriate" and may be derived from sulfate, nitrate, or carbonate, as the case may be.

a Average percentage of chlorine, .37%.

b Average percentage of chlorine, .36%.

c Average percentage of chlorine, .49%.

d Percentage of chlorine, .16%.

e Total potash.

f Not counting value of phosphoric acid or potash.

g Magnesium oxide, 13.26%; chlorine, 1.08%.

h Calcium oxide, 13.87%; magnesium oxide, 5.33%; moisture, 5.12%; insoluble matter, 17.63%.

i Calcium oxide, 29.36%; magnesium oxide, 3.56%; moisture, 24.55%; insoluble matter, 8.00%.

j Chlorine, .44%.

k Average tannage finer than 1/50 inch, 43.57%; coarser than 1/50 inch, 56.43%.

l Average bone finer than 1/50 inch, 70.12%; coarser than 1/50 inch, 29.88%.

m Average organic matter: sheep manure, 43.16%; sheep and goat manure, 33.80%; cattle manure

64.95%; poultry manure, 65.80%; poultry manure and peat, 51.13%.

Note: The average pound cost of nitrogen, phosphoric acid, and potash from all of the pulverized natural manures taken collectively would be as follows: nitrogen, 70 cents; phosphoric acid, 12 cents; potash, 11 cents.

Nitrogen Compounds

The chemicals and unmixed materials under this heading are valued chiefly for the nitrogen which they contain. Some of them, however, contain more than this one element; the nitrate of potash containing potash; the calcium nitrate and cyanamid containing lime; and the organic vegetable substances containing small quantities of phosphoric acid and potash, as will be noticed by a reference to the summary table on the previous page.

Brands showing a commercial shortage of one dollar or more per ton are listed by themselves, serious deficiencies being emphasized by boldface type.

The commercial shortages were as follows: a \$2.85; b \$3.75; c \$4.24; d \$2.25; e \$3.13; f \$2.94; g \$1.45; h \$1.22; i \$2.91.

Note: Deficiencies in the Consolidated Rendering Co.'s brands were confined to the 10-6.87 grade of tankage supplied the State institutions. The product was not manufactured by the Consolidated Rendering Co., but was bought on the market under a guarantee of nitrogen and phosphoric acid as indicated in the table. Assuming that the product was well up to the guarantee, deliveries were made without retesting. Proper rebates were made in all cases.

Colloidal Phosphate with Mineral Colloids

This product was first registered in Massachusetts in 1929 by the Natural Products Corp., Ocala, Florida, under the name of "Florida Phosphate with Colloidal Clay." Later in the same year the name was changed to "Colloidal Phosphate."

In 1930 it was registered as "Colloidal Phosphate" by the Colloidal Phosphate Sales Corp. of New England, located at 126 Newbury Street, Boston, Massachusetts. During 1930 two hundred eighty-two tons were sold in the state.

In 1931 it was registered by the Mardal Corp., 370 Lexington Avenue, New York City. No sales were recorded in Massachusetts during that year.

The following description of the product appears on page 51, Control Bulletin 51, published in 1929 by the Massachusetts Agricultural Experiment Station. This description is applicable to the present-day product, although it is claimed by the present promoters, Colloidal Products of America, Inc., Soil Builders, Inc. Branch, Orlando, Florida, that an attempt is now made to standardize the material so that it will run uniform in composition.

"This product is a low-analysis natural Florida phosphate known to the industry as 'pond phosphate,' a by-product in mining Florida rock phosphate. In the recovery of this Florida rock phosphate, water is used. The soft, finely divided phosphate, with more or less clay and silt, is washed into ponds or basins, the finer material separating more abundantly at points farthest from the washer. When the water evaporates, the very finely divided deposit remains, and this is the source of the product under discussion."

The material is lower in phosphorus and higher in iron and aluminum than the raw rock considered suitable for the manufacture of superphosphate. Its use as a fertilizer is therefore restricted at present to direct application to the soil. From a fertilizer standpoint it supplies only phosphorus — and that in the tricalcium, iron, and aluminum phosphate forms which are not readily available according to official methods of analysis.

In 1930 a vegetation pot test was conducted at this institution on some comparatively new phosphates, including Colloidal Phosphate. (Pages 54-63, Control Bulletin 54, Massachusetts Agricultural Experiment Station.) Briefly stated, there was but little difference between Colloidal Phosphate and finely ground rock phosphate, either in the dry matter yield or in the phosphoric acid recovered. In Series I where the minimum phosphoric acid ration was used, neither of these phosphates showed any average gain in dry matter yield over the no-phosphate pots. Based on phosphoric acid recovery, both of these raw mineral phosphates showed phosphoric acid availability amounting to about one-fourth that of superphosphate.

A comparison of the product sold in Massachusetts in 1930 with the product registered in 1937 is shown by the following analysis.

	1930 Percent	1937 Percent
Moisture	4.47	4.64
Total phosphoric acid	21.61	2.14
Available phosphoric acid in neutral citrate of ammonia solution21	2.88
Insoluble phosphoric acid in neutral citrate of ammonia solution	21.40	20.26
Water soluble potash	None	None
Total nitrogen03	.10
Total calcium oxide	25.34	24.23
Magnesium oxide	1.34	.62
Carbon dioxide	4.95	1.63
Iron oxide (Fe ₂ O ₃)	15.24	3.63
Aluminum oxide (Al ₂ O ₃)		14.75
Soluble sulfates		Trace
Chlorine	Trace	Trace
Insoluble matter	22.18	17.41

These analyses show the products to be quite similar in composition. Based upon the 1937 analysis we should judge that the actual composition of the product was about as follows:

	Percent
Magnesium carbonate ($MgCO_3$)	1.30
Calcium carbonate ($CaCO_3$)	2.18
Tri-calcium phosphate ($Ca_3(PO_4)_2$)	42.43
Aluminum phosphate ($AlPO_4$)	3.20
Iron phosphate ($FePO_4$)	3.95
Aluminum oxide (Al_2O_3)	13.41
Ferric oxide (Fe_2O_3)	1.54
Moisture	4.64
Organic and volatile matter	9.94
Insoluble matter, largely clay	17.41
Total	100.00

Wright's Plant Aid

Manufactured and registered by Wright Co., Old Bridge, N. J.

	Percent
Moisture	14.26
Organic matter	26.14
Total phosphoric acid57
Total potassium oxide23
Water soluble potassium oxide19
Total nitrogen	1.44
Ammoniacal nitrogen08
Nitrate nitrogen07
Water soluble organic nitrogen22
Water insoluble organic nitrogen	1.07
Activity of insoluble nitrogen by alkaline permanganate method	33.40*

* Indicates low grade quality: the passing mark by this method is 50. The product is used largely in planting shrubs and flowering plants.

Menderth

Manufactured by Menderth, Inc.

PLANT FOOD ELEMENTS	GUARANTEED	FOUND SOLUBLE IN STRONG HYDROCHLORIC ACID
Potassium oxide	3.00	1.52
Phosphoric acid13	.15
Calcium oxide	3.00	2.23
Magnesium oxide	2.00	2.46

NOTE: The product contained .08% water soluble potassium oxide and 73.82% insoluble matter. The commercial value of the plant food contained in one ton of the product, based upon its content of potash, phosphoric acid, calcium, and magnesium, soluble in strong hydrochloric acid, would be about \$1.75. Any potash, phosphoric acid, calcium or magnesium that may be present in the product in a form insoluble in strong hydrochloric acid would have little or no value.
